The grapes are carefully placed one on the side of the other, and are left there to dry for seven days; but the berries of those produced from scarified vines contain more watery parts, and want a fortnight to become perfectly dry. Should rain set in during this time, the whole crop will be lost, and thus the product of scarified grape-vines is more subject to destruction than the others.

The grapes are turned every other day. When they are completely dry, the berries are stripped off from the bunches by the hands; the former are separated from their peduncles with an extreme facility. The fruit is then placed on a sieve, through the holes of which fall down the impurities, while the currants remain on the sieve. In Patras, a kind of machine is in use, which throws the berries to one side and the impure matter to the other.

The fruit, when thus cleaned, is stored in large rooms, and accumulated there up to the ceiling. Then they adhere to each other, and when, after some time, they are removed for exportation, they are separated by hoeing.

Their appearance is still not very strong. If they are not wet, it is sufficient to rub them on the hands; but in a wet state they offer more difficulty in the manipulation. Importers often apply this experiment to ascertain whether the fruit has been damaged on the voyage. The currants are shipped in sacks, or more still in casks.

The Passoline pays one dime (10 per-cent.) tax, besides an export duty of six per-cent. when leaving the kingdom.

After this discourse on the Passoline, I shall say a few words about an analogous variety—the Sultanine.

It is not long ago since the Sultanine has been introduced into Greece, from Smyrna, but the grape succeeds there as well as in its native country. It resembles the Passoline by the absence of stones and by the fine aroma; it also requires the same humidity and the same irrigation as the Passoline.

But it differs from the latter variety by its not so dark and more brilliant yellow color, and by the not so spherical, but more oblong form of its berries. The latter are small, but have still double the width of the Passoline.

The Sultanine, in its green as well as in its dried state, is one of the most delicate grapes.

Should these experiments be made in any other country, it must be borne in mind that this can only be done in low, southern plains, as this variety, like the Corinthian grape, demands humidity and a steady warm temperature. The vignerons should also take care never to cut the shoots from which they expect fruit, because experience has taught, that such branches produce very little or no fruit at all. They have to be left growing, and only such branches should be cut that are not expected to bear fruit.

HISTORY OF THE VEGETABLE KINGDOM.

DISTRIBUTION OF PLANTS.

The distribution of all the various species of plants in the vegetable kingdom is a deeply interesting study, and one that the cultivator of the soil should make himself familiar with.

We have selected a series of data of the distribution of plants to show that many of the choicest of other parts of the world are now grown here in California, in the greatest luxuriance, so much so that we may almost realize that we are in the promised land.

If from the south of Russia we travel eastward into Asia, the appearance of the country will be found to undergo a very remarkable change. Approaching the northern shore of the Black sea, the soil becomes sandy, intermixed in places with sea shells impregnated with salt, and abounding in lakes of salt water. Such is the aspect of the celebrated steppes of Russia. From the low tract lying between the Black sea and the north of the Caspian, these sterile regions extend over a considerable part of central Asia. It has been conjectured that these steppes were once covered by the sea, and the limits of the ancient coast have even been assigned; but the observation can by no means be extended to the salt deserts in the north of Persia and in Independent Tartary.

The presence of salt, in any considerable quantity, is fatal to corn and most other vegetables; there are, however, certain plants to which it appears indispensable, and which have been, for that reason, called saline plants. The sugar cane and the cocoa nut tree are almost the only plants which flourish equally well when wetted with fresh water or with brine. From the ashes of these saline plants soda is obtained.

Immediately south of that salt plain which occupies the space between the Black sea and the north of the Caspian, is the chain of Mount Caucasus, a most interesting region, both on account of its natural beauties, and of its connection with the earliest authentic records of history. In the fruitful valleys of Curdistan, a Turkish province on the southern side of these mountains crowned with perpetual snow; and on the banks of the river Gihon (better known by its ancient name of Oxus,) which falls into the sea of Aral, on the east of the Caspian, are found whole thickets of lemon, pomegranate, pear, and cherry trees.—Every species of fruit cultivated in our gardens grows there apparently wild; but whether they are to be considered as truly natives of the soil, or as being the remains of very ancient gardens, is the more difficult to determine, as this is the spot which appears to have been first peopled by the descendants of Noah. The walnut and the peach we derive from Persia; the vine and the apricot from Armenia; the sweet cherry and the Spanish chestnut from Lesser Asia; from Syria the fig, the olive, and the mulberry. In the triumph of the Roman general Lucullus, after his return from the conquest of Pontus, about at a hundred years before the Christian era, was exhibited a cherry tree, loaded with fruit, a sight till then unknown to the inhabitants of Italy.—From the same regions we derive the hyacinth, the tulip, the iris, the ranunculus, and some other of our garden flowers, most of which appear to have been first brought into this country during the reign of Elizabeth. To this list may be added the horse chestnut, the lilac, the sweet jasmine, the melon, and the cucumber. That the melon and cucumber were raised in Egypt at a very remote period, appears from the complaints of the Israelites, when they murmured against Moses and Aaron in the wilderness. "We remember the fish," said they, "which we did eat in Egypt freely; the cucumbers, and the melons, and the leeks, and the onions, and the garlic".—And in another place they speak of some kinds of fruit now cultivated: "Wherefore have ye made us to come up out of Egypt, to bring us in unto this evil place? It is no place of seed, or of figs, or of vines, or of pomegranates, neither is there any water to drink"

The "wilderness" in which these complaints were uttered by the children of Israel, forms a part of that great sandy desert which bounds to the west the fruitful plain of the Euphrates, extending thence southward over a considerable part of Arabia. In this desert are still to be seen the ruins of Palmyra, supposed to be the city built by Solomon, and named by him Tadmor in the Wilderness. Between the desert and the Mediterranean sea is the "Land of Promise," bounded on the north by Mount Lebanon, still famed for its majestic cedars. The cedar of Lebanon, though now cultivated as an ornamental tree in many parts of the world, has not been found wild except in the mountain from which it derives its name. Again crossing the desert to the extremity of the Red sea, we find a narrow tract of cultivated country along its eastern shore, extending to Yemen the Happy, or Fertile Arabia, the country of balm, frankincense, and myrrh. From Arabia the balm tree was first carried to Judea, as Josephus assures, by the queen of Sheba, as a present to Solomon; where, being afterwards cultivated for the sake of its fragrant and medicinal juice, particularly on Mount Gilead, it acquired the name of balm of Gilead. Frankincense and myrrh also consists of the dried juices of trees: the same may be said of gum Arabic, which is procured from a species of mimosa, growing on both sides of the Read sea, as well as in Senegal, and other parts of Africa. The mimosa family is a very numerous one, all of them natives either of the tropical countries, or of the warmer part of the temperate zone. Some of them have the remarkable property of folding up and drooping their leaves at the approach of night, or when touched by any external object, whence they have attained the name of sensitive plants. All of them bear pods, like the pea family; but their blossoms are rather like those of the willow, consisting of little globes of yellow threads. Their leaves (when they produce leaves) are always finely divided, often as much so as those of the carrot, a circumstance which gives to these trees a very peculiar aspect; but a considerable proportion of the mimosas are, properly speaking, leafless, excepting when very young, or after having been injured. The leaf-stalk, however, remains, and assumes a flatted shape, having somewhat of a leaf-like appearance, but differing from a true leaf in its edge being turned towards the stem; its two sides are consequently similar, and perform the same functions with respect to the light. This is particularly the case with the mimosas of New Holland.

Returning to the neighbourhood of the Red sea, we find, on its eastern shores, the native country of the coffee-tree, which is an evergreen, fifteen or twenty feet high, bearing in the bosom of the leaves several white, sweet scented flowers, of the size of snowdrops. The flower is succeeded by a berry, containing two seeds: these seeds are coffee. In the neighbourhood of the Red sea is found also that species of cassia whose dried leaves are employed in medicine, under the name of senna, and the plant yielding bitter aloes, which must not be confounded with the American aloe cultivated in our greenhouses. Bitter aloes are brought chiefly from the island of Socotra, in the Arabian sea, near the straits of Babelmandel.

In the narrow, but fruitful valley of the Nile, we find several new vegetable productions.—Among the most remarkable of these is the papyrus, a species of reed which was employed by the Egyptians in early times for making paper.—For this purpose, the inner rind of the stem being cut into strips, and laid together somewhat like matting, was pressed with a weight till the whole adhered together. The papyrus is several feet in height, and bears a sort of tuft or feathery head at the top of the stalk: it grows chiefly in marshy places. In Egypt also grows a species of water lily, called the lotus, of which both the root and the seeds are eatable; and from Egypt was introduced into our gardens the mignonette. This country was once regarded as the granary of Europe, and is still remarkable for its fertility; producing large crops of rice, wheat, barley, and some other species of grain unknown among us; while oats are equally unknown in Egypt; the horses, as in all parts of the East, being fed upon barley.

It will scarcely be necessary to say any thing more of the plants peculiar to Africa, except to mention that its southern extremity (the Cape of Good Hope) has supplied us with a considerable portion of the most splendid flowers which ornament our greenhouses; particularly the geraniums, and the bulbous rooted plants, comprising the two families of *ixia* and *gladiolus*.

PRICKLY WINES.

We call prickly wines those which have somewhat turned, and show a slight taste of acidity.—A wine-grower in France writes us that he has applied successfully a plain method, which we have once before offered to our readers, and which we therefore shall willingly give again.

The remedy consists plainly in placing on the bung of the cask a loaf of hot bread just as it comes from the oven; but not quite as well done as bread which we eat.

Our friend states that the approximative quantity is one-half kilogramme to 200 litres of wine, *i. e.*, one and one quarter pound to 55 American gallons; a hole is made through the crust at the bottom of the loaf, and the latter is then placed on the cask so that the hole in the bread fits exactly with the bunghole, and the wine is cured; however, we are at a loss to give an explanation of the process.

The cask must be left quietly in this position untouched, and the drawing-cock should not be turned for at least forty eight hours.

Such cask of prickly wine, *piqué* or *absinthé*, as our friend calls it, often is overlooked by the cellar-master; but the plain and dangerless operation should be applied to any cask that shows the slightest touch of acidity, and sometimes great losses may be prevented by it.—*Wine and Fruit Reporter.*

ON A FAITHFUL BOOK-KEEPER. Posted up.

SERICULTURE IN AMERICA.

The history of sericulture in America, though antedating the Revolutionary War in its origin, may be summed up in a very few words.

"The culture of the mulberry-tree in Virginia was encouraged by James I., and the coronation robe of Charles II. was spun from Virginia silk.—Silk husbandry was introduced at an early day into Louisiana, and a state robe was made from Georgia silk in 1735 for Queen Caroline. In 1749 the export of cocoons was 1000 pounds, and in 1766 it had reached 20,000 pounds. Afterward a decline resulted from the withdrawal of the government bounty.

"Pennsylvania and New Jersey about this time became interested in the business, and Dr. Franklin, in 1770, sent seeds, mulberry cuttings, and silkworms' eggs for distribution. A silk manufactory was established in Philadelphia in 1771, which received cocoons for several years. A court dress of silk from cocoons of Lancaster County was acknowledged with a present of lands. New Jersey planted mulberry groves extensively, and New York made similar experiments. Connecticut and Massachusetts led this interest in the Eastern States. The Revolutionary War put an end to all these enterprises.

"In the revival of industry at the commencement of this century renewed efforts to establish the silk business are observed. In 1819 five tons of raw material were produced in Mansfield, Connecticut. In 1842 the New York State prison at Auburn produced $13,000 worth of sewing-silk.—In 1840 the total domestic product of silk was 60,000 pounds, valued at $250,000; in 1844, 400,000 pounds, worth $1,500,000; and in 1850 only 14,673 pounds. In 1860, Connecticut, New Jersey Massachusetts, Pennsylvania, and New York produced $5,000,000 worth of sewing silk, some silk stuffs, ladies' trimmings and other goods. Philadelphia and New York manufactured about $2,300,000 of these articles annually. The business, in all its branches, has greatly increased since 1860."

Mr. Prevost, one of our most successful silk growers, expresses the opinion that California, owing to the mildness and dryness of its climate, is better adapted to the culture of the silk worm than any other country in the world. This opinion is strengthened by the fact that the cocoons of California were among the finest exhibited at the French Exposition. Utah Territory, he thinks, is also admirably adapted to silk culture, and mentions the fact that Brigham Young, with his usual sagacity, has already planted out one hundred and sixty acres in mulberry trees.

From these observations, and from the fact that recent experiments seem to indicate that the osage orange may be substituted successfully for the mulberry, it is sincerely to be hoped that, while sericulture, owing to the disease among the silk worms, is declining in Europe, it may so enlist the services of our scientific as well as practical men as to become at no distant day one of the most profitable branches of our agricultural industry.

[The above article we find in Harper's Magazine for April, by O. M. Spencer. This brief sketch will give facts entirely new to many of our sericulturists, and should interest them, as many even now have no knowledge of the early history of silk growing, or that the crowned heads of Europe were ever robed in silks from the United States.

We are glad to see the proper notice of the lamented Prevost, now that he is gone from us, his work will be remembered and duly appreciated.

As a *new* Silk Manufacturing Company has been formed, we hope an *impetus* will be given to this source of wealth to our State.—ED F.]

COFFEE.

Brazil is the greatest producer of coffee. That known in the trade as Rio, is a Brazilian coffee. Of the 713,000,000 pounds produced by the world, per annum, Brazil furnishes 400,000,000, or more than half of the whole. Java 140,000; Ceylon, 40,000; St. Domingo, 40,000,000; Cuba and Porto Rico, 25,000,000; Venezuela, 25,000,000; Sumatra, 25,000; all others, including the Mocha, 18,000. The United States is the greatest consumer. We use nearly one-third of all the coffee consumed in the world,—using nearly seven times as much as Great Britain, with a population not very far from the same. Germany comes next.

A DAIRY TO BOAST OF.

The *St Alaban* (Vt.) *Messenger* says: "Mr. Nahum Bridgham, of Bakersfield, from 15 cows, made, during the dairy season just closed, 60 tubs, or 3,000 lbs. of butter. He sold it for 45 cents a pound, realizing $1,350. He also raised 10 calves, now worth $100, and 1,000 lbs. of pork, which he sold for $130—making, as the proper income of the dairy, $1,280, besides supplying his family.—He is now making butter at the rate of one tub a week

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWELVE.

IRRIGATION—MEANS AND ENDS.

While few can have failed to realize the important part played by water in the economy of vegetation, I judge that the question—"How can I secure to my growing plants a sufficiency of moisture at all times?"—has not always presented itself to the Farmer's mind as demanding of him a practical solution. To rid his soil and keep it free of superfluous, but especially of stagnant water, he may or may not accept as a necessity; but that, having provided for draining away whatever is excessive, he should turn a short corner and begin at once to provide that water shall be supplied to his fields and plants whenever they may need it, he is often slow to apprehend. Yet this provision is but the counterpart and complement of the other.

I had sped across Europe to Venice, and noted with interest the admirable, effective irrigation of the great plain of Lombardy, before I could call any land my own. I saw there a region perhaps thirty miles wide by one hundred and fifty, along the east bank of the Po, rising very gently thence to the foot of the Austrian Alps, which Providence seems to have specially adapted to be improved by irrigation. The torrents of melted snow which in Spring leap and foam adown the southern face of the Alps, bringing with them the finer particles of soil, are suddenly arrested and form lakes (Garda, Maggiore, Como, etc.,) just as they emerge upon the plain. These lakes, slowly rising, often overflow their banks, with those of the small rivers that bear their waters westward to the Po: and this overflow was a natural source of abiding fertility. To dam these outlets, and thus control their currents, was a very simple and obvious device of long ago, and was probably begun by a very few individuals (if by more than one,) whose success incited emulation, until the present extensive and costly system of irrigating dams and canals was gradually developed. When I traversed Lombardy in July, 1851, the beds of streams naturally as large as the Pemigewasset, Batterkill, Canada Creek, or Humboldt, were utterly dry; the water which would naturally have flowed therein being wholly transferred to an irrigating canal (or to canals) often two or three miles distant. The reservoirs thus created were filled in Spring, when the streams were fullest and their water richest, and gradually drawn upon throughout the later growing season to cover the carefully leveled and graded fields on either side to the depth of an inch or two at a time. If any failed to be soon absorbed by the soil, it was drawn off as here superfluous, and added to the current employed to moisten and fertilize the field next below it; and so field after field was refreshed and enriched, to the husbandman's satisfaction and profit. It may be that the rich glades of English Lancashire bear heavier average crops; but those of Lombardy are rarely excelled on the globe.

Why should not our Atlantic slope have its Lombardy? Utah, Nevada, and California, exhibit raw, crude suggestions of such a system; but why should the irrigation of the New World be confined to regions where it is indispensable, when that of the Old is not? I know no good reason whatever for leaving an American field unirrigated where water to flow it at will can be had at a moderate cost.

When I first bought land (in 1858) I fully purposed to provide for irrigating my nearly level acres at will, and I constructed two dams across my upland stream with that view; but they were so badly planned that they went off in the flood caused by a tremendous rain the next Spring; and, though I rebuilt one of them, I submitted to a miscalculation which provided for taking the water, by means of a syphon, out of the pond at the top, and over the bank that rose fifteen or twenty feet above the surface of the water. Of course, air would work into the pipe after it had carried a stream unexceptionably for two or three days, and then the water would run no longer.—Had I taken it from the bottom of the pond through my dam, it would have run forever, (or so long as there was water covering its inlet in the pond;) but bad engineering flung me; and I have never since had the heart (or the means) to revise and correct its errors.

My next attempt was on a much humbler scale, and I engineered it myself. Toward the north end of my farm, the hill side which rises east of my lowland is broken by a swale or terrace, which gives me three or four acres of tolerably level upland, along the upper edge of which five or six springs, which never wholly fail, burst from the rocks above and unite to form a petty runnel, which dries up in pretty hot or dry weather, but which usually preserved a tiny stream to be lost in the swamp below. North of the gully cut down the lower hill side by this streamlet, the hill side of some three acres is quite steep, still partially wooded, and wholly devoted to pasturage.—Making a petty dam across this runnel at the top of the lower acclivity, I turned the stream aside, so that it should henceforth run along the crest of this lower hill, falling off gradually so as to secure a free current, and losing its contents at intervals through variable depressions in its lower bank. Dam and artificial watercourse together cost me $90, which was about twice what it should have been. That rude and petty contrivance has now been ten years in operation, and may have cost $5 per annum for oversight and repairs. Its effect has been to double the grass grown on the two acres it constantly irrigates, for which I paid $280, or more than thrice the cost of my irrigation. But more: my hill side, while it was well grassed in Spring, always gave out directly after the first dry, hot week; so that, when I most needed feed, it afforded none; its herbage being parched up and dead, and thus remaining till refreshed by generous rains. I judge therefore, that my irrigation has more than doubled the product of those two acres, and that these are likely to lose nothing in yield or value so long as that petty irrigating ditch shall be maintained.

MEASURE OF SUCCESSFUL FARMING.

"With all the pride which Americans feel in witnessing the improvements of this country in most respects, it is a source of mortification that in almost every portion of our fair land the soil is yearly growing less productive. We are talking of 'worn out lands' in regions where men are now living who witnessed their first settlement, and where the perishable structures of the pioneers still remain. We are sending wheat to towns that were, in our colonial days, the granaries both of our own and of foreign nations; and unless the aristocratic Virginian is content to smoke tobacco inferior to that in which his ancestor indulged, it is certain that he must receive his supply of the cherished narcotic from beyond the borders of the Old Dominion.

"The cause of the diminution of the material wealth of the country, lies in the fact that we are annually sending away from the land, with each successive harvest, those things on which the soil is dependent for its fertility. We all know that wheat is an exhaustive crop; that it robs the soil of its rich phosphates and several other salts that are essential to the growth of the plant which, more than any other, supplies the food for man.—Let us see what becomes of these essential elements of wheat growth. They are very largely found in the covering of the berry. This, we all know, in the great majority of cases, is separated from the whiter portions of the flour at mills situated at a distance from where the grain is produced. This bran or shorts are fed to cattle in large towns, and though some will find its way into village gardens, by far the larger portion is buried in pits, used in the place of soil for filling up places that are required to be raised, or taken out into bodies of water by means of boats or through sewers.

"Of the bran and shorts of wheat, and the entire portions of other grains that are fed to the stock on the farm, some, of course, is returned to the land, and shows its good effects in the crops that are produced from it. But the animals that are raised from them, as well as the dairy products derived from the milk so produced, are sent to distant markets. Even the bones of the animals that die from disease or accident, or are slaughtered for beef, are now eagerly collected, and find their way for the most part to foreign shores. To day the English wheat-fields and French vineyards are rejoicing in fertility derived from bones of animals raised in the valley of the Mississippi.

"Every year thousands of acres of land are put in flax, a crop that diminishes the productiveness of the soil for several successive seasons. The oil is expressed from the seed to be used in painting houses; but nearly all the oil-cake is sent across the sea. The proprietor of the largest linseed oil works in the West informed us recently that never over two per cent. of their oil-cake found a market in this country; the remainder goes to England. The English farmer buys this product of the flax mill, not altogether or principally because it is the cheapest food for dairy or beef stock, but because of the excellent character of the manure that is derived from it."—*Farm Journal.*

TURKEYS FOR HATCHING.

At any time of the year, turkeys, whether broody or not, can be taught to hatch. Low set, plump turkey hens should be used for hatching. To learn turkeys to hatch, a dozen wooden nest-eggs are placed in a nest, then put the turkey on the nest, have a box made of stakes that will just cover her, and keep her down on the nest for two or three days; at first she will try to get off the nest, but soon becomes reconciled to it, when fresh eggs are given her for the wooden ones.—Turkeys will continue to hatch without intermission from Spring till Fall, the chicks being taken away when hatched, and fresh eggs substituted.—Turkeys should be taken off their nest once in every two days to feed (or oftener), and the nest must be kept clean. When it is found that they will not eat, they must be crammed and watered. It will be found where a large number of fowls are raised, that turkeys are more profitable to do the hatching than chickens. About twenty to twenty-four eggs are placed under turkeys at one setting, and they do not break as many eggs as hens.

Kill the Grubs

A member of the Herkimer County (N. Y.) Farmers' Club, states that last spring he ploughed an old sod in which there was an immense number of grubs. He sowed upon three acres and three quarters, soon after ploughing, two bushels of coarse salt. This was dissolved by rain which came a day or two later. The ground was then thoroughly harrowed and planted to corn, about half a pint of leached ashes being placed with each hill. The yield was very large, and there was not the slightest injury by worms. He has no doubt that the crop would have been destroyed had there been no application of salt.

Three hundred Iowa merchants have resolved to use only silver change in their transactions.

WEAR OF FARM IMPLEMENTS.

When will we ever rest from our excessive haste and carelessness, and learn to do things *thoroughly?* An English exchange tells us that their wagons and implements last 25 years while ours do not last over five or ten. Where is the difference? Are our mechanics poorer, or are they too hasty, or do farmers fear to pay enough for first-class work?

"In America, everything in the way of implements and tools wears out very quickly; and harness, as well as every kind of leather or cloth, tears soon after it is new and very often afterward. When I was about 14 years old, I learned to hold plow with a low-handled wooden plow that my father had when he commenced farming, before I was born. And 15 years afterward this plow was still in existence, having had a new beam, and perhaps handles, too, in the time; but, being a very handy and favorite implement, it was kept in repair for the youngest plowboys to go with. He bought a winnowing machine by Couch, just after he was in business; and, although he had great quantities of grain to winnow (at least 6,000 or 7,000 bushels per year), and lent it to winnow thousands of bushels for other people, that machine made more than half its cost price after nearly thirty years of wear.

"Carts and wagons though constantly used, last a very long time in England, and almost everything on a farm is made to wear well; while in America they are chiefly made for sale, and will be in need of repair in a few days. Half the wagons and dung-carts in England are at least a quarter of a century old; and the same may be said of other implements; and an eighth of all the tools, etc., there, in existence, had their origin fifty years since. They are not taken better care of there than here, nor are they used less—but on the contrary, a great deal more; for there is as much plowing done on 500 acres of arable land in England as there is on 1,500 in America, and as much grain grown on 500 acres as there is on 3,000. So that the wear and tear in England does not take the effect it does here, because good wood and iron are used, and good work made."—*Farm, Stock and Poultry Journal.*

Diseases Among Poultry.

The ailments of fowls may generally be traced to a variable temperature, to irregular, injudicious feeding, or to their being kept on the ground which has become impure with their use of it. Judicious feeding, perfect cleanliness, and occasional removal to new ground, will, to a great extent, keep fowls healthy.

The Chinese raise the peanut for its oil only. This they use for cooking purposes and for illumination

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 29 9-100 per cent. For its nutritive properties to all stock and its adaptation to sudden changes of weather or over-driving it has no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and preserving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

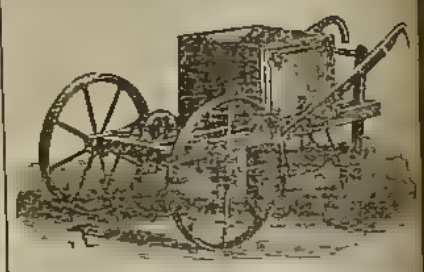
TRUE'S IMPROVED POTATO PLANTER,



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such pieces as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over ground that can be plowed

No intelligent farmer can see that machine with which one man can, with the aid of a boy, plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all SPRING and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Instrument, and a good Mechanic can make a fortune with it. Particulars and Catalogues can be had at our office

Extensive embellishments and improvements have been made. The additions will include an immense collection of BOTANY, ICHTHYOLOGY, and ENTOMOLOGY

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5, and 7 to 9 P. M. Admission

Horticulture.

CONVERTING DWARF TREES INTO STANDARDS.

The Dwarf Pear is admitted not to be the means of producing the highest success in pear growing. The only advantage the dwarf form possesses is a little earlier bearing and a great economy in space. Nearly all experienced horticulturists are now converting their dwarfs, as fast as Nature will aid them, into standards. This is done simply by planting the junction of the quince and pear stock sufficiently deep below the surface of the ground, to favor the formation of roots from the pear stock. It frequently happens that trees grown this way are far more successful than in any other, and their quality and size greatly improved. The Duchesse d'Angoulême Pear, grown as a standard from standard roots, is very inferior, both in size, quality and productiveness; but when grown as a standard from dwarf roots, its fruit is large, fair and very abundant.

We have seen trees that were productive as dwarfs for eight and ten years, but suddenly would shoot up tall, stout stems and branches, and grow quite vigorously. This is a good evidence that the pear roots have formed from the native stock, and hereafter the tree will be a low standard, growing on its own roots. During the first year or two the fruit will suffer a little, as the energies of the tree are bent on the formation of new wood, but this is soon rectified, the tree settles down into a healthy habit of growth, and a steady productiveness that makes the heart of every owner of a pear orchard happy every time he looks over it.

THE FLORA OF PENNSYLVANIA.

Professor T. C. Porter, of Lafayette College, and one of the most distinguished botanists of the country, has nearly-completed his elaborate description of the entire flora of Pennsylvania, embracing the forest trees, grasses and weeds injurious to cultivation, and also observations on the geographical range and their economic value. This is the result of more than twenty-five years of learned labor on the part of this eminent scholar, and he now offers the whole as a donation to the State. The Academy of Natural Sciences, of Philadelphia, lately passed a resolution urging the Legislature to publish it, and the State Agricultural Convention seconded the report.

FRENCH METHOD OF RAISING TOMATOES.

As soon as a cluster of flowers are visible, the stem is topped down to the cluster, so that the flowers terminate the stem. The effect is that the sap is immediately impelled into the two buds next below the cluster, which soon push strongly and produce another cluster of flowers each.—When these are visible, the branch to which they belong to are also topped down to their level, and this is done successively. By this means the plants become stout dwarf bushes, not above eighteen inches high. In order to prevent their falling over, sticks or strings are stretched horizontally along the rows, so as to keep the plants erect. In addition to this, all the laterals that have no flowers, and after the fifth topping, all laterals whatsoever are nipped off. In this way the ripe sap is directed into the fruit, which acquires a beauty, size and excellence unattained by other means.

GROWING ASPARAGUS.

The introduction of the new variety, "Conover's Colossal," is destined to work a radical change in asparagus culture for the future. Hitherto gardeners have been accustomed to plant in rows two feet apart, with plants one foot in the rows. The new variety, "Conover's Colossal," should be planted in rows four feet apart and three feet in rows, thus practically introducing the system of [illegible]stead of rows, and reducing the culture to about the same as for corn, until the roots have spread and filled the whole ground, and the stools have become large enough to occupy the entire space. The new method is certainly the most economical in manure and labor, and original cost of plants.

COST OF OSAGE ORANGE HEDGE

A farmer in Missouri has made a calculation as to the cost of the different modes of fencing, and found that the Osage Orange was the cheapest and most durable. He gives the cost of 100 rods of Osage Orange fencing, planting and cultivating same for three years, which is $23. The cost of fencing with rails, 100 rods, is $68; with post and plank, $220, thus showing the cheapness of the Osage Orange. He says he has an Osage Orange three years old that would turn stock.

NURSERYMEN, SEEDSMEN, ETC.

Now is the time to make known your business. Never wait until the season has arrived to plant before you inform your purchasers what you have to sell, but let them know months in advance, and wake them up to the trial of all that is new and valuable to plant and cultivate.

Nurserymen and Seedsmen abroad should bear in mind that here in CALIFORNIA we have a Perpetual Season, and trees plenty, and vines are planted all the year round.

Seedsmen should also know that our market Gardeners are always planting, and therefore always purchasing seeds to a greater or less extent.

TO THE PUBLIC!!!

THE

SAN FRANCISCO

PACKAGE EXPRESS

COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYing Passengers, Baggage, Packages, and Parcels from the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system presents itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and Boats and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. Package Express Company,"

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed.

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops, Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

GOLDEN EAGLE HOTEL.

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will alway be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly [illegible] during the past year, to more than double its former size, with splendid suite of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

D. E. CALLAHAN,

23-1 [illegible] PROPRIETOR

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING APRIL, 7th., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for *one* insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their special attention.]

Every Farmer should read Horace Greeley's Essays.

THE MINER.

The story of "Bishop Haito" is a good lesson for those who with a misers grasp speculate in the "staff of life" while the poor are starving.

JENNY DARE AND WOMAN SUFFRAGE.

This question is propounded to us by our correspondent, Jenny Dare, and we can promptly define our position.

We believe in giving to WOMAN all the rights and privileges that she can properly use, and would allow her to occupy any place or position in life or society that her talent and education fit her to adorn, or use and occupy, with credit to herself and benefit to her fellow creatures—there, Jenny, are we now plain enough? "Nelly" has written you fully.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

NURSERY MATERIALS

We have received from F. Trowbrige, of Milford, Conn., samples of his oil packing paper for encasing plants by mail, also of his grafting wax. Both articles very excellent for nurserymen, such all should have for their business. See advertisment in our colums.

BOOKS.

How Crops Feed. — This book is the answer to one by the same able author, Prof. Sam'l W. Johnson, the distinguished Professor of Chemistry in the scientific school of Yale College and other institutions. A former book, "How Crops grow," a work every farmer should have, has in this book the solution of "How Crops Feed," both containing many valuable truths, which very few of our farmers understand, but which, if they did, would make their pokets heavier, and their farms better. Messrs. A. Roman & Co. have these books. Published by Orange, Judd & Co., N. Y.

Journal of Social Science. — Transactions No. 2, of the American Association. This volume contains valuable essays on Immigration with interesting statistics worthy consideration of our Emigrant Associations here, with other valuable matter. A. Roman & Co.

REPORT OF INDUSTRIAL FAIR.

We have Report of the Seventh Industrial Exhibition of the Mechanic's Institute. This volume contains full reports of receipts and expenditures, and all articles exhibited, with reports, premiums, etc., etc. Is very interesting to all contributors and all persons interested in the progress of our industries.

PORCUPINELLA

This is a new magazine, Vol. 1, No. 1—and the title indicates a *Funny Magazine*: Comical, Sarcastical, Quizzical, Farcical and Tragical, and we suppose, the *Logical* and *General Editorial* of No. 2 would like to say, we said, his new magazine was Cap-i-tal.

MARYLAND WOOL.

We are indebted to some kind friend for a card of handsome samples of wool, for which we return thanks.

LEGAL DIVORCES.

ABSOLUTE DIVORCES legally obtained in New York, Indiana, Illinois and other States, for persons from any State or Country, legal everywhere; desertion, drunkenness, non-support, etc., sufficient cause; no publicity; no charge until divorce obtained. Advice free. Business established fifteen years.

Address, M. HOUSE, Attorney,
No 78 Nassau Street, New York City.

THE SEASONS.

A series of cold weather has checked many kinds of vegetation and kept back many kinds of Fruit-trees, but all for the best. What frosts we have had have done no severe injury, while the repeated rains have proved of incalculable benefit, giving a promise of an unprecedented crop of cereals the present year.

Our Fruit trees all look well, and give good promise. The frost that was supposed to have done injury has taken off the redundancy of blossoms, and the balance of the fruit will be better.

The Grain crops everywhere are forward and very heavy. In some places, in small lots around orchards, etc., the scythe has been at work, and even Barley and Oats have been cut for early feed.

The Strawberries of Santa Clara Valley, once reported to have been all killed by frost, are now in a prosperous condition and will yield well, and many a table will be loaded this year from these once-ruined plantations. How strange it is that newspapers can so easily kill off all the Stock, dry up all our Grain fields, and frost-kill all our Gardens! But how quickly Nature shows that these unnatural stories and sensational paragraphs, from ignorant "penny-a-liners" don't amount to much after all—only showing the ignorance of these hired reporters, who do but little, and what they undertake to do is only *guess-work*.

The present season bids fair to be one of the most prosperous that California has ever yet had for her benefit. The whole country has donned its blossoms and its vernal robes, and never looked more beautiful than now. The reports from every section of our State are full of promise,—enough so to make all hearts glad.

As we said in our last issue, now is the time to visit the country; now is the time to reinvigorate the body and mind by inhaling the fresh breath of Spring, and enjoying the most beautiful season of the year; and, now that the facilities are so great for traveling, so speedy, and so safe and cheap also, all that can leave our crowded City should do so, and hie to the country and enjoy it while the blossoming season lasts.

THE NEW HARVESTER

The old saying, "It beats the world," will not apply now to Harvesting Machines, to Reapers and Mowers, if what we have heard and seen are realities, and if we are to believe our eyes and ears, then we have a wonderful Reaper and Mower in the NEW COMBA for public favor, a new harvester, bearing the name of "THE WORLD."

We were recently invited to the warehouse of Mess. Linforth, Kellogg & Co, on Front Str., to examine the model of "The World," and from the sole testimony of its great excellence, it is said to be in its *mechanical* construction *without a rival*.

The working part of this wonderful machinery is all enclosed in a cast iron body or frame, completely enclosing all the running gear. This machinery, the working gear, all the cogs and wheels or cut gear, finished up like the runing gear of a watch, and this is all enclosed within this iron body, which forms the frame work of the machine.

This body is opened by a hinged cover, where the working gear is seen. By this means of protection no water, sand, grass or dirt can ever touch the working gear; the case is as close as a watch. This gearing being cut, works so perfectly that it never gets out of order.

"The world" is truly a very wonderful machine and worthy the attention of our harvesters.

The model of this machine is now at Messrs. Leforth, Kellogg & Co., who have the sole agency for this Coast, and who will take a pleasure in showing this model to our harvesters.

The machines are soon expected over the rail road, and will be here ready for the present harvest season.

We shall speak again of this NEW MACHINE.

PACKING AND SHIPPING FRUIT EAST.

The severe losses made last year by those who, without experience or judgment sent fruit to the Eastern States on speculation, has taught a lesson that we hope will be of practical benefit to our State.

The present week we were favored by a call from V. S. Platt, Esq., of Chicago, a gentleman of long experience in fruit packing and shipping, and to whom large amounts of fruits were shipped from here last season.

Mr. Platt is now on a visit to our several orchardists to furnish information of the best way to ship fruit East, and our fruit growers would do well to see Mr. Platt while he is with us; they can make arrangements with him that will be advantageous to themselves as well as to our State.

POTATOE PLANTING.

Now that the late frosts have gone, there never was a better time to plant Potatoes, let the soil be plowed deep and fine, and a sure crop awaits the planter.

The "Early Rose," planted in January have already been matured, we have seen good size "Early Rose," that was planted as late as Jan. 12th, and there can be no doubt but that the "Early Rose" planted now, will make two crops the present season—and two good crops—there is no Potatoe grown so sure as the "Early Rose."

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Neural History Insectal, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

RATIFICATION OF THE FIFTEENTH AMENDMENT.

PROCLAMATION BY PRESIDENT GRANT.

To the Senate and House of Representatives: It is unusual to notify the two Houses of Congress, by message, of the promulgation by proclamation of the Secretary of State, of the ratification of a Constitutional Amendment. In view, however, of the vast importance of the Fifteenth Amendment to the Constitution, this day declared a part of that revered instrument, I deem a departure from the usual custom justifiable. A measure which makes at once four millions of people voters, who were heretofore declared by the highest tribunal in the land not citizens of the United States, not eligible to become so, with the assertion at the time of the Declaration of Independence, the opinion was fixed and universal in the civilized portion of the white race, and regarded as an axiom in morals as well as in politics, that the black man had no rights which white men were bound to respect, is indeed a measure of grander importance than any other act of the kind from the foundation of our free Government to the present time. Institutions like ours, in which all power is derived directly from the people, must mainly depend upon their intelligence, patriotism, and industry. I call the attention, therefore, of the newly enfranchised race to the importance of their striving in every honorable manner to make themselves worthy of their new privilege.

To the race more favored heretofore by our laws, I would say: Withhold no legal privilege of advancement to the new citizens. The framers of our Constitution firmly believed that a republican form of government could not endure without intelligence and education generally diffused among the people. The Father of his Country, in his Farewell Address, used this language: "Promote, then, as a matter of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of the Government gives force to public opinion, it is essential that public opinion should be enlightened.

In his first annual message to Congress, the same views were forcibly presented, and were again urged in his eighth message. I repeat that the adoption of the Fifteenth Amendment to the Constitution completed the greatest civil change, and constitutes the most important event that has occurred since the nation came into life.

The change will be beneficial in proportion to the heed given to the urgent recommendations of Washington. If these recommendations were important then, with a population of but a few millions, how much more important now, with a population of forty millions, and increasing in a rapid ratio. I would, therefore, call upon Congress to take all means within their constitutional power to promote and encourage popular education throughout the country, and upon the people everywhere to see to it that all who possess and exercise political rights shall have the opportunity to acquire knowledge which will make their share in the government a blessing, and not a danger. By such means only can the benefits contemplated by this amendment be secured.

[Signed,] U. S. GRANT.

EXECUTIVE MANSION, March 30, 1870.

HAMILTON FISH,
Secretary of State of the United States.

THE PROCLAMATION.

To all whom these presents may come, greeting: Know ye that the Congress of the United States, on or about the 27th day of February, in the year 1869, passed a resolution in the words and figures following, to wit:

A Resolution proposing an Amendment to the Constitution of the United States.

Resolved, By the Senate and House of Representatives of the United States of America, in Congress assembled, two-thirds of both Houses concurring, that the following article proposed to the Legislature of the several States, as an amendment to the Constitution of the United States, which, when ratified by three-fourths of said Legislatures, shall be valid as part of the Constitution, namely:

Art 15, Sec. 1.—The rights of citizens of the United States to vote shall not be denied or abridged by the United States, or any State, on account of race, color, or previous condition of servitude.

"Sec. 1.—Congress shall have power to enforce this article by appropriate legislation."

And further, That it appears from official documents on file in this department, that the amendment to the Constitution of the United States, proposed as aforesaid, has been ratified by the Legislatures of the States of North Carolina, West Virginia, Massachusetts, Wisconsin, Maine, Louisiana, Michigan, South Carolina, Pennsylvania, Arkansas, Connecticut, Florida, Illinois, Iowa, Indiana, New York, New Hampshire, Nevada, Vermont, Missouri, Virginia, Alabama, Kansas, Mississippi, Minnesota, Ohio, Rhode Island, Nebraska, and Texas, in all 29 States; and further, that the States whose Legislatures have so ratified said amendment, constitute three-fourths of the whole number of States in the United States; and further, that it appears from an official document on file in this department, that the Legislature of the State of New York has since passed resolutions claiming to withdraw said ratification of said amendment, which had been made by the Legislature of that State, and of which official notice had been filed in this department; and further, that it appears from an official document on file in this department, that the Legislature of Georgia has, by resolution, ratified said proposed amendment.

Now therefore, Be it known, that I, Hamilton Fish, Secretary of State of the United States, by virtue and in pursuance of the second section of the Act of Congress approved on the 20th day of April, in the year 1818, entitled, "An Act to provide for the publication of the laws of the United States, and for other purposes," do hereby certify that the amendment aforesaid has become valid to all intents and purposes as a part of the Constitution of the United States.

In testimony whereof, I have hereunto set my hand, and caused the seal of the Department of State to be affixed.

Done at the city of Washington, this 30th day of March, in the year of our Lord one thousand eight hundred and seventy, and of the Independence of the United States the ninety-fourth.

[Signed.] HAMILTON FISH.

TROUT CULTURE.

It is only lately that the culture of fish has claimed the attention of our people. The importance of the art has long been recognized abroad, but in our own country the government has been slow to move in the matter, although the supply of fish food is daily decreasing. Still individual enterprise here will need no aid from government, except in the matter of stocking and protecting streams which an individual cannot control. The importance of fish as food, and their cheapness, render it a matter of great importance that the supply shall not be diminished, but very much increased. This can be done in no way so well and so quickly as by artificial breeding. By this means, fish can be raised as well as any other stock, and made so cheap that the poorest in our land can have abundance of good and nourishing food. I do not refer to Trout alone. The attention of individuals working for profit has naturally been given to the highest priced fish; but the experience obtained in Trout raising will lead, and is even now leading, the way to the production of all other kinds. The time will come and come soon, when our rivers, lakes and streams will be abundantly stocked with those fish to which they are best adapted. For the lakes, the Whitefish, Salmon Trout, Herring, Black Bass and Wall-eyed Pike; for the rivers, the Yellow Pike, Black Bass, Shad and Salmon; for still and deep streams, the Bullhead or Catfish, the Perch and many other kinds of coarse fish; for the swift mountain stream, the Trout. Even Gold Fish, which are a good coarse pan fish, can be made to abound in all our rivers and bays. It has been proved beyond a doubt, that with very little care and expense these fish can be made to abound in all our waters. But this requires government aid, since individuals owing parts of streams will not hatch out fish there at their own expense for the benefit of all other owners of the stream. Besides this, special legislation seems to be required to get fish-passes constructed over the numerous dams in our rivers and to prevent substances destructive to the fish being thrown into our streams, such as saw-dust and the refuse of paper mills, tanneries, dyeing establishments, etc., etc.

TROUT PONDS.

LOCATION.—It is very easy with good spring water to raise a *few* trout anywhere in temperate or in mild latitudes. But to raise a large number requires care in the selection of a location. Plenty of pure spring water is the first and most essential requisite. The spring, or one of the springs, if there are several, should have a fall of two or three feet, and a fall of five to ten feet of the whole volume of water is decidedly advantageous. If the supply of water is very large, it diminishes the necessity of a fall. The water from a spring remains (near its source) at nearly the same temperature during the whole year, and is the best for Trout raising. The water from a brook which does not rise higher than sixty-five degrees in summer, may be used to supply ponds for adult Trout; but spring water is absolutely necessary for hatching purposes. It is not a good plan to dam up a stream which varies in volume, and so make ponds. There should be enough level land by the side of such a stream; and it is best to have a stream much greater in volume than is necessary for the ponds, so that there will always be a good supply of water, and will be no trouble with the surplus water after a freshet. A good knowledge of the whole system of Trout Culture is essential in choosing the very best location. It is best to have your ponds near your house, or have a man in charge living at the ponds. Of course your Trout may never be molested, but "an ounce of prevention is worth a pound of cure."—[From Seth Green's New Book.]

WONDERFUL DISCOVERY!

GRAPES.

"In all places where the hot dry breath of constant drouth prevails through the summer, grapes are small but very sweet. Where a surplus of moisture and cool winds prevail, they are sour and mildew. I am constrained to think that the sunny slopes of the hills, through the eastern part of Alameda County, are admirably adapted to the culture of the grape."

We find in the *Mining and Scientific Press* of our city, this most-wonderful discovery relative to the culture of the Grape. Its very lucid (?) description of the causes of the sweetness and acidity found in wine, should entitle the writer to a professorship in our Agricultural College!

Wonder if the hills of Eldorado County or any other county are not as free from the cold seabreezes as Alameda County, and equally as sunny?

A friend near our elbow says, "I am constrained' to believe the writer is interested in homestead lots in Alameda County."

A Doctor detained in Court as a witness, complained to the Judge, that if he was kept from his patients they might recover in his absence.

THE FIRST AMERICAN FLAG—WHEN AND WHERE IT WAS MADE.

At a recent meeting of the Pennsylvania Historical Society, William J. Canby, Esq., read an essay upon "The American Flag." He discovered, in tracing the history of this National Emblem, that the first instances when the Stars and Stripes were unfurled, were at the siege of Fort Schuyler August 17, 1777, and upon an occasion just about one year prior to that time; the brig Nancy was chartered by the Continental Congress to procure military stores in the West Indies, during the latter part of 1775. While at Porto Rico, in July of the ensuing year, the information came that the colonies had declared their independence, and with this information came the description of the flag that had been accepted as the national banner. A young man, Captain Thomas Mandeville, set to work to make one, and successfully accomplished it. The flag was unfurled and saluted with thirteen guns. When the brig Nancy was upon her return voyage she was hemmed in by British vessels off Cape May. Her officers succeeded in removing all the munitions to the shore, and when the last boat put off, a young man named John Hancock, jumped into the sea, swam to the vessel, ran up the shrouds to the head of the mast and securing the flag, brought it triumphantly to the shore, through a hot fire from the British men-of-war.

The first American flag, however, according to the design and approval of Congress, was made by Mrs. Elizabeth Ross. Three of her daughters still live in our vicinity to confirm this fact—founding their belief, not upon what they saw, for it was made many years before they were born, but upon what their mother had often told them. A niece of this lady, Mrs. Margaret Boggs, aged ninety-five years, now lives in Germantown, and is conversant with the fact. The fact is not generally know that to Philadelphia not only belongs the honor of flinging the first Star Spangled Banner to the breeze, but to a Philadelphia Lady belongs the honor of having made it.

The house in which it was made still stands—No. 239 Arch street (the old number being 59)—the last of an old row. It is related that when Congress had decided upon the design Col. George Ross and General Washington, visited Mrs. Ross and asked her to make it. She said, "I don't know whether I can, but I'll try," and directly suggested to the gentlemen that the design was wrong, in that the stars were six-cornered and not five cornered as they should be. This was correct, she made the flag. Congress accepted it, and for a half a dozen years this lady furnished the Government with all its national flags, having of course a large assistance. This lady was also the wife of Claypole, one of the lineal descendants of Oliver Cromwell.

SPECIAL NOTICES.

We call the attention of our Harvesters to the advertisements of Messrs. Treadwell and Co., for the New and Valuable Machinery offered by them.

Also, to Messrs. Marcus C. Hawley and Co, who advertise Superior Machines and Valuable New Agricultural Implements.

Also the advertisement of Messrs. Arther and Son, for their famous Wagons, and other goods offered by them.

Our Farmers should make their purchases *early*, and thus they can select the Best.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every new subscriber to the CALIFORNIA FARMER, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this and they shall have the parcel mailed to them free.

THE PREVOST FUND.

The Committee of the Prevost Fund would respectfully invite all the friends of the late Louis Prevost—the PIONEER OF SERICICULTURE—to forward to them such contributions as they are disposed to make to this Fund; and it is to be hoped that those Journals over this coast that have always spoken so kindly of this most-worthy Pioneer, will present this matter to their readers and thus enable the Committee to carry out the plans designed for the Widow, and erect a suitable Testimonial to the Memory of Louis Prevost.

Contributions can be sent to the Treasurer, Judge D. S. Payne, San Jose; Heutsch and Boston, Bankers, San Francisco; CALIFORNIA FARMER Office, San Francisco.

At an early day the contributors will be invited to meet and arrange the disposition of the Fund that shall be raised.

RARE FLOWER SEEDS.

We have several fine collections of new and choice Flower Seeds from the well known Florist "Dreer" of Philadelphia, and James Vick of Rochester N. Y. Those who wish "Gems of Flora," will find them at our Office, No. 320 Clay Street.

SEEDS, PLANTS, ETC., BY MAIL.

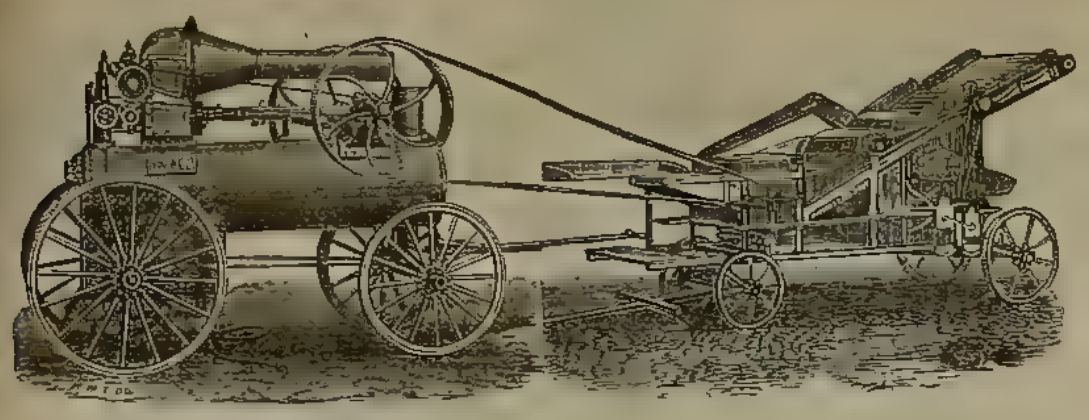
The following are the rates by Law:

For all parcels of *four ounces*	2 cts.
" " *eight ounces*	4 "
" *one pound parcels*	8 "
" *four pound* "	32 "

No parcels to be above *four pounds*.

All parcels should be carefully done up and sealed.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL MPROVEMENT YET MADE!

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS,—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs,—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

GENERAL AGENTS FOR THE PACIFIC COAST, Nos., 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

A FAMILY CIRCLE HOME.

The following beautiful home circle poem is founded upon an incident where a rich neighbor offered to make a poor family comfortable, and provide for the child, if one of seven were given to him.

"Which shall it be? Which shall it be?"
I looked at John—John looked at me.
(Dear, patient John, who loves me yet,
As well as though my locks were jet,)
And when I found that I must speak,
My voice seemed strangly low and weak;
"Tell me again what Robert said!"
And then I listening bent my head:
"This is his letter:—
'I will give
A house and land while you shall live,
If, in return, from out your seven,
One child to me for aye is given.'"
I looked at John's old garments worn,
I thought of all that John had borne
Of poverty, and work, and care,
Which I, though willing could not share;
I thought of seven months to feed,
Of seven little children's need,
And then of this:
"Come," John," said I,
"We'll choose among them as they lie
Asleep," so, walking hand in hand,
Dear John and I surveyed our band—
First to the cradle lightly stepped,
Where Lilian the baby slept,
A glory 'gainst the pillow white;
Softly the father stooped to lay
His rough hand down in loving way,
When dream or whisper made her stir,
And hushily he said:—"Not her, not her."
We stooped beside the trundle bed,
And one long ray of lamplight shed
Athwart the boyish faces there,
In sleep so pitiful and fair;
I saw on Jamie's rough, red cheek,
A tear undried. Ere John could speak,
"He's but a baby, too," said I,
And kissed him as we hurried by.
Pale, patient Robbie's angel face
Still in his sleep bore suffering's trace.
"No, for a thousand crowns, not him,"
He whispered, while our eyes were dim;
Poor Dick! bad Dick! our wayward son,
Turbulent, reckless, idle one—
Could he be spared? "Nay, He who gave
Bid us befriend him to the grave;
Only a mother's heart can be
Patient enough for such as he.
And so," said John, "I would not dare
To send him from her bedside prayer."
Then stole we softly up above
And knelt by Mary, child of love,
"Perhaps for her 'twould better be,"
I said to John. Quite silently
He lifted up a curl that lay
Across her cheek in wilful way,
And shook his head, "Nay, love, not thee."
The while my heart beat audibly,
Only one more, our eldest lad,
Trusty and truthful, good and glad—
So like his father. "No, John, no—
I cannot, will not, let him go."
And so we wrote, in corteous way,
We would not drive one child away;
And afterward toil lighter seemed.
Thinking of that of which we dreamed,
Happy in truth that not one face
We missed from his accustomed place;
Thankful to work for the seven,
Trusting the rest to one in Heaven."

SUCCESSFUL FARMING.

We give the following example of industry as applied to *Farming*, which is specially worthy the attention and imitation of the young farmers of California.

This is an example where the farmer applied himself to his business of farming, and did not dabble in *outside speculation*. It is an example of "Farming to Profit."

John P. Gager, Jr., of Scotland, St., writes to the Norwich *Advertiser* in illustration of what industry and economy will do on a farm. He says: "I commenced farming twenty-seven years ago, with a capital of $250, which I earned by working by the month for $11 per month. I hired a farm and hired a house-keeper for a year and a half. I then married one of the best housekeepers in New London county. From that time to the present we have attended strictly to farming, and we are now owners of two large farms, a saw mill, shingle mill and grist mill, with a run of custom from ten to twelve thousand bushels a year. We have a number of thousand dollars in bank stock, and about one thousand dollars' worth of produce on hand. This has been accumulated by attending strictly to farming, without any outside speculation. I say this to encourage young men to turn their attention more particularly to farming.

A Mother's Influence

A man finds he cannot make his way in the world without honesty and industry, so that, although his father's example may do much, he has to depend upon his own exertions. He must work, he must be honest, or he cannot attain to any enviable rank. But the tender soothings of a mother, her sympathy, her devotedness, her forgiving temper—all this sinks deep in a child's heart; and let him wander ever so wide, let him err, or let him lead a life of virtue, the remembrance of all this comes like a holy calm over his heart, and he weeps that he has offended her, or he rejoices that he has listened to her disinterested, gentle admonition.

DOMESTIC HELP.

One of the greatest trials of our housekeepers and one of the great causes of breaking up housekeeping of so many families, has arisen from the difficulty of getting good, reliable help. For several years this source of trouble has greatly increased, for the "Biddies" and "Maggie's" were getting so all important, that the best part of the house, the food, and the time, was "claimed by them. But now, fortunately, there is a hope that the Chinese will prove to be the very best house servants that could be had, being found quick to learn, constant on duty, and faithful, and can be had at about *one half* the cost.

We clip from an Eastern paper the following capital hit at some of those domestics, who are frequently found at the employment offices, seeking places.

The reader will see many very true hits in the article:

HELP WANTED.

"Wanted—A *young lady* to do general housework in a private family where there are no children.

An assistant will be furnished, whose business it will be to do the scrubbing, make the fires, wash the dishes, do the washing and ironing, sweep and dust the rooms, bring in fuel, etc.

The fine washing will be done at the public laundry, and the bread and poetry procured at the baker's.

To relieve the young lady from some of the household duties, the mistress of the house will get the breakfast ready on Sunday mornings, and attend to most of the cooking on week days.

No objection will be made to the young lady's father and mother, brothers and sisters, aunts, uncles, cousins, etc., frequently calling and staying to dinner; on which occasions ample provisions will be made.

The young lady's sleeping apartment will be elegantly furnished and kept warm, with the exclusive use of adjoining parlor, which will be also sumptuously furnished.

Nothing in the house shall be kept under lock and key, the young lady being allowed access to every closet and drawer, the contents of which will be considered the joint property of the household.

Should sickness occur in the family extra help will be employed to prevent the young lady's privileges being encroached upon.

No reference asked from the young lady; on the contrary, the best of reference will be furnished as to the respectability of the advertiser.

Salary liberal. Apply, etc."

To the above advertisement, which is supposed to have appeared in a recent New York paper, the following reply was duly received:

"In reply to inclosed advertisment, the subscriber begs to offer herself as a candidate for the place, provided the following interrogatories are satisfactorily answered:

What is the salary attached to the position?

How many are there in the family?

Does the house contain the latest improvements, such as hot and cold baths, heaters, etc.?

Is the kitchen carpeted, and otherwise properly furnished?

Is the young lady's young man allowed to come and go when he pleases; and, if the night should be inclement, would a spare chamber be furnished for his accommodation?

Will the young lady be permitted to go out and to receive company when she pleases, and to have entire charge of the pantry?

What company do you keep, and what sort of neighbors have you?

Be explicit in your reply, which must contain ample security that all the conditions appertaining to the position will be faithfully observed, under forfeiture of $,5000

Address, pre-paid, inclosing postage stamp,
SARAH MARIA INGOLDSBY,
Box 1,070, N. Y. Post Office.

The reply was not sufficiently satisfactory.

The exactions of these "stuck up housekeepers" are unbearable, so they are.

The "young lady" is not yet suited.

To Young Men.

Let the business of every one alone, and attend to your own. Don't buy what you don't want.—Use every hour to advantage, and study to make a leisure hour useful. Look over your books regularly. If a stroke of misfortune comes upon your business, retrench, work harder, but never fly the track. Confront difficulties with unflinching perseverance, and you will be honored; but shrink and you will be despised.

Seek to acquire the power of continuous application, without which you cannot expect success. If you do this, you will be able to perceive the difference which it creates between you and those who have not such habits. You will not count yourself, nor will they count you, as one of them. Thus you will find yourself emerging into the higher regions of intellectual and earnest men—men who are capable of making a place for themselves, instead of standing idly gaping, desiring a place.

Spruce Up.

If you get a moment to spare, spruce up; put that gate on its hinges, put a little paint on the picket fence you built last year; trim up your door-yard,—make it cozy and inviting. Don't say you can't find time to attend to these things. The fact is you have no right to be slovenly. Your wife and children will be happier, your farm will sell for more money in the market, and will be worth more to you at home, if you devote an odd hour now and then to sprucing up.—*Household.*

Kissing by Birth.

A young lady who was rebuked by her mother for kissing her intended, justified the act by quoting the passage: "Whatsoever ye would that men should do unto you, do ye even so to them."

OUR LADY CORRESPONDENT FROM PENN.

LETTER NUMBER TWENTY.

[*A miscarried Letter.*]

GREEN TREE, Pa., January 25th, 1870.

Now Con.

It is about time for you to come down off that fence. Are you in favor of Woman Suffrage or are you not?

I would like to know, for if you are not—why, means must be taken to convert you. Come now, *yes or no*—which is it? Now don't attempt to put me off with soft words, and flattering phrases compliments are very pleasant, but they butter no parsneps—you perceive I am on the war-paths. I've been reading the *Revolution*, and I send you a copy; please read it with attention and without prejudice, if that is possible, for a man—(there! S. B. A. might have penned that herself, but if it makes you feel bad, why consider it blotted out). The *Tribune* is right, it is a startling paper, and its readers do not go to sleep over it. Thus much says Horace Greeley, never mind, we shall convert him yet. You want to know how we are going to do it? Why, we mean to elect him President; we all like him because he is so good as well as great.

And imagine how he will feel sitting in state at the White House with his hat full of hot coals.

But if Horace Greely does not advocate Woman Suffrage, he does not sneer at those who do; though he will not get down and give the car of Female Emancipation a push, he would not lay a straw in its path.

But we have masculine advocates—and not a few—of whom we are justly proud. No man need be ashamed of favoring a cause that has for its supporters Henry Ward Beecher, Bishop Simpson, and George William Curtis, and the brave and courtly Colonel Higginson.

There, what do you think of that for a beginning? But I must tell you what I have been doing this afternoon—to put you in a good humor—trimming grape vines; you don't think that unfeminine work, do you? It is my first attempt at methodical pruning, and uncle Billy, who happened to come along just as I got through with my first cane, pronounced the work first rate (Grant White says we may use that word) in fact he said he could not have done it any better himself.

And uncle Billy, you must know, is excellent authority on all such things; indeed, half the neighborhood thinks that what uncle Billy don't know about trees, vines, horses and dogs, is not worth knowing.

I am sure he never read a book on the culture of the grape-vine in his life; but he has pruned many a vine in his time; and while I do not underrate theory, I have a very saving faith in practice.

I pruned two vines and then the sun went under a cloud, and it looked so dismal out-doors that I came in to the fire, and you may thank or blame the sun for this letter, for if he had gone on shining I should have gone on pruning, and it would never have been written.

But the dreary aspect of things in general does not have any effect on Peter. I see him through the window yonder plodding away at his peach trees.

He is setting out a peach orchard. Well, I can't plod—that is a fact—I must be interested in things or I cannot get on.

Peter says it is because I have too much imagination, what he means by that I don't know—when I put two house-cloths at the kitchen door and insist on his using them both. He says I have too much imagination, and when I tell him I detest tobacco. He finds imagination again at fault.

But dear me! Here is Peter coming to look at the clock. I understand that manoeuvre perfectly: it means that I must stop scribbling and get supper; we are going to have baked apples with sauce, made of three tablespoonsful of flour, three of sugar and one of butter, and enough of boiling water and nutmeg to make it just right.

Good bye, JESSY DARE.

P. S.—And so Miss Nelly *thinks* she could love Jenny Dare—but she is not quite sure—oh what a wise puss it is!

Why, Nelly, Jenny is over head and ears in love with you, and you *think* you could love her, the least little tiny bit! Oh, Nelly, Nelly, what a flinty little heart you must have! JESSY.

[*Reply in full in our Editorial Column.*]

Conquer Your Troubles.

A great many men, whatever may have been their experience in life, are accustomed to complain of the usage they have received in the world. They fill the ears of those who have the misfortune to be their friends with lamentations respecting their troubles. But there is no man who is not born into the world of trouble; and no man has ever attained to anything like the full stature of manhood, who has not been ground, as it were, to powder, by the hardships which he has encountered in life. This is a world in which men are made, not by velvet, but by stone and iron handling! Therefore, do not grumble, but conquer your troubles.

Character is not shaped by trifles any more than marble is sculptured by puffs of air. Only by hard struggles, and stern conflicts with temptation, and resolute self-mastery, does the divine principle assert its supremacy and carve its immortal lovelines into every faculty and mood of mind. The sharpness of our trials and the hardness of our lot, show what sterling stuff we are made of, and how long we are to last.

Corn Meal as Food.

Corn meal as a cheap, palatable and nutritious article of diet is not appreciated in most families. Thorough cooking is one of the things it consists of, whether it takes the shape of griddle cakes, bread, pudding or mush. Well cooked, it is an worthy a place on every table as often as every other day.

Miscellaneous.

NEW
AGRICULTURAL
BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

BATH HOUSE.

No 524 TO 528 PACIFIC STREET.

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense have been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31 23

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds, Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary will be earned.

None need apply who cannot bring undeniable references. Apply to EDITOR FARMER.

Miscellany.

THE STORY OF BISHOP HATTO.

When you have toiled up the tortuous path, through the Niederwald forest, to the tip top summit, you will never regret the trouble. The glorious panorama before you cannot be pictured in words. On one side you can distinguish the chateau and vineyards of Johannisberg, the castle and park of Biebrach, and further off the towers and steeples of Mayence. Opposite you is Bingen and the junction of the Nahe, whose brown stream sooth to say, somewhat pollutes the green waters of the Rhine. Everywhere are dotted little towns villages and hamlets, with here and there the blue smoke curling upwards lazily. You can see the Rhine steamers leaving behind them a trail of smoke, as they make for Mayence, or in the other direction for Coblenz.

Near the spot where Nahe enters the Rhine, as mentioned above, there is a little square tower a well known tradition specially directed against the hard hearted, and which was long since embalmed in verse by Southey.

Bishop Hatto, a gentleman who in the tenth century was the bosom friend of the Emperor Otho, was known, to be a person of great talent, and was yet an extremely hard, and cruel man.—An unusually wet season had caused a very bad harvest. The Bishop was however, all right—had large stores of last year's grain. The poor, looking on him as the representative—as he professed to be—of heaven, came to him clamoring for food. He appointed a time, invited them into his great barn, locked them in and set fire to it, so that all of them were destroyed.

"I' faith t'is excellent bonfire,' quoth he,
And the country is greatly obliged to me,
For ridding it in these times forlorn,
Of rats that only consume the corn.

"So then to his palace returned he,
And he sat down to supper merrily,
And he slept that night like an innocent man;
But Bishop Hatto never slept again."

Fate was now against him. The next morning entered his hall, and looked for a favorite picture. It was gone: the rats had eaten it! A servant rushed in. "My Lord," your granaries are empty the rats have cleaned them out!" A second menial arrived, hot and flushed, "My Lord, fly!

"Ten thousand rats are coming this way,
The Lord forgive you for yesterday!"

The Bishop retreated to his tower in the Rhine, which was, and is, surrounded by water. He reached it and retired to rest, but was awakened by two angry eyes of fire glaring on him. He listened and looked: Poob, said he, it is only the cat! He looked again. What can make poor puss so terrible? The rats! the rats! they are now surrounding the tower, biting and gnawing at every door.

"Down on his knees the Bishop fell,
And faster and faster his beads did he tell,
As louder and louder, drawing near,
The saw of their teeth without he could hear."

But there was no forgiveness for such as he.—In the rats poured, and in the morning nothing was left but an extremely clean and well picked skeleton of a Bishop.

LAMP ORNAMENTS.

Most people in cleaning lamp chimneys, use either a brush made of bristles twisted into wire, or a rag on the point of scissors. Both of these are bad; for without great care, the wire or scissors will scratch the glass as a diamond does, and, under the expansive power of heat, the chimney soon breaks, as all scratched glass will. If you want a neat thing that costs but little and will save your glass, tie a piece of soft sponge, the size of your chimney, to a pine stick.

COST OF DRINK IN ENGLAND.

The *British Almanac* for the year 1870, states that there is expended yearly in the United Kingdom, for drink and tobacco, more than a hundred millions sterling. The writer, Dr. Smiles, grounds his calculations upon government returns. Scotland imbibes whisky at the rate of 18 gallons annually to each adult male. The English consumption of beer is about a hundred and twenty gallons yearly to each adult male.

A CHANCE FOR OUR SPORTSMEN.

That's a good gun of yours, stranger; but Uncle Dave here has one that beats it." Ah! How far will it kill a hawk with No. 6 shot?" "I don't use shot, or ball either," answered Uncle Dave?" "I shoot salt altogether. I kill my game so far off with my gun, that without salt the game would spile before I could get it."

VALUABLE PAINTINGS.

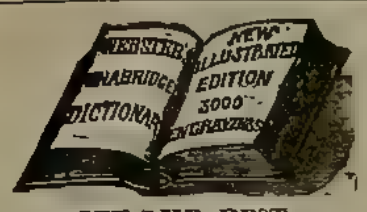
At the recent sale of the San Donato collection of paintings in Paris, some of the works brought very great prices. The "Lady Jane Grey" of Delaroche sold for 110,000 francs, and the "Francesca di Rimini" of Scheffer, 100,000 francs. The Greuzes of the collection also sold well, one being run up to 50,000 francs.

WHAT RUIN'S PEOPLE.

We are ruined, not by what we really want, but by what we think we do; therefore, never go abroad in search of your wants; if they be real wants, they will come home in search of you; for he who buys what he does not want, will soon want what he cannot buy.

The subscriptions for the benefit of the family of the late Mr. Stanton now amount to $150,000. Of this sum $65,000 is contributed by New York, $55,000 by Pennsylvania, 25,000 by persons in Boston, and $16,000 by persons in Washington.

One of the Salt Lake Saints has for three of his wives a grandmother, mother, and daughter — in this way avoiding the unpleasantness of a mother-in-law.



GET THE BEST.

Webster's Unabridged Dictionary.

IMPORTANT

....TO....

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

WARREN & CO.,

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attach as to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 600 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.)

GRAIN AND FLOUR MARKET.

San Francisco, April 7.

Our Grain holders have now a little time, before haying time begins, to hurry up the balance of their Grain to market; although the Markets have been dull,—very dull—and the demand for Flour quite small, yet there is a good demand for good Wheat—the best realizing $1,60 and $1,65, and now is the time to catch the highest figures; for, with the prospect of a very large harvest the present season, there cannot possibly be a better time than the present to sell Wheat.

Barley, Oats, Corn, Hay—all these are in full supply, and prices easy.

Potatoes command good prices, and other produce fair rates.

Retail Prices in the Fruit Market.

Very little change to note in our Fruit Market. The supply is small, varieties few. We have abundance of oranges, lemons and bananas, from down South.—Apples and pears small, and closing out.

Last Saturday one thousand pounds of strawberries were reported as being brought to Market. The cold weather, however, does not give them the sweetness to make them palatable; they are out of season, and taste like watermelons in winter.

Dairy—Butter, Cheese, Eggs etc.

(M. B. French & Co.)

The Dairy remains about the same as last week; prices low; if anything, they are tending downward, by reason of more persons going into the Dairy traffic, and greater competition.

One important change is needed: less poor butter, and more of "No. 1." Tallow and soap-grease does not bring high rates, and many boxes marked *butter* had better be sent to the soap-boiler's. The aim of a dairyman should be to attain the highest standard of fame for his butter.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQUARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE REES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees. Also

SILK WORM EGGS

Of the French Annual species, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH,
Of the well known Smith's Gardens,
Sacramento City, Cal.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of these articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			5 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture!

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops,
Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards,

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at the office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best system of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

WARREN & CO.,
Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS for 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin the Seventeenth Year of Labor with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS.

The California Farmer and the Independent for $7 50, and to present them with Richie's splendid steel engravings of Grant and Colfax, a price of which is $2 each, thus giving them the two Splendid and Popular Pictures worth $4 each, both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. Henry Ward Beecher, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $7 50

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $5 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $4 50

The CALIFORNIA FARMER and the American Agriculturist, $3 50

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $3 50

The CALIFORNIA FARMER and the Pharmaceutical Journal of New York now in its 50th Volume, $5 00

The CALIFORNIA FARMER and the American Stock Journal, $3 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most favorable terms when desired.

The Terms of the Farmer will remain the same—$5 per year, $3 for six months, (gold payments) and $1 extra when payments have been delayed, and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, as the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 Clay St., San Francisco

FARMERS AND DEALERS, ATTENTION

Home Industry!

REAPING AND MOWING SECTIONS, BARS, ETC.

ALSO WITH

SECTIONS COMPLETE.

Manufactured at the

CALIFORNIA FILE MANUFACTURING CO.

437 Brannan St. San Francisco, Cal.

WE warrant these manufactured at our Establishment to be superior to any imported from the East, and at prices to defy competition

Orders from the Country.—Cut Pattern on a stiff piece of paper, and send in letter.

Sections from $2.50 to $3.00 per dozen Blades.

Bars and Sections complete at $1.75 per running foot.

33-10.

JUST RECEIVED—GOOD THINGS

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plants

(The Large Bell Variety)

Ramie Seed, Fresh

WATERMELON, CANTELOUPE AND MUSKMELLON SEEDS,

EXTRA QUALITIES)

Flower Seeds Choice,

MIXED LAWN-GRASSES

For sale at the "FARMER" OFFICE

A Bargain!

Fine Homestead on the Mountains

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the ground floor, and Two above, with every convenient arrangement for Family Comfort—Closets, bath-room, Cellar under house, etc.

Two outbuildings are, a good Carriage House, Wood-shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight years old, from which 1,500 Gallons of Wine have been made this Year.

A good Orchard of 500 Trees, Five to Seven Years Old, all Good Varieties of Fruit. Two Eleven Acre Fields of Land is best for Orchard, Vineyard, or Garden Crops.

There is any quantity of "Uncle Sam's" land, of the same Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste this place can be made a "little Paradise."

The House and Grounds will be sold at GREAT BARGAIN if applied for immediately, and will be sold for Less than Cost of the Buildings!

Apply to Editor of Farmer.

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, APRIL 14, 1870. NUMBER 13

The California Farmer AND Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING BY WARREN & CO.

OFFICE—*No 320 Clay street (up stairs), below Battery* SAN FRANCISCO.

TERMS OF SUBSCRIPTION.

By mail, for one year, $5; for six months, $3. For a club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed. City subscribers, delivered by carrier, 12½ cents a number or $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS.

San Francisco, Cal.

LIST OF AGENTS:

Our Subscribers can send money BY MAIL safely (register at the Post-office, and the money will come direct and sure.)

WHAT IS RAMIE?

[So many inquiries come to us respecting the "Ramie Grass," and so many persons seem desirous of trying it, that we deem it of so much importance that all the information respecting it, will be read with interest. Therefore we give here an extended article collated by the Agricultural Department at Washington, with other matters touching its character, growth, planting, cultivation, use, etc., together with the announcement of the Grand Premium of $25,000, (a nice fortune) now offered for the best Machine to separate the fibre.

Of this Plant and its uses, our cultivators should be well posted, and we hope California genius will awake and bear of this grand Premium. Ed. Farmer.]

The following letter from that eminent botanical authority, Joseph D. Hooker, of the famous Kew Gardens, England, who has examined the China grass fibers of the East under their various synonyms, corroborating our repeated statements that there is no essential difference between the specimens from different localities bearing local names. It shows that "ramie" is identical with the Chinese fiber, and that the proper name is *Behmeria nivea*, while *B. tenacissima* is the same as *B. Candicans*, (which has also been distributed by this department,) and that this is only a shrub variety of *B. nivea*, and not essentially different.—Besides, specimens from the South, Europe, and elsewhere have been grown together in the experimental gardens, and no difference has as yet been discovered;

Dear Sir: I have to acknowledge, with very many thanks, the parcel with ninety-five species of seeds, collected by Ravenel, together with certain living plants, which arrived in admirable order, and are very valuable additions to our stock.

I have been making inquiries about the grass-cloth nettle, which is widely cultivated from India through the Archipelago, to China. It is the *Behmeria nivea*, Hook, and Arn.

B Tenacissima, Gaud. (*Urtica tenacissima*, R X 4) is a mere concolorous variety of the same, (*B. nivea B. Candicans*, Wedd.) Chuma (or tchouma) and ramie, or caloi and "China grass," are all the same. It is also the "Dom Rhea" of Major Hannah's fibers, (fide spec. in Hv.)

I send herewith directions with regard to its cultivation, which may be useful to you, together with some seeds of the *Chrysiomeria Japonica*, just received from India, and another set of the Cinchonas, from Dr. Anderson.

Very faithfully, yours,

JOS. D. HOOKER.

The laborious mode of preparation of the fiber practiced in China, as communicated by Dr. D. J. Macgowan to the Journal of the Agri-Horticultural Society of India, is as follows:

PLANTING THE SEEDS

In China this takes place in May. Great care is first taken in the selection of seeds and in the preparation of the soil. The seed should be gathered on the appearance of frost; those produced from a recent root. After being dried, they are stowed away in a basket or jar, mixed with sand or dry earth—others say, moist earth. The jar is then covered with straw to protect the seeds from the cold, as, if exposed to its influence, they yield an imperfect plant. Before planting, the seeds are tested by immersion in water; those which float are to be rejected; those at the bottom, planted. A loose, dry soil is to be selected: if near a canal or river, it is preferable. The ground is to be well plowed, or broken finely, manured, and then divided into beds about eight yards long and one wide; the beds are to be raked, and afterward made compact with a hoe. After this, it is watered, and left for a night. On the following day raking up and pressing down is repeated. The beds being smooth, two or three table spoonfuls of seed are mixed with a bowl of earth, and sown broadcast over half a dozen beds; then they are swept with a broom to cover the seeds. In some places the seeds are first made to sprout, and then planted in drills, which are carefully filled up.—Just before the blades appear, a framework is to be constructed over the beds, on which mats should be spread to protect them from the heat of June and July. The matting must be kept moist by day, and removed at night that the blades may receive the dew of heaven. The beds are to be constantly weeded. When the plant is about two inches high, the framework and matting may be removed. When three inches high, it should be transplanted, having been well watered the night before; the blades should be taken up separately, with a portion of earth, and planted in a field, far removed from mulberry trees, about four inches apart. It may form a border to the cerealia and vegetables, protecting them from the depredations of domestic animals, which all avoid the "ma." In dry weather, the field is to be watered every three or four days until the second decade, when it may be watered every tenth day.

In November and December manure it with horse or buffalo dung, earth, straw, or any rubbish, a foot or more thick to protect it from the cold. In March rake it away and expose the plant, watering it in dry weather, and using rubbish of any kind for manure. A caution is given never to use swines' dung, as it is "saltish" and hurtful to the "ma." In the third or fourth year some say the second, the plant may be cut and used.

PLANTING THE ROOTS.

The roots are to be cut in pieces of three or four fingers' length, and are to be planted in May, half a yard apart, and watered every three or four days. On the appearance of the blades, use the hoe, and water them; they will be mature for cutting in the second year. In the course of ten years the roots become unfruitful; the shoots may then be cut off, and, if enveloped in earth and covered with matting, can be transplanted in places thirty or forty inches distant. The ground should be first well prepared with manure, and freely manured afterward, the manure being half water. Here, as before, the plants should be hoed from time to time. In many cases fresh earth, pulverised bricks, ashes, etc., are used for manure. Some years the husbandman has his crop injured by worms; he needs, therefore, to seek for and destroy them as they appear, by picking them off. It not unfrequently happens that the crop is in some places remarkably small, and sometimes the produce is very great without assignable cause.

CUTTING.

It yields three crops every year. The first cutting takes place in June. Care is to be taken not to cut the young shoots; keep, therefore, an inch from the ground. In a month or two the shoots are seven or eight feet high, when the second cutting takes place; do not cut the original stem. During the latter part of September, or October, the last cutting is performed, from which the finest cloth is made, the first being inferior, coarse and hard. After each cutting, the plant is to be covered with manure and watered, but not day by day, unless it be cloudy. At Canton, the plant is pulled up by the roots every year, from which it is evident that it differs widely from the "ma" just described.

PEELING.

On being cut, the leaves are carefully taken off with a bamboo knife, by women and children, generally on the spot. It is then taken to the house, and soaked in water for an hour, unless it is already wet by recent showers; in cold weather the water should be tepid. After this the plant is broken in the middle, by which the fibrous portion is loosened, and raised from the stalk; into the interstice thus made the operator, generally a woman or child, thrusts the finger nails and separates the fiber from the center to one extremity, and then to the other. The stripping process is very easy. It appears to be difficult to remove the fibers from the Canton "ma," as it is soaked in water for more than forty eight hours before peeling, which is done by men. They first cut off the roots, and then, separating the fiber from the stock, strip it off by drawing it over a pin fixed in a plank. In either process half of the fiber is taken off at a stroke. The next process is scraping the hemp, to facilitate which the fiber is first soaked in water. The knife or scraper is about two inches long; its back is inserted in a handle of twice its length. This rude implement is held in the left hand; its edge, which is dull, is raised a line above the index finger. Strips of hemp are then drawn over the blade from within outward, and being pressed upon by the thumb, the pilous portion of one surface and the mucilaginous part of the other are thus taken off. The hemp then "rolls up like bould tendons." After being wiped dry, it is exposed to the sun for a day, and then assorted, the whitest being selected for the finest cloth.

BLEACHING AND DIVIDING.

A partial bleaching is effected on the fibers before they undergo further division, sometimes by boiling and at others by pounding on a plank with a mallet. These are in some places repeated.—After being dried in the sun, an important operation then succeeds by women and children, to whom is intrusted the tedious process of splitting the fibers, which they do with their finger nails. Expert hands are able to carry thes division very far. When this process is preceded by hackling, the shreds are finer and softer. The threads are formed into balls, and subject to frequent soaking and washing. The ashes of the mulberry leaf are recommended to be put into the water with the hemp; others use lime for a whole night. Some simply expose it to dew and sun. In rainy and cloudy weather it should be exposed to a current of air in the house; moisture darkens it. The threads are now ready for spliciug, the work of the women and children, the labors of the Agriculturist being concluded, when the threads are rolled into balls, after being sized or stiffened with rice water. Before the thread is ready for the weaver, the balls are steamed over the vapor of boiling water in a close oven. They are then spread out to dry. The subsequent stages, until the cloth is removed from the loom, include nothing which interests, or at least instructs artisans in the West.

Major F. S. Hannah, in the Journal of the Agri-Horticultural Society of India, describes the India mode as follows:

CUTTING AND REMOVING THE FIBER FROM THE STALK.

The stalks are considered fit for cutting when they have become of a brown color for about six inches above the roots. To cut them the laborer seizes the leaves at the upper end and with his left hand, and passing the right hand down the root, strips off the leaves and cuts the stalk close to the ground. The stalks are made up into bundles, and the scraping off the outer bark commences at the same time, or this operation is deferred until the whole crop of the plant has been cut.—The scraping off of the fiber from each stalk is a very tedious operation, and is performed with a blunt edged knife; all that is left is the fiber and woody part of the stalk, which is exposed to a hot sun for two or three days to dry. The third morning, after having been exposed to the dew for several hours, the fiber is drawn off. This is done by breaking the woody stalk right through toward the thicker end, and then separating the fiber therefrom, drawing it off slowly toward the small end, some care being required in giving the same a peculiar twist so as to draw off as much as possible. Having finished with the smaller end, what remains on the thicker end of the stalk is pulled off in the same manner. It will be seen that this is a very clumsy way of extracting the fiber, and, as far as I can judge, one-fifth of the fiber still remains in the stalk, which may be taken off, however, at the second breaking, but the workers are not particular, so long as they get what they require. The hanks of the fiber are then seperately twisted at the upper end and tied up in bundles of long hanks of about one seer in weight, if kept for sale. As the fiber, however, thus extracted, is quite ready for the purpose of net-making, little or nothing more is done than to open out and prepare the threads for spinning, which is done first by drawing the single hanks several times with a blunt edged slip of bamboo, held in the right hand. This softens and strengthens the fibers, and they are more easily cut to the required fineness with the fingers and thumb nails and then made up into small hanks ready for the spinning process, the first stage of which is performed by the women with the common *takro* or spindle, in general use throughout India, the hanks having been well opened out and spread over the top of a high, circular, open bamboo frame, set endways on the ground. The further operation of spinning the first threads to the requisite thickness, and the weaving of the nets, is performed by men.

A MACHINE WANTED.

Repeated indorsements of the value of this fiber have been made by this department; and the urgent necessity for calling in the aid of mechanical invention has been set forth as the only means of arresting practical failure in its extended culture. For this animadversions have been freely meted out by parties interested only in propagation for purposes of speculation; but the same difficulty has met the British government in India, and the governor general has made the following announcement, and the consul general at Calcutta, Nathaniel P. Jacobs, in forwarding it, says:—"The prize of £5,000 may possibly stimulate the inventive faculties of some American mechanical genius in competition."

1. The government of India, after communications with various agricultural and horticultural societies in India, and with persons interested in the subject, has arrived at the conclusion that only real obstacle to the development of an extensive trade in the fiber of *rhea*, or China grass, is the want of suitable machinery for separating the fiber and bark from the stem and the fiber from the bark, the cost of effecting such seperation by manual labor being great.

2. The demand for the fiber is now large, and no doubt might be extended with reduced prices; and there is a practically unlimited extent of country in India where the plant could be grown.

3. The requirements of the case appear to be some machinery or process capable of producing, with the aid of animal, water, or steam power, a ton of fiber of quality which shall average in value not less than £50 per ton in English market, at a total cost, all processes of manufacture and allowance for wear and tear included, of not more than £15 per ton. The said processes are to be understood to include all the operations performed, after the cutting and transport of the plant to the place of manufacture, to the completion of the manufacture of fiber of the quality above described. The machinery must be simple, strong, durable, and cheap, and should be suited for erection at or near the plantations, as the refuse is very useful as manure for continued cultivation.

4. To stimulate the invention or adaptation of such machinery or process, the government of India offers a prize of £5,000 for the machine and process that best fulfills all the requirements named above.

5. Rewards of moderate amount will be given for really meritorious inventions, even though failing to meet entirely all the conditions named.

6. Arrangements will be made by the government of India for the supply of carefully dried stems, and specimens of fiber seperated from the bark, but subjected to no other process, to mechanical firms and others desirus of competing, on application to the secretary to the government of India, in the home department.

7. All the machinery, etc., must be brought by the competitors at their own charge, to the locality which will be notified hereafter, probably in the northwest provinces or the Punjat, and there worked under the supervision of their own representatives for a sufficient time, to enable the judges appointed by the government to determine whether all the conditions named have been complied with. The prize machine is to be transferred, to government at five per cent above cost price; and the patent-right in any such machine to be also transferred, if required, to government, on the latter securing to the patentee a royalty of five per cent on the cost price of all machines manufactured under the patent during its currency.

8. One year from the date of this advertisement will be allowed for the preparation of the machines and their transport to the locality named for the competition; and the trials will then be made and the decision of the judges announced. If no invention of sufficient merit is received in the above-named period to obtain the prize offered, the government will continue to allow machines to be tendered for trial till the end of two years from the same date, after which, or on award of the prize, the offers herein made will be withdrawn.

THE MAGNETIC TELEGRAPH.

It is almost impossible to estimate the benefits to mankind of the magnetic telegraph. Through its means longitudes have been determined with nearly absolute certainty, and the existence of cyclones, hurricanes, and violent storms not only announced, but their course and velocity ascertained with such exactitude that their approach can be heralded in time to prepare against their destructive forces. Shipping lying at our wharves anchored in the harbor, or preparing to sail, can be forewarned in time to avoid injury and loss.—Farmers can be notified, during crop-season, that a cyclone is sweeping over the land at some distant point, and can shelter their grain and hay before it reaches their domains. This system of heralding the approach of destructive elemental agents had been adopted in Europe, and found to be admirable in its operation. It is proposed to establish the same thing in this country, and we trust that the effort will be successful, especially as the cost of inauguration is quite small. The climate of California is so specially favorable for agricultural pursuits that our farmers can operate with assured certainty that their crops will not be injured by sudden and unforseen storms, as nothing of the kind exists, except in the regular season, after the harvest has been garnered; but all other sections of the Union are not so favored as the Pacific coast, and artificial agents should be employed for their protection whenever it is possible.

S. W. SILVER & CO.'S CIRCULAR.

SUMMARY OF LATEST INTELLIGENCE.

Victoria, *Melbourne*, January 3d, 1870.—Weather extremely variable during the month; farmers have suffered; harvesting is well advanced; the rains and hot winds have been very prejudicial, during "three days, the yield of many fields was reduced 8 or 10 bushels an acre." Fat stock very plentiful; and will continue so for the next couple of months. Meat preserving is progressing vigorously, the monthly exports being considerable. New companies are getting into operation.

South Australia, *Adelaide*, January 4, 1870.—The variation in the wheat market has been slight. A few parcels have changed hands at 4s. 2d., at which prices remain firm. Very little new wheat, as compared with former years, has been sold. The crop is turning out considerably less than was expected; about 6 bushels per acre will, it is said, be the maximum. The total export of wheat and flour last year was 38,874 tons flour and 194,093 qrs. wheat, making together, at 45 bushels wheat to the ton of flour, 73,378 tons flour. The export in 1868 was 33,846 tons, and in 1867, 95,-463 tons. The harvest is in full operation; in the North the yield will be about 4 to 5 bushels, instead of 7 to 8, as predicted. In the South and Southeast a much heavier crop is being garnered. The latter district is likely to average 25 bushels to the acre all round.

Western Australia, *Perth*, January 7, 1870:—Harvest nearly concluded, yields small in some districts, but in the aggregate fully equal to the requirements of the Colony. Wool clip good—season's shipments in all will be about 6,000 bales, the largest yet made.

New Zealand, *Wellington*, December 23, 1869.—Business is still dull. Stocks are light. The news regarding the native insurrection is pacific. Te Kooti and Kereopa are being pursued by a native force of 600 men under Topia, a supply of arms and ammunition being furnished by the Government; it is confidently expected that these rebels, with their adherents, will shortly be overtaken. The provincial government of Otago has invited tenders from any Company willing to undertake the construction of a line of railway from Dunedin to Balclutha, a distance of 51¼ miles, the Government to guarantee interest at a rate not exceeding 8 per cent. per annum on the paid-up capital of any company which may be formed for the purpose, to the extent of £400,000 for a period of 15 years from the commencement of the works. The Colonial Government has invited tenders for £150,000 Treasury Bills, to bear interest at a little over 6 per cent., the principal payable in November, 1874. The subject of flax culture and dressing is gaining much prominence, and as the natives are anxious to lease their flax lands to Europeans, the success of this new enterprise is considered certain. At the very least, it is calculated there are 500,000 acres of flax land in the Colony, which, if taken to yield the low quantity of half a ton per acre, would show a result of 250,000 tons. Assuming that £20 per ton was realised, the yield would be £5,000,-000, and at the rate machines are being erected throughout New Zealand, it is thought this estimate will be much exceeded.

Natal, *Pietermaritzburg*, January 4, 1870.—The weather at Durban has lately been boisterous and rainy, with thunder and lightning. Sugar-canes looking well. Wool and hides coming down in small quantities. Exports have increased £90,000 during the past year. Sugar shipments 149,536 cwt. against 93,256 cwt. in 1868, showing 55,324 in favor of last year. Wool exports 3,350,437 lbs. against 2,717,391 in 1868, an increase over 1868 of £13,914 value.

Argentine Confederation, *Buenos Ayres*, January 14, 1870.—The wool clip will fall considerably short of the yield of former years. The wheat crop is above the average, and likely to form an article of export.

GLOVE-MAKING.

It may not be generally known that the manufacture of gloves is being carried on in Weaverville. Such, however, is the fact. Mr. E. McCausland, an excellent workman, has developed the fact that there is a demand for more than one man can do of such work. There are other local manufactures that could, no doubt, be profitably carried on here. Everything like this retains money in the county, and it is a diversity of pursuits which render all profitable. Why can't the soap, brooms, and other staple articles which we use, be manufactured here? There is room for a number of enterprising men to establish themselves in permanent and paying business. It requires a great variety of articles to supply our population of three thousand souls, and their cost foots up a round sum. In time, this thing of purchasing everything abroad ready-made will remedy itself, but the sooner the better for the people of Trinity. It is in this way only that we "will find a remedy for this consumption of the purse."

[The *Trinity Journal* thus speaks of "Home Industry;" this is right. Every County should have manufactories of every suitable kind within its own borders, and thus build themselves up.—And if our Country Journals would fill their columns with reports of their own resources and capacities, they would soon draw to their borders a large emigration of the right sort of people.—We want emigration; but we do not want the *paupers* of Europe, nor a class of ignorant and poverty-stricken laborers; we have enough of them already. We want a better class—men of means and men of families, so that, while they are manufacturing or producing, their families would become consumers also, and thus aid in the enlarged development of all our resources.—Ed. Farmer.]

Agriculture.

WHAT I KNOW OF FARMING

BY HORACE GREELEY.

ESSAY NUMBER THIRTEEN.

THE POSSIBILITIES OF IRRIGATION.

I have given an account of my poor, little experiment in Irrigation, because it is one which almost every Farmer can imitate and improve upon, however narrow his domain and slender his fortune. I presume there are Half a Million homesteads in the United States which have natural facilities for Irrigation at least equal to mine; many of them far greater. Along either slope of the Alleghanies, throughout a district at least a thousand miles long by three hundred wide, nearly every farm might be at least partially Irrigated by means of a dam costing from twenty-five to one hundred dollars; so might at least half the farms in New England and our own State. On the prairies, the plans must be different, and the expense probably greater, but the results obtained would bounteously reward the outlay. I shall not see the day, but there are those now living who will see it, when Artesian wells will be dug at points where many acres may be flowed from a gentle swell in the midst of a vast plain, or at the head of a fertile valley, expressly, or at least mainly, that its waters may be led across that plain, adown that valley, in Irrigating streams and ditches, until they have been wholly drank up by the soil. I have seen single wells in California that might be made to Irrigate sufficiently hundreds of acres, by the aid of a reservoir into which their waters could be discharged when the soil did not require them, and there retained until the thirsty earth demanded them.

An old and successful Farmer in my neighborhood affirms that water is the cheapest and best fertilizer ever applied to the soil. If this were understood to mean that no other is needed or can be profitably applied, it would be erroneous.—Still, I think it clearly true that the annual product of most Farms can be increased; and the danger of failure averted, more cheaply by the skillful application of water than by that of any other fertilizer whatever, Plaster (Gypsum) possibly excepted.

I took a run through Virginia last Summer, not far from the 1st of August. That State was then suffering intensely from drouth, as she continued to do for some weeks thereafter. I am quite sure that I saw on her thirsty plains and hillsides not less than three hundred thousand acres planted with Indian Corn, whereof the average product could not exceed ten bushels per acre, while most of it would fall far below that yield, and there were thousands of acres that would not produce one sound ear! Every one deplored the failure, correctly attributing it to the prevailing drouth. And yet I passed hundreds if not thousands of places where a very moderate outlay would have sufficed to dam a stream or brooklet issuing from between two spurs of the Blue Ridge, or the Alleghenies, so that a refreshing current of the copious and fertilizing floods of Winter and Spring, warmed by the fervid suns, of June and July, could have been led over broad fields lying below, so as to vanquish drouth and insure generous harvests. Nay: I feel confident that I could in many places have constructed rude works in a week, after that drouth began to be felt, that would have saved and made the Corn on at least a portion of the planted acres through which the now shrunken brooks danced and laughed idly down to the larger streams in the wider and equally thirsty valleys. Of course, I know that this would have been imperfect irrigation—a mere stop-gap—that the cold spring-water of a parched Summer cannot fertilize as the hill-wash of Winter and Spring, if thriftily garnered and warmed through and through for sultry weeks, would do: yet I believe that very many Farmers might, even then, have secured partial crops by such Irrigation as was still possible, had they, even at the eleventh hour, done their best to retrieve the errors of the past.

For the present, I would only counsel every Farmer to give his land a careful scrutiny with a view to Irrigation in the future. No one is obliged to do any faster than his means will justify; and yet it may be well to have a clear comprehension of all that may ultimately be done to profit, even though much of it must long remain unattempted. In many cases, a stream may be dammed for the power which it will afford for two or three months of each year, if it shall appear that this use is quite consistent with its employment in Irrigation, when the former alone would not justify the requisite outlay. It is by thus making one expense subserve two quite independent, but not inconsistent purposes that success is attained in other pursuits; and so it may be in Farming.

As yet, each Farmer must study his own resources with intent to make the most of them. If a manageable stream crosses or issues from his land he must measure its fall thereon, study the lay of the land, and determine whether he can or cannot, at a tolerable cost, make that stream available in the Irrigation of at least a portion of his growing crops when they shall need water and the skies decline to supply it. On many, I think on most, Farms situated among hills, or upon the slopes of mountains, something may be done in this way—done at once, and with immediate profit. But this is rudimentary, partial, fragmentary, when compared with the Irrigation which yet shall be. I am confident that there are points on the Carson, the Humboldt, the Weber, the South Platte, the Cache-la-Poudre, and many less noted streams which thrid the central plateau of our continent, where an expenditure of $10,000 to $50,000 may be judiciously made in a dam, locks and canals, for the purposes of Irrigation and milling combined, with a moral certainty of realizing fifty per cent annually on the outlay, with a steady increase in the value of the property. If my eye did not deceive me, there is one point on the Carson where a dam that need not cost $50,000 would irrigate one hundred square miles of rich plain which, when I saw it eleven years ago, grew nought but the worthless shrubs of the desert, simply because nothing else could endure the intense, abiding drouth of each Nevada Summer. Such palpable invitations to thrift cannot remain forever unimproved.

In regions like this, where Summer rains are the rule rather than the exception, the need of Irrigation is not so palpable, since we do or may secure decent average crop in its absence. Yet there is no Farm in our country that would not yield considerably more grain and more grass, more fruit and more vegetables, if its owner had water at command which he could apply at pleasure and to any extent he should deem requisite. Most men, thus empowered, would at first Irrigate too often and too copiously, but experience would soon temper their zeal, and teach them

"The precious art of Not too much;"

and they would thenceforth be careful to give their soil drink yet not drown it.

Whoever lives beyond the close of this century, and shall then traverse our prairie States, will see them whitened at intervals by the broad sails of windmills erected over wells, where every gale or breeze will be employed in pumping water into ponds or reservoirs so located that water may be drawn therefrom at will and diffused in gentle streamlets over the surrounding fields to invigorate and impel their growing crops. And, when all has been done that this paper faintly foreshadows, our people will have barely indicated, not by any means exhausted, the beneficent possibilities of Irrigation.

THE USE OF BOTH HANDS.

A writer suggests that it would be a good thing for men and women were they taught in childhood to use their left hand equally with their right. The use of the right hand only for certain actions, such as writing and working with mechanical tools, is entirely conventional; and there does not appear to be any reason why people should not be ambidexter in every kind of manual work. Persons who have lost their right hand by accident frequently acquire great facility with the left, after some practice; but grown-up persons have not always the patience to betake themselves to the necessary practice. By children the thing would be acquired insensibly, if means were taken to lead them to the practice of it.—Children living in houses where two languages are spoken acquire both with great facility; and what is true of tongues would be equally so of hands.

[We are glad to see this subject circulated by the Press everywhere. The reasoning here used is the same as this Journal has advanced for years. We know it is true, for we have seen it fully carried out. We trust parents will think of this matter.—ED. F.]

A CURIOUS SUBSTITUTE FOR CEMETERIES.

The inventive genius of the old world seems to be at work to devise a substitute for cemeteries, by employing some process for treating the dead bodies of departed friends so as to render them excellent specimens of petrifaction. A foreign contemporary announces a discovery by which graveyards will become superfluous: "An odd discovery has just been made by a man of Grenoble, by which it is calculated that cemeteries and graveyards will become superfluous. At the decease of an individual, the body is plunged into a liquid invented by the man of Grenoble, and in about five years the individual is turned into stone! The secret of the petrifaction is known only to the discoverer. He says that in a thousand years' time, if persons will only preserve their relatives and friends, they will be able to build houses with them, and thus live in residences surrounded by their ancestors."

[Why not establish a "Gallery of Statuary," and keep families entire for many generations; it would save funeral expenses.—ED. F.]

TO DESTROY STRIPED BUGS ON VINES.

At a meeting of the Waltham, Mass., Farmers' Club, Mr. Dickinson said that he had successfully protected his plants from the depredations of the striped bug by taking a barrel hoop, cut it in halves, cross the halves at right angles, and set in the ground over a hill of vines, and covered this with newspaper. It worked well.

GREAT YIELD OF TURNIPS.

A correspondent of the Canada *Farmer* gives the following statement of the turnip yield in North Wellington: The yield of one lot was 1,160 bushels to the acre, and another 1,337 bushels. These were purple tops, grown in drills eighteen inches apart, and the roots about seven inches in the drills.

WORDSWORTH'S STUDY.

A stranger going over the grounds at Rydal, asked if he might see the poet's study. The servant took him to a room, and said, "This is master's *library*, but he *studies* in the fields."

A California missionary says that after devoting two nights to visiting the underground drinking and free lunch saloons of San Francisco, it is not a mystery to him that the California State Prison has 709 inmates, and that a large proportion of them are youths

FARMERS and others will do well to call on us before purchasing, as the rate of Eastern Exchange justifies us in offering goods at REDUCED RATES.

N. B.—

We have the Exclusive sale of HILLS Con. CORD HARNESS, for the Pacific Coast.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands.—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1855, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 24 2-100 per cent. For life-sustaining properties to all stock are not to sudden changes of weather or over-driving! Has no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and preserving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food, generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

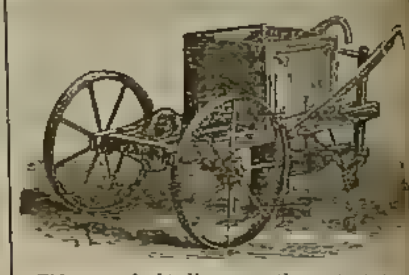
TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such pieces as the farmer may prefer; drops these pieces in the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over the ground that can be plowed.

No intelligent farmer can fail to see that an instrument with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value; because the days in which PLANTING can properly be done are very few, while he has all summer and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from other machines. It affords its aid "in the nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Instrument, and a good Mechanic can make a fortune with it. Particulars and Catalogues can be had at earliest

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and the particulars of board, washing, etc.

It will be our purpose to send out no person who is not fully qualified for the specific duties desired, or any man who is not of good character, nor shall we send out any man until, by a proper test, we have proved him qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us

PACIFIC ANATOMICAL MUSEUM,

—AND—

GALLERY OF NATURAL HISTORY AND SCIENCE,

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection of BOTANY, ICTHYOLOGY, and ENTOMOLOGY

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every assertion has been made to rest on this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE with the beautifully designed and the celebrated Du Chaillu GORILLA which was exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY

Open daily from 9 A. M to 5 and 7 to 9 P. M. Sundays

Horticulture.

LANDSCAPE GARDENING.

"IT IS THE FIRST STEP WHICH COSTS."

The disappointments which so often mock the hopes of a happy country life, and which come in the form of the annoyances and vexations entailed by lazy workmen, large bills and delinquent nurserymen, have led many persons to ask, is it impossible for us to have a cheap and yet beautiful place in the country, either by doing the work ourselves or by employing a professional person to do it for us? It is not impossible, if, before we begin our work, or to build our house, we carefully consider the difficulties which we must meet, and are determined to be contented with what is possible, and are willing to confess that we are ignorant of many things which it is the duty of only professional men to know. The largest number of country-place vexations come from miscalculations of what can be done with limited means We want more than we are willing to, or can pay for, and try to supplement our own efforts and, perhaps, the gratuitous advice of our neighbors and friends.

The first and long-enduring mistake made by those who go to the country to live in summer, or for the year, is an unwise selection of the land on which they mean to make their future home.—Chance oftener settles the question of locality than selection, though sometimes men are influenced by hereditary and family associations.—Where any local attraction, such as follows one's family or business, decide a man to purchase any particular piece of land, there is no need of deliberate thought about the advantages and economies of situation and treatment, because he must make the best of the land he has acquired; but when the purchaser is indifferent, and can as well build in one district or village as another, or in one or another part of the same town, then it is of the utmost importance that the selection should be carefully made.

It often happens that a wise choice of lot will save many hundreds and perhaps thousands of dollars in making a country place, as, for instance, whether the land will permit the house and other buildings to be built and approached by such easy grades as will require no extra filling of gravel to bring the new surface into harmony with the old.

A few feet of filling seems but little as we complete our building lot, and run over in our minds the inevitable expenses. But every two hundred and sixteen cubic feet of loam or gravel to be moved will cost from two dollars to six, in proportion as it is easy and convenient of access. It is extremely costly to move earth; we can spend a thousand dollars in that way without making much change of surface or show in the effect produced.

An unwise choice may make it necessary to spend a large sum in getting water, or in removing rocks to make a lawn, or in length of avenue, shelter required for protection to gardens, young plantations, etc.

All these first questions, which readily suggest themselves to the mind of a professional man as structural and unavoidable necessities, only come to the novice as he slowly moves from one point to the next. Therefore the selection of site, which involves them all, should be gravely pondered, and, if possible, we should get the advice of some experienced person.

Everyone thinks himself fully competent to choose a building lot, and most persons would scorn the idea of asking any man to help them.—Yet, when we look at the question analytically, and summon the long train of future work and improvements, which will cost from two to twenty thousand dollars, it is plain that we ought to start right, if possible, and that what we pay for advice, which will help us to avoid blunders, is but a small percentage on the whole future expense.

Most persons who have made country places, have said many times, as the work progressed, "If I had only known this at first,—if I had foreseen what I wanted, I would have changed my plan and have saved cost and trouble, but it is now too late to retrieve the mistake."

It is very easy, when we look back at the completed work, to see where great savings could have been made, if we had only known how to do, or to avoid some of the things we have undertaken, and it is just this knowledge that comes with the experience, which it is the peculiar office of professional men to supply; and no amount of reading or theory will enable a novice to obtain it.

Few persons understand, before they begin their work, that the simplest treatment of the ground to be improved will cost a definite sum of money, and that the amount will vary with the economy and wisdom with which the work is managed

It is easier to believe that any paid adviser will be likely to recommend costly work, which will tend to show his skill and give him a reputation, than to try to simplify our undertakings and reduce their cost. Such conduct is human, and we may be liable to be over-persuaded into extravagance by men who are familiar with the resources of nature and the effects which can be created by using money liberally; they too often act right value on other men's money; but it is certainly less dangerous to be guided in our plans by one who can answer any questions we may ask. We may test our theories before we put our money into them, if we consult with one who is supplied with a fund of experience in all matters that relate to the changes of surface and the use of earth, grass and trees. It is safer to seek such aid than to venture out alone on a sea of whose rocks and sand-bars we are ignorant; whose shores we have never explored; whose depths we never have sounded; our only guide being a compass that we have never learned to use.

TO THE PUBLIC!!!

THE

SAN FRANCISCO

PACKAGE EXPRESS

COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYING Passengers, Baggage, Packages, and Parcels from the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system presents itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and Boats and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. Package Express Company."

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series o Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

320 Clay Street

GOLDEN EAGLE HOTEL.

Corner Seventh and K streets,
SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families," and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the past year, to more than double its former size, with splendid suites of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

D. E. CALLAHAN,
33-1 PROPRIETOR

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING APRIL, 14th, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use, a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our *Journal*, to which we would direct their *special* attention.]

We have our European correspondent's letter for our next issue.

Farmers will find the "Greeley Essay" of this week it is of great practical importance to them.

"Landscape Gardening" is most clearly and truthfully set forth in the article under our "Horticultural" head, this week. The Essay is from the pen of the author of "Country Life,"—R. M. Copeland, Esq., one of the best Horticultural writers of the day.

We have letters from our Correspondent at Minerva Glen, in reply to "Jenney Dare," which will appear next week.

Many Letters from abroad with inquiries, and Mss., copy, came to hand too late for notice this week—will have due attention next issue.

We ask special attention to the selected matter in this number—the story of "Going Aloft," we esteem worthy careful reading by all who are easily led into temptation—all who love a Mother and cherish her memory should read that story.

Elder Knapp's discourse on Swearing should be read by the myriads of young men of our city, and old men too, who so constantly are guilty of this most unexcusable habit of swearing—a sin that has no palliation whatever.

POST OFFICE LAWS.

Every newspaper subscriber should read the Laws of Congress upon newspapers. Many persons are in great need of a better understanding of the law that rules between publishers of newspapers and subscribers. The law is imperative, and should be obeyed.

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittance to us, as there are several firms at Warren & Co., and unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO.,
California Farmer Office

RAMIE SEED, PURE & FRESH.

We have the GENUINE FRESH RAMIE SEED, in Packages, for sale only in small parcels neatly done up for mailing.

Packages $1, each.

At the FARMER OFFICE

VINEGAR. HOW MADE FROM CIDER, WINE, MOLASSES, OR SORGHUM, in Ten Hours, without using drugs. For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the Fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS INSTITUTION will commence on THURSDAY August 18th, 1869.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of ten months.....$250

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

24-3 REV A. VARSI, S J President.

THE SEASONS.

SPRING.

"Hail, Source of Being! Universal Soul
Of Heaven and Earth! Essential Presence, hail!
To Thee I bend the knee; to Thee my thoughts,
Continual, climb; who, with a master-hand,
Has the great whole into perfection touch'd.
By Thee the various vegetative tribes,
Wrapt in a filmy net, and clad with leaves,
Draw the live ether, and imbibe the dew:
By Thee disposed into congenial soils,
Stands each attractive plant, and sucks, and swells
The juicy tide; a twining mass of tubes.
At Thy command the vernal sun awakes
The torpid sap, detruded to the root
By wintry winds; that now in fluent dance,
And lively fermentation, mounting, spreads
All this innumerous-colored scene of things.

"As rising from the vegetable world
My theme ascends, with equal wing ascend,
My panting Muse; and hark, how loud the woods
Invite you forth in all your gayest trim.
Lend me your song, ye nightingales! oh, pour
The many-running soul of melody
Into my varied verse! while I deduce,
From the first note the hollow cuckoo sings,
The symphony of Spring, and touch a theme
Unknown to fame,—the Passion of the Groves."

Thus speaks that beautiful delineator of the Seasons, whose Poems have been the admiration of the world.

We ask our readers—those who have seen the country, in its present beautiful Springe robes—if they have ever seen the opening season more prosperous, or the earth presenting so great a surety of prosperity for the hopes of the husbandman, as at the present time.

From all sources, and from every part of the State we have, "tidings of great joy," from the cultivators of the soil. There is no complaint and no fears now, all is hopeful for the Agricultural interest of our whole State.

Grain comes forward with remarkable strength. The late refreshing rains will do a world of good. Grain will be harvested very early this season.—Considerable of early-planted Grain will be harvested the last of May.

The Hay crop will be very large and heavy, and it is to be hoped that more care will be given to it, so as to have it gathered green and sweet, that it may retain its aroma. Such care *pays* well.

The Fruit crop will be most abundant of all kinds. Vegetation springs forward now with railroad speed. Cultivators remark they have never seen an equal to this Spring.

WHOM SHALL I MARRY?

"Whom shall I marry?" is a question frequently propounded, but a very difficult one to answer.

The question comes from many a young man who is, in reality, very desirous to select a *better half* for life, settle down, and make himself a HOME.

Young men in the country ask the question in real earnest, yet they know and feel that, under the present educational system and the training of daughters, a very few of these *bundles* put together by dressmakers are fit to be selected as a real companion for life. "Such girls," say the young men, "will do very well to take to the theatre, to a ball or a party; but I could not take such a one as a WIFE."

There are hundreds of young men in all parts of our State, who would be glad to marry, and make some loving heart happy, in a good, quiet home; but the results they see all around them, of wedded life—of so much unhappiness and misery, deter them from it; and they say they are unwilling to run the risk of shipwreck, and so they plod on in a life of bachelorhood; while hosts of girls, who have been wrongly educated by fashion's tyranny, remain unsought, and lead a wretched life of dissipation and single-blessedness (?), and learn, too late, the fatal error they have committed, in a premature old age and a life misspent,—going to an early grave unloved and unwept.

Who can bring about a Social Reform, that shall create happiness where misery now prevails?

Will not some of our earnest men and women who desire a social reform—a reform that will advance the moral, intellectual and social interests of human beings—advance sound theories on this subject

It is a sad reflection upon human progress in 1870 to hear it so often said, that the young people of both sexes are generaly unfit for the married state, that they are not educated in a manner to fit them for it.

ABUSES OF THE PRESS.

Mr. Greeley is a veteran in his profession, and what he says about it is worthy of very respectful consideration, as the result of great experience.—At the late dinner of the Knights of St. Patrick, in response to the toast of "The Press," he made one of the pleasant little speeches that roll so fluently from his lips upon festive occasions; and in the course of it he said: "I insist that the abuses of the Press to-day are the most conspicuous feature of the Press, and that the fault is entirely with the public." Public persons, he said, expect to be publicly criticised, but there are thousands of persons who are not public, and by what right does any newspaper make them the subject of comment? And yet if any paper, with the intention of making itself "spicy," and "alive," and "talked about," drags into its columns the most private persons and the most domestic events, and invents gossip and retails scandal, and the public supports the paper, and buys it because it is so "saucy," then, says Mr. Greeley, the responsibility is with the public.—And he might have added that when the individual who thinks "sauce" so entertaining finds his own wife and daughters and family affairs served up in the same piquant style, he will doubtless console himself by reflecting how agreeable a morsel he is in that "sauce" to his neighbors.—*Harper's Weekly*.

SPRING PRUNING.

"As the twig is bent the tree's inclined."

The Spring time is the season of pruning, and we will now suppose that all wise Orchardists and Gardeners have had their trees pruned early of the heavy or strong wood that was useless; if not, it is better even now to follow that excellent counsel which is given for the spiritual man, and "Every branch that beareth *not* fruit, I *cut away*, and every branch that *beareth fruit*, I purge (prune), that it *bear more* (and better) fruit."

This teaching is the right kind; if fruit is wanted, why grow useless wood? unbearing branches take the sap that should go to feed the fruit, and to perfect it; and a very great error is made in allowing useless branches to remain upon a fruit-bearing tree; for a tree, when judiciously pruned of its useless wood, becomes a mass of fruit-spurs, and these give rich and juicy fruit, for then they receive the whole power of the sap, which is so often lost upon worthless branches, and this is the reason that our market is crowded with small, half-grown, and tasteless fruit.

Another great injury is done to our orchards and fruit-gardens by persons who are entirely ignorant of fruit-trees—persons going round seeking work as *gardeners*;—ignorant quacks who cannot even read, and call themselves *gardeners!*—men who are no more fit to touch a tree than they would be to assume a professorship in a college; these quacks cut away all the fine young fruit spurs on the main branches—the *heart* wood of the tree—the very spurs that would give the finest fruit; and they thus expose the centre of the tree to our hot sun, which actually gives the circulating sap, as it courses in these naked limbs, almost a blood heat.

In a hot climate like ours, trees should be branched *low down*, and the tree so truly pruned at the head that all the strength of the roots should go to making fruit-branches and fruit-spurs in the centre or heart-limbs of the tree; and not let the sap be carried off to make small *nibbon* apples at the tips of long pendant limbs. Better pay double price for a skilful pruner than to allow a "botch" to ruin your trees, and lose the trees also by unskilful pruning.

Now also is the time to watch the development of young branches in the fruit tree; and, when of a moderate length, so as to form a neat branch—nip off the tender end of the limb; this will check its growth in length, but will compel it to feed the blossoms and young fruit with the best ascending sap; and its surplus, instead of making useless branches, will increase the size of the wood, and aid it in its preparation for strong fruit-buds for another year.

Never employ a "botch" to prune your trees.

DOMESTIC POULTRY

There is at this time a very great interest felt in the community about Domestic Poultry of the better kind. Cultivators are now desirous of securing the best breeds of the Brahmas, Black Spanish, Leghorns, Dorkins and many of the other new varieties not yet known among Poultry raisers generally to any extent.

We remind our readers that they will see in our columns the advertisement of Messrs. J. B. Smith, &co., of Plantsville Conn., also Mr. Loring, of Boston Mass. Both advertisers are those who are known to be largely engaged in Importing and raising select kinds of Poultry, and parties that furnish all the varieties desired to those who wish to Import largely.

We also call attention to the advertisement of Messrs. Nichols & Willard, of Fruit Vale, who are now entering into the business largely, they will furnish all the most desirable kinds wanted.

A visit to the grounds of these gentlemen will prove interesting to those interested. We shall give a sketch of those grounds in our next issue, having examined them for our own pleasure, and for the benefit of our readers, to whom we shall communicate next week.

THE WORLD REAPER AND MOWER.

We anticipated that we should have the very handsome Illustration of this famous Reaper and Mower, to present to our Harvesters on our front page this week, but as it has not arrived we can only say it will appear as soon as it reaches us from the Manufactory. Till then, purchasers of Harvesters can see the model at Messrs. Linforth, Kellogg & Co., No. 5, Front St., where also can be had discriptive Catalogues of this really wonderfull Machine. Catalogues can also be seen at our office.

PREMIUM FLAX.

Zerah Rider, Cambridge, Washington Co., N. Y. received a premium of fifteen dollars on a crop of flax grown on 2 12 acres of land. The land on which this crop was grown is a slate loam, in pasture, and manured the previous year with twenty loads of barn yard manure spread on the surface and plowed in, and planted in corn and cultivated in the usual way.

EXPENSES OF CROP.

Two bushels seed	$ 6 00
Plowing, sowing, and harrowing	6 00
Pulling flax $24; drawing, $3	27 00

1,260 pounds of flax, at 16 cents	204 60
	$248 60
Expenses	131 00
Net profit,	$117 60

ABSORPTIVE POWER OF THE SOIL.

The little book of which we spoke last week, "How Crops Feed," should be in the hands of every Farmer, and if the terms therein used are not familiar, it is very easy to have a good Botanical work with a glossary of terms, which will fully explain the meaning; and we also advise them to have one of "Webster's Unabridged Dictionaries,"—two books that all Farmers should have in their Libraries; and with these the scientific terms used in the analyses of soils, can then be easily understood.

We here annex a chapter from this little, but very valuable book, and commend the subject to our Farmers, hoping many will try the interesting experiment here so happily described. The subject is worthy of careful attention, for the *pocket* will be affected by the practice of this information.

We have already drawn attention to the fact that various substances, when put in contact with the soil, in a state of solution in water, are withdrawn from the liquid and held by the soil. As has been mentioned on p. 175, the first appreciative record of this fact appears to have been published by Bronner, in 1836. In his work on Grape Culture occur the following passages: "Fill a bottle which has a small hole in its bottom with fine river sand or half-dry sifted garden earth.—Pour gradually into the bottle thick and putrefied dung-liquor until its contents are saturated. The liquid that flows out at the lower opening appears almost odorless and colorless, and has entirely lost its original properties." After instancing the facts that wells situated near dung-pits are not spoiled by the latter, and that the foul water of the Seine at Paris become potable after filtering through porous sandstone, Bronner continues: "These examples sufficiently prove that the soil, even sand, possesses the property of attracting and fully absorbing the extractive matters so that the water which subsequently passes is not able to remove them; even the soluble salts are absorbed, and are only washed out to a small extent by new quantities of water."

It was subsequently observed in the laboratory of Liebig, at Giessen, that water holding ammonia in solution, when poured upon clay, ran through deprived of this substance. Afterward, Messrs. Thompson and Huxtable, of England, repeated and extended the observations of Bronner, and in 1850, Professor Way, then chemist to the Royal Agricultural Society of England, published in the Journal of that Society, Vol. XI., pp. 313–379 an account of a most laborious and fruitful investigation of the subject. Since that time many chemists have studied the phenomena of absorption, and the results of these labors will be briefly stated in the paragraphs that follow.

There are two kinds of absorptive power exhibited by soils. One is purely physical, and is the consequence of adhesion or surface-attraction, exerted by the particles of certain ingredients of the soil. The other is a chemical action, and results from a play of affinities among certain of its components.

The physical absorptive power of various bodies, including the soil, has been already noticed in some detail (pp. 161–176). In experiments like those of Bronner, just alluded to, the absorption of the coloring and odorous ingredients of dung-liquor is doubtless a physical process. These substances are separated from solution by the soil just as a mass of clean wool separates indigo from the liquor of a dye-vat, or as bone-charcoal removes the brown color from syrup.

Chemical absorptions depend upon the formation of new compounds, and in many cases occasion chemical decompositions and displacements in such a manner that while one ingredient is absorbed, and becomes in a sense fixed, another is released from combination and becomes soluble. Brief notice has already been made of the chemical absorption of ammonia by the soil (p. 243). We shall now enter upon a fuller discussion of this and allied phenomena.

When solutions of the various soluble acids and bases existing in the soil, or of their salts, are put in contact with any ordinary earth for a short time, suitable examination proves that in most cases a chemical change takes place,—a reaction occurs between the soil and the substance.

If we provide a number of tall, narrow lamp-chimneys or similar tubes of glass, place on the flanged end of each a disk of cotton-batting, tying over it a piece of muslin, then support them vertically in clamps or by strings, and fill each of them compactly two-thirds full of ordinary loamy soil, which should be free from lumps, we have an arrangement suitable for the study of the absorptive power in question.

Let now solutions, containing various soluble salts of the acids and bases existing in the soil, be prepared. These solutions should be quite dilute, but still admit of ready identification by their taste or by simple tests. We may employ, for example, any or all of the following compounds, viz., saltpeter, common salt, sulphate of magnesia, phosphate of soda, and silicate of soda.

If we pour solution of saltpeter on the soil, which should admit of its ready but not too rapid percolation, we shall find that the first portions of liquid which pass are no longer a solution of nitrate of potash, but one of nitrates of lime, magnesia, and soda. The potash has disappeared from solution and become a constituent of the soil, while other bases, chiefly lime, have been displaced from the soil, and now exist in the solution with the nitric acid.

If we operate in a similar manner on a fresh tube of soil with solution of salt (chloride of sodium), we shall find by chemical examination that the soda of the salt is absorbed by the soil, while the chlorine passes through in combination with lime, magnesia, and potash. In case of sulphate of magnesia, magnesia is retained, and sulphates of lime, etc., pass through. With phosphates and silicates we find that not only the base, but also these acids are retained.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No 320 Clay Street.

We are indebted to the Hon. Horace Capron, of the Agricultural Department at Washington, for the Monthly Reports of the Department to March; and also for a collection of Seeds, several varieties entirely new,—for which we return thanks.

We return thanks to Hon. S. B. Axtell, M. C., for Public Documents received.

CATALOGUES.

We have a copy of Hovey and Co.'s New Fruit Catalogue, or "Illustrated Guide,"—a very handsome work of over 100 pages, being a complete guide for the culture and care of Flower and Vegetable Gardens.

Messrs. Hovey and Co. are the well-known Nurserymen, Seedsmen and Florists of Cambridge, Massachusetts; their place of business is Boston. They were formerly for many years Editors and Proprietors of the "Hovey Magazine of Horticulture," which was conducted by them with great credit and honor. That Magazine was united with the "Journal of Horticulture," now published by Tilton and Co., Boston, and is a very popular Journal. We are pleased to make this notice, in justice to Messrs. Hovey and Co., whose Journal we have in our possession, for its entire issue of about *thirty years*

We have received the Nursery Catalogue of Ed. J. Evans, of York, Penn.

We have also received the Catalogue of the Monroe Nurseries, conducted by J. Wm. Rochester, N. Y.

ADVERTISING

We have the enlarged publication of the *Advertisers' Gazette*, published by Messrs. G. P. Rowell and Co., Advertising Agents for all the leading Newspapers in the United States. We can refer to this firm with much pleasure, as prompt and reliable.

We refer all who wish to advertise in the FARMER to this firm, who act for us as our Agents in the Eastern States.

Their *Gazette* is a large and valuable list-book of newspaperdom; a valuable publication.

New Magazines and Newspapers.

Our table is covered with a mass of New Magazines and Newspapers, asking an *exchange* with our Journal.

We do not boast of our *seventeen* or *twenty thousand* circulation; but if we should exchange with all that request us to do so, we should be compelled to publish about twenty thousand weekly.

"*Southern Farmer.*"

We have a copy of this Magazine, published at Memphis, Tenn.,—a Magazine of 24 pages; the pages, however, are given to advertisements. A well-got-up work, and full of practical matter; a most creditable Magazine, published by E. A. Phillips and Co. Happy to exchange.

"*Southern Land.*"

This is a new work, published by the Southern Land Company. We have Nos. 1 and 2 of the new work,—an 8-page paper of good style. Redmond, Esq., Editor. Published at New Orleans, La.

"*Watchmaker and Jeweler.*"

We have a copy of this work, devoted to the interests of watchmakers, jewelers, etc. A practical paper.

"*The Little Chief.*"

A monthly visitor to the school-room and home circle, and an excellent publication, truly worthy of a wide circulation. Published by A. C. Shortridge, Indianapolis, Ind.

"*The Cosmopolitan.*"

A newspaper bearing this title comes to us from New York—its No. 1; a publication after the style of the *Ledger*,—with long stories "*to be continued in our next*,"—a very fashionable way of asking a continued purchase of the paper, for when one is engaged in a story it must be *finished*.

"*Sports and Games.*"

A pretty little book for all seasons, containing a number of pleasant Sports and Games, explained and illustrated, so as to make them easily and quickly understood.

"*The American Sunday School Worker*"

Is a new publication in the cause of Sabbath Schools, published by J. W. McIntyre, St. Louis, Mo. We find the copies sent us to be of a very excellent character, and worthy of commendation. Only $1.50 per year.

Purdy's "Small Fruit Recorder."

We have copies of this very excellent little work which should be in the hands of all cultivators of Small Fruits, as it contains many practical points of value.

"*American Entomologist.*"

This truly valuable publication should be universally known. It is of great practical value among Nurserymen, Orchardists, and Gardeners, as it gives them all the history of Insects, Worms, etc., that infest Trees, Plants, and the Soil. The *Entomologist* is published by N. P. Stearns and Co., St. Louis,—Chas. V. Riley, Esq., Editor. Only $2; a Monthly, and finely illustrated. The March number contains a fine engraved likeness of B. D. Walker, Esq., the distinguished Santa Claus entomologist of Illinois, recently deceased, and whose loss is deeply deplored among all scientific men.

REMEDY FOR EARACHE.

There is scarcely any ache to which children are subject, so bad to bear, and so difficult to cure, as earache. But there is a remedy now known to fail. Take a bit of cotton batting, put upon it a pinch of black pepper, gather it up and tie it, dip it in sweet oil, and insert it in the ear. Put a flannel bandage over the head to keep it warm. It will give immediate relief.

"HOADLEY" "RUSSELL!"

HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS
With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs,—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails

BUCKEYE Mower, Reaper, AND SELF RAKER

NEW YORK.
SAN FRANCISCO.
Portland.

THE BUCKEYE FOR 1870!

THE MOST COMPLETE MACHINE MADE, WHETHER AS A

MOWER, REAPER, or SELF-RAKING REAPER.

For TEN YEARS in California, as at the East, the BUCKEYE is acknowledged AHEAD an SUPERIOR TO ANY OTHER MACHINE!

SALES EACH YEAR CONSTANTLY INCREASING.

Five Thousand Farmers in California have Used them, and Pronounce them the BEST Machines in the Market.

We offer the BUCKEYE SELF-RAKING REAPER to Farmers with the utmost confidence knowing they are Superior to any Self-Raking Reaper yet invented.

They have been Thoroughly Tested in California for Three Years, and give the Utmost Satisfaction

SOLE AGENTS FOR C. AULTMAN & CO.'S CELEBRATED

SWEEPSTAKES THRESHER!

Also the Genuine

HAINE'S HEADER.

Manufactured at Pekin, Illinois. Also

Hollingworth's Wheel Horse-Rake,

(The most Improved Rake in Use,) And a complete stock of

Agricultural Implements and Hardware.

MARCUS C. HAWLEY & CO.,
108 and 110 FRONT STREET, SAN FRANCISCO.

SUGAR CANE AND SORGHUM MILLS, Evaporators and Heaters, embodying all the recent improvements, and taking the lead of every kind in market. Manufactured by GEO. L. SQUIER & BRO., Buffalo, N. Y. Either Sugar or Sorgo Manuals for 1870 sent free. 33 12

TREES.
FRUIT AND ORNAMENTAL.
For 1870.

THE LARGEST AND MOST COMPLETE STOCK IN THE UNITED STATES.

Orders for large or small quantities promptly filled. Packing performed in the most skillful and thorough manner.

SMALL PARCELS FORWARDED BY MAIL WHEN DESIRED.

Nurserymen and Dealers supplied on liberal terms. Descriptive and Illustrated priced Catalogues sent, prepaid, on receipt of stamps, as follows:
No. 1.—Fruits, 10c. No. 2.—Ornamental Trees, 10c. No. 3.—Green-house, 5c. No. 4.—Wholesale, Free. Address

ELLWANGER & BARRY,
ROCHESTER, N. Y.

Very Choice Domestic POULTRY,

Eggs for Hatching, etc.,

Gray Brahmas, Light Brahmas, Buff Cochins, Plymouth Rock, fowls of enormous size, 10 to 14 lbs; and French table and egg fowls Creve cœur and Houdan. Sent by Railroad.

C. CARROLL LORING,
33-12. Importer. Boston.

NEW STRAWBERRIES.

THE GOLDEN QUEEN,
THE GREEN PROLIFIC,
PEABODY'S PROLIFIC,
DR. MACAISE,
EARLY SCARLET,
AGRICULTURIST,
AND JUCUNDA.

For Sale at the "FARMER" OFFICE.

CRANBERRY PLANTS, GRAFTING WAX, OIL PACKING PAPER.

CRANBERRY PLANTS by Mail, 50 cts. per 100—$4 00 per 1,000—postage paid. The kinds best adapted for Cultivation are—Early Black Ball, Large Mottled Ball, Round and Oblong Cherry. For moist land—Bugle, Early and Large; the best of all is the Mansfield Creeper. Habit differs from the other varieties; Fruit very large; great runners and bearers; best adapted with the Ball variety for Upland Culture.
For Description, Mode of Cultivation etc., enclose stamp for Circular, or 25 cts. for "Cranberry Culturist."

Grafting Wax

Of Superior Quality, in Small Packages for use.

OIL PACKING PAPER,

For Mailing and Packing Plants; a heavier article for covering Hot-beds, Manufactured and for Sale by

F. TROWBRIDGE,
33-8. Milford, Conn

VERY CHOICE
Domestic Poultry,

POULTRY, EGGS FOR HATCHING, ETC.

GRAY BRAHMAS, Light Brahmas, Buff Cochins, Plymouth Rock (Fowls of enormous size—10 to 14 pounds), and the French Table and Egg Fowls—Creve Cœur and Houdan. Sent safe by railroad.

C. CARROLL LORING, Importer,
BOSTON, MASS.

TRUE OPIUM SEED.

JUST RECEIVED—a Small lot of the TRUE OPIUM POPPY SEED, of a Superior Quality.
For Sale at "FARMER" OFFICE.

NEW SEEDS.

THE Connover Asparagus, new kinds of Cucumbers, ex[illegible] Beet, Long Blood and Turnip-Rooted Beet, Cabbage, Celery, Broccoli, Radish, and Lettuce, for successive planting.
For Sale at "FARMER" OFFICE.

Large Elm and Mulberry Trees

Those who desire to secure Superior Sized SHADE TREES of either the ELM or ASH, should call and look at the samples we have on sale.
The MULBERRY also will grow to a large tree, and is a fine Summer shade tree, with its large spreading foliage.
For either of these kinds, apply at the
FARMER OFFICE
32-34 320 Clay street.

"EARLY ROSE" SPROUTS.

A choice lot of Sprouts of the "Early Rose" Potatoe all ready for Planting.
These SPROUTS are put up in packages of FIVE and TEN pounds each—Price, $2 50, and $5,00.
It is estimated that a five pound parcel will produce at least TEN SACKS of first quality of this most wonderful Potatoe.
For Sale at the FARMER OFFICE.

Jackson Michigan WAGONS.

The subscribers are now in receipt of a large and full assortment of the above WAGONS.

ONE HUNDRED
IRON AXEL, size 1⅞-2-2⅛-2¼-
SHELL SKEIN, " 3½-3⅝-4-inch.

The JACKSON WAGONS have been sold by us for years, and with increased reputation

The MANUFACTORY being one of the LARGEST in the United States—are enabled to keep a stock of TIMBER seasoning for years, the low cost of which, makes it no inducement to work and any imperfect material.

These WAGONS are the best and cheapest FARM and TEAM Wagons ever sold in this Market—can be used as HEADER WAGONS.

We will guarantee them to stand in any climate.

ALSO—FOR SALE

The SEYMOUR and MORGAN, or NEW YORK REAPER, which has stood the test for twelve years—the Strongest and Best Reaper in use.

—ALSO—

PLOWS of all kinds. CULTIVATORS—HOES RAKES—BARROWS, Etc., Etc., all of which will be sold at reduced prices.

J. D. ARTHUR & SON, Sole Agents.
33-3. Cor. California & Davis Sts.

DOMESTIC POULTRY—PURE BLOOD,
Pigs, Dogs, Etc.

THOSE who desire to secure Pure Stock of Domestic Poultry are invited to visit our Poultry Yards, and see the varieties for themselves.
We have the following, raised by our ourselves, and guaranteed Pure Fowls:
LIGHT BRAHMAS, WHITE LEGHORNS, DARK BRAHMAS, BUFF COCHINS,
—ALSO—
Aylesbury Ducks---Bronze Turkeys.

These Ducks and Turkeys are New Varieties of great excellence. The Turkeys are said to weigh 20 or 30 pounds each.
We have perfected arrangements abroad, so that we can supply any breed of Fowls, Pigeons, Rabbits, Dogs, Pigs, etc., or any kind of small Stock to be procured in the old States or Europe, and supply them at lowest terms.
Those interested in Stock, that desire to procure or gain information about Domestic Animals, should Apply to

NICHOLS & WILLARD,
FRUIT VALE AVENUE,
BROOKLYN, CAL.

Herb Seeds.

Complete Collection of [illegible] kinds of HERB SEEDS of Superior Qualities.
For Sale at "FARMER" OFFICE.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

GENERAL AGENTS FOR THE PACIFIC COAST, Nos., 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

LIKE THE EVERGREEN SO SHALL OUR FRIENDSHIP BE.

To——

BY ELIZA COOK.

Some liken their love to the beautiful rose,
  And some to the violet sweet in the shade;
But the Flower Queen dies when the Summer day goes,
  And the blue eye shuts up when the Spring blossoms fade!
So we'll choose for our emblem a sturdier thing,
  We will go to the mountain and worship its tree;
Then a health to the Cedar—the Evergreen King,
  Like that Evergreen so shall our Friendship be.

The perfume it carries is deeply conceal'd,
  Not a breath of rich scent will its branches impart;
But how lasting and pure is the odor reveal'd
  In the inmost and deepest recess of its heart!
It groweth in might and endureth for long;
  And the longer it liveth the nobler the tree;
Then a health to the Cedar—the true and the strong;
  Like that Evergreen so shall our Friendship be!

It remaineth unscar'd in the deluge of light,
  When the flood of the sun-tide is pouring around;
And as firmly and bravely it meeteth the night,
  With the storm-torrent laden, and thunder-cloud crown'd
And so shall all changes that Fortune can bring,
  Find our spirits unalter'd and stanch as the tree:
Then a health to the Cedar—the Evergreen King—
  Like that Evergreen so shall our Friendship be!

AMERICAN GIRLS IN EUROPE.

I do not wish to undervalue English beauty, which is most satisfactory and enduring, and most of which will wash. But I confess that American beauty from New York to New Orleans has spoiled my eyes for any other; and when I am just getting accustomed to the solid English matrons and maidens, like Mr. Hawthorne, and beginning to like them—along comes a group of my fair country-women on their travels, and they spoil it all again. These dear Yankee girls—I fear you do not appreciate them at home. Here they admire and envy them—that is, the men admire and the women envy. On the continent they rave about them. Half a dozen American belles send a whole German town distracted. It is not only beauty and grace, but their wit, spirit and audacity. The continental customs favor their triumphs. No girl over there dares to say her soul is her own—let alone her body. She never goes anywhere without a *chaperona*; she never converses with a gentleman except to answer a question; she is of necessity insipid to the last degree. An American girl, on the contrary, asserts her freedom, goes where she likes, talks with every one she cares to talk with, says *du* to a German—just as she would do at home. He is overwhelmed, astonished, but all the more delighted. He tells his friends that the beautiful girl he waltzed with said *du* to him, and told him to bring her a glass of water, which sets them all crazy to be introduced, hear her say *du* to them, and he made water-carriers likewise. Next day the whole town is talking about and staring at her—the women are in a rage—but the result is the conviction that America *must* be a great country, increased emigration, and the consequent progress of civilization.—*European Letter.*

DOMESTIC RECIPES.

BUBBLE AND SQUEAK.

Cut into pieces convenient for frying, cold roast or boiled beef; pepper, salt and fry them; when done, lay them on a hot drainer, and while the meat is draining from the fat used in frying them, have in readiness a cabbage already boiled in two waters; chop it small, and put it in the frying-pan with some butter, add a little pepper and salt, and keep stirring it, that it may all be equally done. When taken from the fire, sprinkle over the cabbage a very little vinegar, only enough to give it a slight acid taste. Place the cabbage in the centre of the dish; and arrange the slices of meat neatly around it.

POTATO BISCUIT.

Boil two common sized potatoes with those you cook for dinner. Peel and mash very smooth and fine, add one quart of flour and a little salt to the hot potatoes, half a cup of good yeast, mix with milk-warm water and set in a pretty warm place. About an hour before tea-time, mould up into biscuit, put into a baking-pan and set on the stove-hearth. When they begin to rise well, put into a quick oven and bake to a delicate brown. They will be found light, sweet and moist.

BAKED APPLE DUMPLINGS.

Choose large russet or sour apples that cook tender; peel and quarter them, take out the cores, and use one apple to a dumpling. Pinch your piecrust well, grease your pie-pan, set your dumpright side up; do not let them touch each Put them in your oven, and bake to a ate brown. Eat hot, with any sauce you refer.

A PIPPIN PUDDING.

Boil six apples well; take out the cores, put in half a pint of milk thickened with three eggs, a little lemon-peel, and sugar to the taste; put puff paste round your dish, bake it in a slow oven, grate sugar over it, and serve it hot.

The Providence *Herald* says it is rumored "that the gushing Anna Dickinson will be, in due season, led to the altar by a well-known Rhode Island literary gentleman."

ELDER KNAPP ON SWEARING.

[The following essays on Swearing and Drinking we take from Harper's Magazine of April; they are most capital rebukes to profane swearers, a sin, folly and crime common in our midst, and a sin and folly that is a disgrace to all.]

Elder Knapp is not averse to having it understood that he may be regarded as a sort of consulting physician for sick souls when the original family doctor finds that his pharmacy has lost its efficacy. In one of his recent raids on the arch-enemy of souls, he selected, as being especially fit subjects for animadversion, the profane swearers; and this is the way in which he "went" for them:

"I will give you, my dear friends, a picture from a scene in hell. The devil is sitting in his private office, receiving the souls as they are brought to him from the upper world. In comes a infernal ailer, conducting a soul to everlasting flames. 'Who are you?' asks the devil, as the culprit was brought to where he was sitting. 'Secretary Benjamin, of the Confederate Cabinet,' was the reply. 'Oh yes, I knew you were coming,' said the devil, as he turned the leaves of his ledger and made an entry of the secretary's name. 'I always show consideration to those that have showed it to me. I've *got* to take you in, but I'll try and make you as comfortable as possible.' To the attendant: 'Show Mr. Benjamin to a place as near as you can get him to a current of air.' The next arrival was a man who had killed his mother-in-law. He was hung in Cincinnati. 'Take him away,' said the devil, 'but treat him kindly. The chances are two to one that he isn't much to blame. I remember his case. His mother-in-law came here three weeks ago. She looked as though she wanted killing. She's over in No. 63. Put him there, and set the old woman in front of the furnace.' No. 63 is too cool for her. Pretty soon another victim arrives. 'What has brought you here?' asks the devil. 'My case is a hard one,' was the reply. 'I am here just because I swore.' 'Because you swore?' asked the devil, rising angrily from his chair. 'Yes, that's all the sin I ever did.' 'All the sin?' re-echoed the devil—'*all* the sin? Why, you mean, despicable, contemptible, low-lived vagabond,' said the devil, as he brought his fist down on the table, 'there isn't a corner here that's hot enough for you. Of all the sixty thousand preachers that spend their Sundays in blackguarding, not one of them ever yet accused me of swearing. Blasphemed your Maker, did you? Profaned the holy name of your Saviour, that forgave his enemies upon the cross, and died to have saved *you* from here? You did this, did you?' The trembling culprit made no reply. 'Why,' continued the devil, whose voice arose as his wrath intensified—'why, there's no excuse for you. A man by an unlucky blow may kill another one. In pressing temptation a man may steal; he may lie to save his neck or to cheat his neighbor. There's some excuse for him. The profane swearer has no excuse! Attendant, take this accursed scoundrel out of my sight. Put him up to his neck where the coals are the hottest, and then put somebody to sit on his accursed head.'"

"SUN-LIGHT OIL"—A HOUSEHOLD HUMBUG.

Most of the "Humbugs" exposed in the column especially devoted to rascality, affect only the pocket. Here is one which, worse than the highwayman, demands both your money *and* your life; and we notice it in the Household Department, as in this case mothers need especial warning. We have several times seen circulars proposing to sell recipes for preparing "Sun-light Oil," which should give a better light and be cheaper than any other illuminating oil. Now we have, from one in Wisconsin, who has invested $2 in the thing, the recipe itself, which reads as follows: "To make one gallon, take 3 quarts of Benzine, 1 oz. Pulverized Alum, 1½ oz Alcohol, 2 ozs. Cream of Tartar, 2 oz. Sal-soda, 1 pint of Potatoes (cut fine), 2 tablespoonfuls of fine Salt, 2 drachms Oil of Sassafras, 4 drachms Gum Camphor. Dissolve the Alum in the Alcohol as much as possible; then add the Gum Camphor, and stir for a few minutes; then add to one pint of the Benzine, stir it well for ten minutes; then add all the other ingredients, except the Benzine, stir well until it foams, then add the remainder of the Benzine; leave it open and exposed to the air; shake it occasionally, and in ten hours' time it will be fit for use, although it should stand, if convenient, for 48 hours before using."

If this thing were not so wicked, we should ridicule its absurdity. It is an evident attempt to induce people to believe that, with the various additions and the prescribed mixings, the Benzine can be converted into something safe to be used for illuminating purposes. The Oil of Sassafras and Camphor are added to make the compound smell differently from pure Benzine; they are combustible, and so far are not foolish; but the other ingredients, Alum, Soda, Cream of Tartar, Salt, and Potatoes! are all sheer nonsense. They have not the slightest effect in making the Benzine other than Benzine, and the person who proposed to add them is a fool if he did not know it, and a rascal if he did. These recipes are hawked about the country by agents, who, by pleading the cheapness of the light, doubtless sell a large number. We do not know of any law that exactly meets the case, though by any sensible justice an agent of this kind would be punished as a common nuisance. Recollect that this "Sun-light Oil" is Benzine, and as far as danger is concerned, nothing but Benzine—unsafe, explosive, deadly. Better that your children should have no other light than tallow dips, or go to bed at dark, than run the risk of sudden death, or what is worse, being maimed for life by "Sun-light Oil." If you will use it, make your will, insure your life, ask your minister to get ready a sermon on the "Mysterious Dispensations of Providence."—*American Agriculturist.*

At the funeral of Prince Henri de Bourbon, at Madrid, the priests withdrew on seeing the insignia of the Masonic order on the coffin, and refused to perform the religious ceremonies.

A FUNERAL DISCOURSE.

The readers of the Drawer have been edified with the perusal of a sermon on "The Harp of a Thousand Strings," and the "Farewell Discourse of Brother Watkins." The tone of those discourses might, in a general way, be called pleasing. Not so, however, the following brief allusion from the pulpit to a young man of indifferent position in the social circles of B——, New Hampshire, who came to an early decease by a vigorous but absurdly unequal contest with a party of the Otard family. The preacher who officiated at the final solemnities improved the occasion by making the following remarks:

"I hev been requested, not to say importuned, too deliver a funeral discourse on this occasion, and I hev reluctantly consented too do so. I never heard any good of the deceased *yit*, and if the friends hev made up their minds that I am about to begin each a course now they are very much mistaken. I estimate, in fact, that this young man, now a-layin' before you, was about the *wust* man ever permitted, in the onscrutable ways of the divine *purposes*, too locate in this vicinity. He was one who I might say allers fell when he was tempted; and he certingly appeared to me too seek, rather than to avoid, occasions for such temptation.

"Why, my feller Christians, he kep' hosses and run 'em; he kep' cocks and fit 'em: and as too wimmin, let his widder (who a see a-settin' in a front paw) testify." (Here the widow arose, as was the custom when the family of the deceased was alluded to, and, deeming it a complimentary remark, courtesied to the preacher.) "In short, after a diligent inquiry into the particklerers of his kerrikter and conduct while he has resided in this village, I hev come too the conclusion that about the only good thing that kin be said of him at all is that he was an active member of the ingine company, and occasionally *good at fires*.

"The pall-bearers will now proceed to bear out the corpse, while the choir will sing, as an appropriate hymn, the 33d hymn, 2d book, short metre, four verses, omiting, if you please, the 3d and 5th stanzas:

'Believing, we rejoice
Too see the curse removed,'

with the usual Doxology."—Editor's Drawer, in *Harper's Magazine for April.*

MEDICAL.

DIPLOMAS FOR SALE—A VILLAIN AT THE WORK.

A circular letter has been extensively distributed in California, announcing that the writer will furnish diplomas from an "Eastern Medical College of high standing," on the receipt by him of $25—the entire cost to be $100. The trade is to be carried on through the Post Office. A number of these letters have been forwarded to us, showing that the author or authors are spreading their net very extensively. Attached to them is the name of "L. Tremand, M. D." We have reason to believe that there is no college concerned in the transaction, and that the circular is nothing more than a strike for $25, by a villain under a fictitious name, who merits a diploma from a criminal court, assigning him to duty at San Quentin.

TREATMENT OF POISONING BY RHUS.

It is well known that to sponge with a hot alkaline solution is an excellent remedy for the effects of the poison oak. A solution of caustic potash, sufficiently strong to render the skin soapy, is said to be uniformly effectual.

HAVE THE YANKEES DEGENERATED?

The *Providence* (R. I.) *Journal* has been looking up the records of life-insurance companies, in order to ascertain how far the Anglo-Saxon race has degenerated in America. It finds that the experience of 20 of the most prominent English and Scotch companies, compared with the combined American experience, is as follows: Starting with 10,000 lives at age 10, the American loss the first year is 75; the English 79. At age 20 American loss is 72; English 56. At age 40 American loss is 77; English 81. At age 50 American loss is 155; English 184. At age 60 American loss is 309; English 186. The editor concludes that at every period of life below eighty years, with the single exception of the second decade, which is very fatal among us, American vitality is superior to English.—*Pacific Medical and Surgical Journal.*

HOW TO BEGIN LIFE

Rev. Dr. John Hall thus wisely speaks to young people:

"There are two ways of setting up in life. One is to begin where your parents are ending—magnificent mansion, splendid furniture, and an elegant turn-out. Is not that the pretty dream of many about their start in life? The other is to begin a little nearer the point where father and mother—of blessed memory—began. You see, my dear friend, you can go up so easily and gracefully, if events show it to be safe; but it would be trying and awkward to come down. And it costs much now to live; and business fluctuates; and health is uncertain; and temptations from the side of pride are strong; and many a young man who did not mean to be extravagant has been led along; and rather than face the position and descend manfully, has tried to keep up by embezzlement, and been called a 'swindler.'"

TO CLEAN PAINT.

There is a very simple method to clean paint, which would save our housewives a great deal of trouble. Put some of the very best whiting on a plate or dish; dip a piece of flannel into some clean warm water, and squeeze it nearly dry; dip the flannel into the whiting and apply it to the painted surface, and a little rubbing will instantly remove any dirt or grease; after which, wash the paint well with clean water, rubbing it dry with a soft rag. Paint thus cleaned looks as well as when first laid on, without any injury to the most delicate colors. It is far better than using soap, and requires not more than half the time and labor

Miscellaneous.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

Miscellany.

GOING ALOFT.

One evening a party of old ship masters met at a social supper. After the cloth was removed, and the wine began to circulate freely, some of the older Captains commenced spinning yarns about their own adventures at sea. Among the number was Captain Sutter, as fine a man and good a sailor as ever trod a deck. It was observed that he drank nothing but water; and when it became his turn to entertain the company with a story, he began as follows:

Well, shipmates, to show you why I don't and can't drink with you, so that you won't take my refusal as a mark of coldness or disrespect, I will give you a chapter from the story of my early sailor life. It is a very important chapter, too; for on the incident I am about to relate the whole of my subsequent manhood was built.

I was very young when I first went to sea, and at the age of fourteen I considered myself quite a sailor. When I was eighteen I was shipped on board an East Indiaman for a long voyage. There were six of us on board of about the same age, and we had about the same duties to perform.—The ship—the old *Lady Dunlop*—was a large one, and our crew was large in proportion, there being fifty-two, all told. We "boys," as we were called, messed together, and in all othe respects were seperate from the rest of the crew, just as much as the officers were. Our Captain was a noble hearted, honorable man, kind and generous, but yet very strict.

Now we boys had learned, in the course of our travels, to drink our grog as well as any sailors. When we could get on shore we would invariably indulge in our cups, and not unfrequently would we come off in a state any thing but sober. I said "we," but there was one of our number who could not be induced to touch a drop of any thing intoxicating. His name was John Small.

Now Jack Small not only refrained entirely from drinking himself, but he used sometimes to ask us to let the stuff alone. He gave that job up, however; for we made much sport of him that he was glad to let us alone. But our Captain had sharp eyes, and it was not long before he began to show Jack favors which he did not show to us.—He would often take him on shore with him to spend the night, and such things as that, while we were kept on board the ship. That wasn't all.—He learned faster than we did—he was a better sailor and had learned more of navigation. It got so at length that Jack was called upon to take the deck sometimes, when the officers were busy; and he used to work out the reckoning at noon as regularly as did the Captain. Yet Jack was in our mess, and he was a constant eye sore. We saw that he was reaching rapidly ahead of us in every useful particular, and yet we wouldn't open our eyes. We were envious of his good fortune, as we called it, and used to seize every opportunity to tease him. But he never got angry in return.—He sometimes would laugh at us, and at others he would so feelingly chide us that we would remain silent for a while.

At length the idea entered our heads that Jack should drink with us. We talked the matter over in the mess, when Jack was absent, and we mutually pledged each other that we would make him drink at the first opportunity. After this determination was taken we treated Jack more kindly, and he was happier than he had been for some time. We were on our homeward-bound passage, by the way of Brazil, and our ship stopped at Rio Janeiro, where we were to remain a week or so. One pleasant morning we six youngsters received permission to go on shore and spend the whole day; and accordingly we rigged up in our best togs and were carried to the landing.

Now was our chance, and we put our heads together to see how it should be done. Jack's very first desire, as soon as he got on shore, was to go up and examine the various things of interest in the city. He wanted to visit the churches and such like places, and to please him we agreed to go with him if he would go and take dinner with us. He agreed to this at once, and we thought we had him sure. We planned that after dinner was eaten we would have some light, sweet wine brought on, and that we would contrive to get rum enough into what he drank to upset him; for nothing on earth would please us more than to get Jack drunk, and carry him on board in that condition. Then we fancied the Captain's favoritism would be at an end, and that he would no longer look upon our rival with more preference than upon ourselves.

Dinner time came at length. It was a capital dinner, and we came to it with sharpened appetites. But when the wine was brought in, Jack not only refused to taste it, but declined to remain in our company. We cried out against him as a mean, stingy fellow, who thought himself too good to associate with us, and accused him, at last, of trying to step over our heads on the ship, and all the unpleasant things we could think of to make the poor fellow unhappy. At first he seemed to be inclined to leave us and return to the ship alone; but suddenly, in a quiet tone, he said, "Shipmates, listen to me a moment.—Since matters have come to this pass I have resolved to tell you something which I never meant to reveal. My story is short. From my earliest childhood I never knew what it was to have a happy home. My father was a drunkard! Once he had been a good man and a good husband, but rum ruined all his manhood and made a brute of him. I can remember how cold and cheerless the winter used to be. We had no fire—no food—no clothes—no joy—no nothing—nothing but misery. Oh! how my mother prayed to God for her husband; and I, who could but just prattle to pray too.

"When I grew older I had to go out and beg for bread. All cold and shivering I waded through the deep snow, with my clothes in tatters and my freezing feet almost bare. And I saw other children of my own age dressed warm and comfortable, and I knew they were happy, for they laughed and sang as they bounded along toward school. Those boys had sober fathers.—I know that their fathers were no better than mine had been once; for my mother had told me how noble my father could be if rum were not in his way.

"Time passed on and I was eight years old, and those eight years had been years of such sorrow and suffering as I pray God I may never again experience. At length, one cold morning, in the dead of winter, my father was not at home. He had not been at home through the night. My mother sent me to the tavern to see if I could find him. I had gone half the way when I saw something in the snow by the side of the road. I stopped, and a shudder ran through me, for it looked like a human form. I went up to it, and turned the head over and brushed the snow from the face. It was my father, and he was stiff and cold! I laid my hand upon his pale brow, and it was like solid marble. He was dead!

"I went to the tavern and told the people there what I had found, and the landlord sent two of his men to carry the frozen body of my father home. Oh, shipmates, I can not tell you how my poor mother wept and groaned. She sank down upon her knees and clasped that icy corpse to her heart, as though she would have given it life from the warmth of her own breast. She loved her husband through all his errors, and her love was all-powerful now. The two men went away and left the dead body still on the floor. My mother whispered to me to come and kneel by her side.—I did so. 'My child,' she said to me, and the big tears were yet rolling down her cheeks, 'you know what caused all this. This man was once as noble and happy and true as a man can be, but oh! see how he has been stricken down. Promise me, my child, oh! promise, here, before God and your dead father, and your broken-hearted mother, that you will never, never, never touch a single drop of the fatal poison that has wrought for us all this misery.'

"Shipmates, I did promise all my mother asked, and God knows that to this moment that promise has never been broken. My father was buried, and some good kind neighbors helped us through the winter. When the next spring came I could work, and I earned something for my mother.—At length I found a chance to ship; and every time I go home I have some money for my mother. Not for the wealth of the whole world would I break the pledge I gave my mother and my God on that dark, cold morning. That is all, shipmates. Let me go now, and you may enjoy yourselves alone, for I do not believe that you will again urge me to drink."

As Jack thus spoke he turned toward the door, but one of us stopped him.

"Hold on, Jack," said he wiping his eyes.—"You sha'n't go alone. I have got a mother, and I love her as well as you love yours, and your mother shall not be happier than mine; for I swear that she shall never have a drunken son.—I'll drink no more!"

"Give me your hand, old fellow!" exclaimed the rest of us in chorus, starting from our seats; and before many minutes we all agreed to imitate Jack's noble resolution. We called for pen, ink, and paper, and made Jack draw up a pledge. He signed it first and we followed him, and when the deed was done I know we were far happier than we had been before for years. The wine upon the table was not touched, and the liquor we had drank during the forenoon was now all gone in its effect.

Toward evening we returned to the ship. There was a frown upon the Captain's brow as we came over the side, for he had never known us to come off from a day's liberty sober. But when we all came over the side and reported ourselves to him his countenance lighted up. He could hardly give credit to the evidence of his own senses.

"Boys," said he, "what does this mean?"

"Show him the paper," whispered I.

Jack had our pledge, and without speaking he handed it to the Captain. He took it and read it, and his face changed its expression several times. At length I saw a tear start to his eye.

"Boys," he said, as he folded up the paper, "let me keep this, and if you stick to your noble resolution you shall never want a friend while I live."

We let the Captain keep the paper, and when he had put it in his pocket he came and took us each in turn by the hand. He was much affected, and I know that the circumstance made him happy.

From that day our prospects brightened. Jack Small had our envy no more; for he took hold and taught us in navigation, and we were proud of him. On the next voyage we all six rated as able seamen, and received full wages, and we left to become officers on board other ships.

Jack small is now one of the best masters in the world, and I believe that the rest of our party are still living, honored and respected men. Three years ago we all met, the whole six of us, at dinner, and not one of us had broken that pledge which we made in the hotel at Rio. We had all stuck to the sea, and were then commanders of good ships.

That is my story; and now you know why I can't drink with you, and, as I said at first, will not take my refusal as a mark of disrespect or want of good-fellowship. —[*Harpers Weekly.*

Something New.

Two Million Copies of the Annual SHAKSPERIAN ALMANAC for 1870, will be given away, and in order that the distributing may be made as rapidly as possible, I should deem it a favor to send, pre-paid, ten or fifteen copies to any person who will judiciously distribute them in his locality. HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three-hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

GRAIN AND FLOUR MARKET.

San Francisco, April 14.

The Grain Market, both at home and abroad, is marked by dulness and decline. European telegraphs report Wheat at 95—another decline, as we have all along said would be the case.

No demand abroad for Wheat or Flour; none here; and, with the certainty of a very large crop here, prices must rule low in comparison with last year; but a large crop will ensure more returns per acre on all land well cultivated.

Barley and Oats are dull; little or no demand, and prices nominal.

Potatoes not in large demand, and prices less.

Onions scarce, and in demand at increased rates.

Hay in good demand at fair rates.

All other produce plenty, and demand fair.

DAIRY—BUTTER, CHEESE, EGGS ETC.

(M. B. French & Co.)

The Dairy traffic, while it increases and improves, the prices of Butter, Cheese, and Eggs, as will be seen, are less and less. This is the result of a better attention to the business, and better results by an enlarged production, and consequently a less price.

Shade Trees! Shade Trees!!

ORNAMENTAL & SHADE TREES

LARGE COLLECTION OF TREES.

EXTRA SIZE SHADE TREES.

Elm and Ash Trees.

A splendid lot of very choice and large size ELM and ASH Trees, for PUBLIC SQUARES, and STREETS, will be offered in Lots to suit Purchasers.

Mulberry Trees.

Large size Mulberry Trees, White, Red, and MORUS MULTICAULIS, of all sizes, suitable for planting out as Shade or Ornamental Trees, and also as Fruit Bearing, or for feeding the Silk Worm.

The Mulberry Tree makes a handsome Shade Tree, and is an Ornamental and Fruit Tree combined.

These Trees will be sold in lots to suit purchasers.

OSAGE ORANGE TREES.

A few lots of Osage Orange Trees for setting out as Ornamental Trees.

SILK WORM EGGS

Of the FRENCH ANNUAL SPECIES, for sale.

The above will be sold on the best of terms.

P. S.—Orders addressed to A. P. Smith, will be promptly attended to.

Sample Trees can be seen at the FARMER OFFICE, where information of the quality of the Trees and the price can be had.

A. P. SMITH.

Of the well-known Smith's Gardens,

Sacramento City, Cal.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash, or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December

Collections can be forwarded by post at the following rates:

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $3 00 and upwards.

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs, Plums, Almonds, Cherries, Walnuts, Apricots, Nectarines, Pears, Grapes, Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best seasons of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

SPLENDID PREMIUMS!!

1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our Seventeenth Year of Labor with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of Grant and Colfax, the price of which is $2 each, thus giving them these two Splendid and Popular Pictures worth $4, and both these Papers for $7 50.

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. Henry Ward Beecher, $7 00.

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00.

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $6 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $6 50.

The CALIFORNIA FARMER and the American Agriculturist, $4 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $1 00.

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $7 00.

The CALIFORNIA FARMER and the American Stock Journal, $5 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the Farmer will remain the same—$5 per year, $3 for six months, (gold price,) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers,
320 Clay St., San Francisco.

FARMERS AND DEALERS, ATTENTION

Home Industry!

REAPING AND MOWING SECTIONS, BARS, ETC.,

ALSO WITH

SECTIONS COMPLETE

Manufactured at the

CALIFORNIA FILE MANUFACTURING CO.

437 Brannan St. San Francisco, Cal.

WE warrant those manufactured at our Establishment to be superior to any imported from the East, and at prices to defy competition.

Orders from the Country.—Cut Patterns out of stiff piece of paper, and send in letter.

Sections from $4 50 to $3.00 per dozen Blades.

Bars and Sections complete at $1.25 per running foot.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plants

(The Large Bell Variety.)

Ramie Seed, Fresh.

WATERMELON, CANTELOUPE AND MUSKMELON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

MIXED LAWN-GRASS ETC.

For sale at the "FARMER" OFFICE

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight years old from which 1,500 Gallons of Wine have been made this Year.

A good Orchard of 500 Trees, Five to Seven Years Old, all Good Varieties of Fruit. The Eleven Acres of Choice Land is best for Orchard, Vineyard, or Garden Crops, and there is any quantity of "Uncle Sam's" land, of the Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of means this place can be made a "little Paradise."

The House and Grounds will be sold a GREAT BARGAIN if applied for immediately, and will be sold for Less than Cost of the Buildings!

PARIS, March 26th, 1870.

THE WANTS OF AGRICULTURE.

One of the "ameliorations" most demanded by French Agriculturists is, to be legally represented by a body, analogous to a Chamber of Commerce. The machinery sketched out to effect this end, would be something equivalent to a veritable expression of universal suffrage on the part of four-fifths of the population. Commerce has want of a technical tribunal, for its interests are very complex, embracing usages and customs, and international questions, wholly unknown to Agriculture. The griefs of French moral economy—excepting that of frontier tariffs, and coming within the domain of high politics—are local and limited. They do not call for any special agricultural representation—they may be summed up in the want of a more rapid and enlarged development of the country's industrial resources, to be effected either in whole or in part, by the government.—The making of branch Railways, and the opening up of roads and water-ways, subsidizing Agricultural education, would, if settled, exhaust all the "points of the charter." The government is not ignorant of these wants—it is all a question of money. The elasticity of the Treasury has its limits. Instead of wasting time in agitating for more officialism—the bane of the Nation for years—it would be better for the French to emancipate their Agriculture from what still remains of authority, and trust solely to combined voluntary effort to force on Ministers, the redress of what is wrong—to remove what is objectionable by degrees, and to patiently wait for success.

AGRICULTURAL LEGISLATION.

France has a Minister of Agriculture—and two National Agricultural Societies, one Imperial, the other Independent—both have affiliated local Societies, and thus far the machinery, for pressing home any grievance on the Minister exists.

The National Agricultural Congress of Berlin, in 1868 had but 340 members, in 1870, 755. At its third Session just held, and attended by Herr Bismark and the Crown Prince, it was resolved to have a more direct representation of Agriculture in the Legislature. This is to be effected, by the formation of an Agronomic Council, elected by the various Agricultural Societies throughout the confederation, and limited to eleven members, who will form the intermediary with the Government. Since 1852, France has in its code a somewhat similar Council Board. Its utility may be estimated by the fact, that it has never been once convoked since its foundation. In a word, it is looking to, and waiting for, Government help, instead of relying on individual effort, to agitate and effect reforms, that contributes most to the slow progress of Continental Agriculture.

BELGIAN AGRICULTURE—STOCK RAISING, ETC.

From the Belgian Council of Agriculture, it appears that Sheep-farming is on the decrease in Belgium, the number now in the country being less, by two-fifths, than in 1816. The low price of wool, and the greater profit resulting from rearing black cattle, being the causes. So also has it diminished the rearing of horses, consequent on the cheapness and duplite the bounties almost, of the Government. The rearing of black cattle is very remunerative, the favorite breeds being a crossing of local races, with the Dutch and Durham breeds.

Pigs also pay, especially when crossed with English species. Grain is not regarded with favor by the Farmer. Beet root is one of his sheet anchors, and the exportation of sugar is yearly assuming great proportions. Few Provinces but are well supplied with Threshing and Sowing Machines. In two districts of Belgium, a capital was subscribed in a few hours of 150,000 francs, to constitute a Society for the hiring out of portable Steam Engines. In the Veterinary School of Brabant, one of the Professors gave a clinical lecture, on a Dog brought to the Hospital, in full furious hydrophobia, and which drank before the pupils, at least a quart of water.

CALIFORNIA GRAIN IN FRANCE.

It was bad enough as the Protectional party inform us, for Australia, ruining almost, French Agriculture by cutting down the prices of wool.—But here is the United States, following up the blow, by threatening to flood the French Market with wheat. Count Fouche de Careil, has "been over the ground"—and sees only in the Western States an immense forest of Maize and prairies of Wheat—where manure appears to be a superfluity—and the borders of such rivers as the San Joaquin and Sacramento, the types of an inexhaustible fertility. The Count accepts President Grant's statement, that "America has room for some 500 millions of people," as more than a metaphor—and looks upon the wheat producing power of the States, as a "Gulf Stream," that will sweep all before it. He regards Australia and America as two "Great Unknowns"—of whom it is necessary to watch. They are at the the gates and may enter the Capital. The only remedy he suggests is, to grow wheat in smaller quantities, and rely on the production of meat.—Some found consolation that Australia would be disposed of, when the Cobden Treaty was abolished. When, as for the States, it was not believed that soils could continue inexhaustible. One person suggested, that if America sent cheap wheat, to prefer it, to rye, for bread.

PRESERVING MEATS.

The question of preserved Colonial Meat, has just been tried, before a Committee of Parisian scientific men, and *gourmands*. A sheep was sent from London to the leading Restaurant in the city which had been killed fifty two days, and the proprietor of the establishment, invited good judges. "Chops" were pronounced of good quality, but wanting in flavor. The "leg" was a decided "failure—the fat had a flavor of old tallow—but was the consequence not of any fault in the mode of curing, but of the fatness of the animal, which undergoes this change in its adipose tissue. An animal "not forced," would have yielded a leg of mutton very palatable. A piece of La Plata beef, several months killed, was next tried, but, while affording nothing very exceptional had a wild flavor, not appreciated. Farmers were glad to hear the verdict, that preserved meat can only occupy a secondary rank, that it will never cut out the home butcher—that it is suited for a large class of consumers, and for such, a good market exists.

SUGAR-BEET CONTRASTED WITH MANGEL.

Sugar-beet is being extensively cultivated in Great Britain, as food for stock, and for this purpose it is fast coming into competition with mangel. A correspondent of the *Agricultural Gazette* says, that as a rule, the sugar-beet does not grow as large as the mangel, and therefore to insure the same weight per acre more must be grown.—To make this plain, he presumes that in an ordinary crop of large mangel there will be from 60 to 80 roots to the perch. Now, in sugar-beets there should be about 200 roots to the same area. This increase of the individual roots will compensate for their lightness, and the gross yield of sugar-beet will probably be as great as that of mangel. Already they are running each other pretty close in the Lavenham district. The heaviest crop of sugar-beet this year weighed, in the gross, 31 tons per acre. The best crop of mangels weighed one ton less, or 30 tons per acre. Weighed without tops, the mangels reached 24 tons per acre, and the sugar-beets 21½ tons. The number of mangels per perch was 100; of sugar-beets, 200

These facts and figures point out a lesson and indicate the direction improvement should take in regard to sugar-beet. Many a one who remembers the first crop of mangels, with their uncouth roots and coarse, large leaves, and contrasts them with fine stock and small leaves of the most approved sorts of to day, will see, at a glance, that the same course of selection and crossing, if needful, must be pursued with the sugar-beet.—Among the crops now there are great differences in regard to top and habit. These have been noted by the growers, and most of them are saving their own seed from what they consider the best samples. It is probable that in a few years there will be model crops of sugar-beet, with little, if any greater development of top than among the best mangels. Once this is accomplished, the roots may go even closer together, and as, bulk for bulk, they weigh heavier than common mangel, it follows that by-and-by we shall have as heavy, or even heavier crops of the sugar-beet per acre.—*Bonham's Rural Messenger.*

NATIVE WINES.

From the Report of the Commissioner of Revenue.

As illustrative of the present condition of the native wine industry of the United States, the Commissioner would ask attention to the following letter addressed to him on this subject, by a gentleman* who is everywhere acknowledged as an authority in regard to the question under discussion:

"RAHWAY, N. J., June 24, 1869.

"SIR: In a recent conversation touching the effects of the high duties levied on the importation of foreign wines on the wine produced in this country, you requested me to give you the substance of my experience in this matter, which I now do with pleasure.

"The history of our native wine trade is familiar to you. I need not, therefore, refer to the various endeavors of the pioneers in grape culture, until a perfect wine was produced from the pure juice of the Catawba grape, by Nicholas Longworth, about twenty-four or five years ago. This wine, however, in its pure state, was too acidulous to please the popular taste, but it was much relished by the German settlers of Ohio, who were accustomed to such wines in their own country. It however was a capital wine to mix with sugar and ice for cobblers, as a substitute for Sherry, and it also made an excellent sparkling wine. Some of the latter I tasted in Chillicothe, Ohio, in 1850. It struck me then that it might be popularized in New York. I opened a correspondence with Mr. Longworth, and in 1852 had the pleasure of receiving a small invoice of it—the first that had ever been in the city—indeed, as Mr. Longworth said, 'the first that had ever crossed the mountains.' [The Alleghanies.] The wine speedily became popular, and continued to be so until the death of Mr. Longworth, whose agent I continued to be until that time—a period of many years.—The still wines did not succeed so well; except for Catawba cobblers, the sale was very limited. The truth was, our people, accustomed to the heavy brandied-wines of Europe,—the Sherries, Madeiras, and Ports, with an alcoholic per centage of 19 to 24 per cent.,—did not much fancy a pure wine of only 8 to 9 per cent. of fixed alcohol. It was not strong enough. But the sparkling wines, with a slight addition of brandy or sugar, which by fermentation resolves itself into brandy, met with better success.

"At this time the sparkling Catawba could be laid down in New York at a cost a little exceeding that of the most popular French Champagne, the 'Heidsieck,' but it was sold by the case at the same price, say $14. Yet it kept its own, and sales grew larger, notwithstanding this formidable competitor. At that time the sale of Champagne was immense, but its low price (at wholesale) did not tempt imitators to manufacture a spurious Heidsieck and sell it for the real article. The market was full of good brands of Champagne, but the native wine was steadily growing in favor, without protection, and in spite of so many rivals. Another formidable antagonist in the sale of native wine was the *trade!* There was more money to be made by selling imported wines, and therefore the whole of the wine trade in New York turned its back upon sparkling Catawba; nevertheless it worked its way without recommendation into favor with the public. The heavy duties imposed upon foreign wines, during the war, diminished at once the greater part of the supply from that source. Native wines had the full benefit of protection, and, besides, were free from internal tax. And we must not overlook another great advantage in their favor: the improvements in the manufacture, the results of experience and enterprise—had produced sparkling wines far superior in quality to those of twenty or even ten years ago. For delicacy of flavor and fragrance of bouquet, the sparkling Catawba of the Pleasant Valley Wine Company; of the Urbana Wine Company; of Chas. Bottler's, of Cincinnati; of Weeke's Sparkling, and Longworth's Golden Wedding, (all of which took diplomas of 'honorable mention' at the Paris Exposition, where they were in competition with the oldest Champagnes of France,)—are so much in advance of Longworth's old wines of twenty years ago, that a comparison between them would be like (to use a homely simile) as 'cheese is to chalk,' in the list of alimentary substances.'

"But great as have been the improvements in the manufacture of sparkling wines, greater have been those in the production of still wines, from which our sparkling wines are made.

"The southern shore of Lake Erie now seems to be our proper vine land, and the still Catawbas from this favored locality will compare with credit with the very best growth of the vineyards on the Rhine.

"We may instance those delicate light wines of Kelley's Island, which are produced under the superintendence of Messrs. Kelley and Huntington, and have acquired so marked a preference in late years. For purity and excellence they may be put in competition with the wines of any climate.

"Now, under such favorable auspices, one would think the native wine trade would thrive and prosper a hundred-fold. One would think that with vast improvements in the production and manufacture of the wines—with high scientific skill in the cultivation of the grape itself—with a heavy protective duty on foreign wines, and no tax at all on wines of home growth—this important branch of our industry would have increased to magnitude corresponding to its supposed advantages.

"But such is not the fact. With such an enormous amount of floating capital, seeking investment in the country at large, no measurable amount has found its way in this direction; no vast establishments have grown up, as it were, in a day, to supply the enormous deficiency caused by prohibitory duties upon foreign wines; the old wine establishments remain nearly as they were before the war; native wines have not become a national beverage; and, except by persistent private enterprise, even these establishments would be financially wrecked, like so many others, which were once flourishing and wealth-producing. With all the *protection*, a very slight revenue tax would tax them out of existence.—They are too weak to bear this burden.

"The main cause of it all lies in this—protection of the native wine trade means a premium on spurious wines. When real Champagne is worth from $20 to $24 per dozen in *gold*, and imitation Champagne can be made for $8 per dozen in paper money, the premium is in the difference between the two sums. Vast wine cellars for the manufacture of spurious wines sprung up like mushrooms all over the land.

"These poisonous compounds, at low prices, tempt the cupidity of the dealer. The New York label manufacturer readily manufactures the label—the 'brand'—of any known wine. The whisky-distiller furnishes the stimulus, the chemist the flavor, the sugar house the syrup, and the gas-pump the effervescence. With these antagonists to contend with, good, pure wines, both native and foreign, go to the wall;—competition is out of the question.

"In the production of native wines, heavy duties increase also the costs; as, for instance, transportation. The freight tariff is increased on the railroads. All materials are obliged to be imported, bottles, corks, etc., and two freights to pay on these—duties, etc.; and then the cost of labor is four-fold in this country to what it is in France.

"Another great evil is that in the manufacture of '*domestic wines*,' *i. e.*, wines made here or compounded, a class of poor native wines, or wines of half-ripened or rotten, poorly-cultivated grapes, are eagerly brought up at low prices, and are then *doctored*, colored, whiskied, and sweetened, and sold under the names of Madeiras, Sherries, or Ports.

"This gives encouragement to the worst class of vineyardists, who, taking examples from their patrons, learn to introduce unripe blackberries, rhubarb, cider, whiskey, sugar, and water, into their vile compounds. All this stuff, being *doctored*, finds its way to the abodes of our citizens, to the hospitals, and to the communion table.—Shocking as all this may appear, yet it is true. It is in everybody's experience. He who runs may read.

"Respectfully, FRED. S. COZZENS."

We think it opportune to add a little remark to the valuable communication of Mr. Cozzens, in regard to all, concerning our native wines,—a judge and an expert, to whom we know no superior. But at the time he wrote the above letter he could have had no knowledge of the result gained by the product of the 1869 vintage.

The 1869 wines of Lake Erie, which, as we have stated in No. 37 of the *Wine & Fruit Reporter*, have been submitted to a more careful treatment than ever heretofore, and the result is a most satisfactory one. Messrs. Lemke & Co., Toledo, Ohio, by a strict assorting of the grapes, a careful picking and a rational treatment of the must, have succeeded in giving us a wine that essentially differs in some respects from all that our native wine culture has produced heretofore.—We refer about the particulars to the article mentioned.—*Wine & Fruit Reporter.*

* Frederick Swartwout Cozzens, the author of "The Sparrowgrass Papers," died at his residence in Brooklyn, N. Y., towards the end of last December. Although engaged, during most of his adult years, in mercantile pursuits, he spent most of his leisure hours in the pleasures of authorship, wrote for the *Knickerbocker* during its best days, and in 1853 collected a volume of his contributions to that periodical, under the title of "Prismatics, by Richard Haywarde." To some of the earlier numbers of the old series of *Putnam's Magazine*, he sent the famous "Sparrowgrass Papers" (reprinted in book form in 1856), which gave him a reputation as one of the first American humorists of his day. He published, two years later, a pleasant volume of travel, entitled "Acadia, a Sojourn Among the Blue Noses." Mr. Cozzens was, at this time, a wine merchant in New York, and occupied a pleasant home on the Hudson, just below the village of Yonkers, where the scene of Mr. Sparrowgrass' experience was laid. He published a little paper called the *Wine Press*, devoted chiefly to the interests of the trade, and enlivened by many readable essays in the pleasant and easy style of which he was a master.

COATES BROTHERS' WOOL CIRCULAR.

PHILADELPHIA, April 1st, 1870.

The wool season has now progressed so far that there is little to chronicle, and we can hardly expect very much trade. The country is bare of wool, as it should be at this time, and any lots yet remaining will probably soon come to market, as there can now be no policy that would lead owners to hold later in the season.—The stocks in Eastern markets are very light, unusually so for the season, and dealers are shaping their course so as to sell off their remaining lots within the next three months, and have clear floors for the new wool. We hear of some manufacturers who have bought sufficient wool to carry them until clip time, while others have all along pursued the hand-to-mouth system, and are always in the market for daily consumption; but even though the former may be stocked up sufficiently to run them through the rest of the season, yet, as usual, they will find that the new wools have a greenness about them, and not only shrink considerably at first, but do not work up so well as the old clip. In view of these considerations the desirable lots are being quietly picked up, and those who delay long will find it difficult to procure good wools to suit them,—dealers being now disposed to close out their stocks at any early date.

The heavy decline in gold has allowed some of the foreign wools to arrive at lower figures, which has caused the value of such of the lower domestic grades as are used for carpet and blanket purposes to depreciate, but the bulk of the wools have not been thus affected.

The sales for the month, of Domestic Fleece, Tub-washed and Pulled Wools, foot up about 1,010,000 pounds, within the range of 46 to 58 for Fleece, 47 to 56 for Tub-washed, and 35 to 44 for Pulled.

COATES BROTHERS,
Nos. 127 and 129 Market St.

FLAX-GROWING.

[The *Journal and Argus* of Petaluma gives us the following item about flax from that section.

We would set that Journal right, however, about the market for the flax-*straw*, for the Journal would mislead growers.

The Cotton Mill at Brooklyn will buy all the flax straw that is offered; it need not be shipped abroad, for we have a market—and a good one—here at home;—as it is to be used to make bags for our grain-growers, who laugh at the idea of shipping grain in bulk.—ED. F.:]

We have a sample of flax, grown and manufactured by John Keyes, Esq., of Tomales. The fiber is pronounced, by judges to be of uncommon length and superior quality. Mr. Keyes grew some three acres last year, and pronounces the soil and climate of Tomales better than the flax-growing regions of Ireland even for its production; but unfortunately for the enterprise, all reports to the contrary notwithstanding, there is as yet no demand for the product, excepting for the seed, which finds a ready sale at the San Francisco Oil Works. Mr. Keyes, however, thinks it is quite possible that it can be made to pay by shipping the flax East for a market.

Good Milkers.

Mr. Wm. H. White, of Bloomfield, informs us that he has among his band of dairy cows, one that is giving 60 lbs., or 6¾ gallons of milk per day. He also has a heifer, which will not be two years old until next May, that is giving 35 lbs.,—almost four gallons—per day. These cows, it will be remembered, are not family cows, but belong to a regular dairy. If any dairymen can show better milkers than these, let us hear from them.—*Journal and Argus* (Petaluma).

How to Secure Good Oats for Seed.

As we sow we shall reap, is an accepted truth. If you sow small, poor oats, you will reap the same kind. Swedish and Norway oats are the rage now; permit me therefore to propose for imitation the Swedish proceeding to obtain plump and good seed oats.

Place your oats in a heap on the middle of the thrashing floor, on the end that the wind blows to. Get a milking-stool and a small scoop—your wife's flour-scoop will do—and throw the oats, with a light turn of the wrist, to the other end of the floor, against a gentle wind. A little practice will soon enable you to throw it in a half circle and at the same distance. Sweep off now and then, if you have much, the utmost circle for seed, the light oats for feed, and the weed seed to burn. You will now have seed oats worth sowing, without buying at $5 per bushel. I have seen oats grow in Sweden until I was forty years old, but I never saw a heavy crop where the seed was not selected as above.—I. K. BEAN, in *Country Gentleman.*

Agriculture.

WHAT I KNOW OF FARMING.

HORACE GREELEY.

ESSAY NUMBER FOURTEEN.

PLOWING—DEEP OR SHALLOW.

Rules absolutely without exception are rare; and they who imagine that I insist on plowing all lands deeply are wrong; for I hold that much land should never be plowed at all. In fact, I have seen in my life nearly as large an area that ought not as I have that ought to be plowed; by which I mean that half the land I have seen may serve mankind better if devoted to timber than if subjected to tillage. I personally know Farmers who would thrive far better if they tilled but half the area they do, bestowing on this all the labor and fertilizers they spread over the whole, even though they threw the residue into common and left it there. I judge that a majority of our Farmers could increase the recompense of their toil by cultivating fewer acres than they now do.

Nor do I deny that there are soils which it is not advisable to plow deeply. Prof. Mapes told me he had seen tracts in West Jersey whereof the soil was but eight inches deep, resting on a stratum of coperas (sulphate of iron,) which, being upturned by the plow and mingled with the soil, poisoned the crops planted thereon. And I saw, last Summer, on the intervale of New River, in the western part of Old Virginia, many acres of Corn which were thrifty and luxuriant in spite of shallow plowing and intense drouth, because the rich, black loam which had there been deposited by semi-annual inundations, until its depth ranged from two to twenty feet, was so inviting and permeable that the corn roots ran below the bottom of the furrow about as readily as above that line. I do not doubt that there are many millions of acres of such land that would produce tolerably, and sometimes bounteously, though simply scratched over by a brush harrow and never plowed at all. In the infancy of our race, when there were few mouths to fill and when farming implements were very rude and ineffective, cultivation was all but confined to these facile strips and patches, so that the utility, the need, of deep tillage was not apparent. And yet, we know that crops often failed utterly in those days, plunging whole nations into the miseries of famine.

The primitive plow was a forked stick or tree top, whereof one prong formed the coulter, the other and longer the beam; and he who first sharpened the coulter-prong with a stone hatchet was the Whitney or McCormick of his day. The plow in common use to-day in Spain and Turkey is an improvement on this, for it has an iron point: still, it is a miserable tool. When, at five years old, I first rode the horse which drew my father's plow in furrowing for or cultivating his corn, it had an iron coulter and an iron share; but it was mainly composed of wood. In the hard, rocky soil of New Hampshire, as full of bowlders and pebbles as a Christmas pudding is of plums, plowing with such an implement was a sorry business at best. My father hitched eight oxen and a horse to his plow when he broke up pebbly green-sward and found an acre of it a very good day's work.—I hardly need add that subsoiling was out of the question, and that six inches was the average depth of his furrow.

I judge that the best Steel Plows now in use do twice the execution that his did with a like expenditure of power—that we can, with equal power, plow twelve inches as easily and rapidly as he plowed six. Ought we to do it? Will it pay?

I first farmed for myself in 1845 on a plat of eight acres, in what was then the open country skirting the East River nearly abreast the lower point of Blackwell's Island, near Fiftieth St., on a little indentation of the shore known as Turtle Bay. None of the Avenues east of Third was then opened above Thirtieth St.; and the neighborhood though now perforated by streets and covered with houses, was as rural and secluded as heart could wish. One fine Spring morning, a neighbor called and offered to plow for $5 my acre of tillage not cut up by rows of box and other shrubs; and I told him to go ahead. I came home next evening, just as he was finishing the job, which I contemplated most ruefully. His plow was a pocket edition; his team a single horse; his furrows at most five inches deep. I paid him, but told him plainly that I would have preferred to give the money for nothing. He insisted that he had plowed for me as he plowed for others all around me. "I will tell you," I rejoined, "exactly how this will work. Throughout the Spring and early Summer, we shall have frequent rains and moderate heat: thus far, my crops will do well. But then will come hot weeks, with little or no rain; and they will dry up, this shallow soil and every thing planted thereon."

The result signally justified my prediction. We had frequent rains and cloudy, mild weather, till the 1st of July, when the clouds vanished, the sun came out intensely hot, and we had scarcely a sprinkle till the 1st of September, by which time my Corn and Potatoes had about given up the ghost. Like the seed which fell on stony ground in the Parable of the Sower, that which I had planted had withered away "because there was no root;" and my prospect for a harvest was utterly blighted, where, with twelve inches of loose, well pulverized earth at the r roots, my crops would have been at least respectable.—When I became once more a farmer in a small way on my present place, I had not forgotten the lesson, and I tried to have plowed deeply and thoroughly so much land as I had plowed at all.—My first Summer here (1853) was a very dry one, and crops failed in consequence around me and all over the country; yet mine were at least fair; and I was largely indebted for them to relatively deep plowing. I have since suffered from frost (on my low land,) from the rotting of seed in the ground, from the ravages of insects, etc.: but never by drouth; and I am entirely confident that Deep Plowing has done me excellent service. My only trouble has been to get it done; for there are apt to be reasons—(haste, lateness in the season, etc.,)—for plowing shallowly for "just this time," with full intent to do henceforth better.

I close this paper with a statement made to me by an intelligent British Farmer living at Maidstone, south of England. He said:

"A few years ago, there came into my hands a field of twelve acres, which had been an orchard: but the trees were hopelessly in their dotage.—They must be cut down; then their roots must be grubbed out: so I resolved to make a clean job of it, and give the field a thorough trenching. Choosing a time in Autumn or early Winter when labor was abundant and cheap, I had it turned over three spits (27 inches) deep: the first being merely reversed; the second reversed and placed at the bottom; the third being reversed and placed above the second. The soil was strong and deep, as that of an orchard should be; I planted the field to Garden Peas, and my first picking was very abundant. About the time that peas usually begin to wither and die, the roots of mine struck the rich soil which had been the first stratum, but was now the second, and at once the stalks evinced a new life—threw out new blossoms, which were followed by pods; and so kept on blossoming and forming peas for weeks, until this first crop far more than paid the cost of trenching and cultivation."

Thus far my English friend. Who will this year try a patch of Peas on a plat made rich and mellow for a depth of at least two feet, and frequently moistened in Summer by some rude kink of irrigation?

THE FARMER.

But for him, what would become of the mechanic, or the manufacturer? But for him, the occupation of the merchant, the miner, the artizan, the professional, the idler, and those who are said to live by their wits? Under, and through a munificent Providence, he not only furnishes for all the "staff of life," but the material for manufacture and commerce. His occupation and its results are the true foundation of the prosperity of all others; and yet how little is this great fact appreciated?

Let us suppose, for instance, that the agriculturists, including all its branches throughout the world, agree and resolve that they will suspend all operations in their line for one year—until January, 1871, what think you would be the condition of the civilized world by that time? We can conceive it possible for them to do that thing and live comfortably through it, but what would become of the rest of the world? Before that period had rolled round, or at least before another crop of cereals could be produced, the last crust would have been eaten, the last pound of meat would have been consumed, the last pound of cotton, flax and hemp would have been spun; millions of laborers in all departments of industry would not only be out of employment, but without bread or the wherewith to sustain life. Picture to your imagination such a condition of things, and then tell me what other calling or pursuit of man, being totally suspended for the same length of time, could produce such a state of things, if you can?

The consolatory fact, that there is no human probability that such a thing will ever occur, does not militate against the idea here sought to be inculcated, to wit: the great importance of the agricultural interests of the country; the interest most neglected, most oppressed, most despised, most degraded, and least understood. In all the plans and schemes for the education of our sons and daughters, this is the least thought of; of all subjects of legislation, this is the most neglected; the hard burdens of taxation, either direct or indirect, are placed upon it; if soldiers are wanted for the country's defence, this interest must furnish the largest portion and bear the largest portion of the expense; if a public debt is created, it must be taxed to pay the largest portion; but if the emoluments of office are to be enjoyed, it must put up with a moiety; or if laws are to be made, why they cannot have much to say about them; —they are only plain, ignorant farmers, and should not presume to meddle in such matters.

Now, brother farmers, is not this a true picture? Is it overdrawn in any particular? I maintain, and I believe you will agree with me, that it is not. Then, is it right it should be so? Is there any necessity that it must remain so? I say not. Then, what is the remedy? I have heretofore endeavored to point it out, but I may be in error; —if you see it please point it out. I claim to be honest, earnest, and open to conviction, and if you show a better way, none will be more willing to pursue that way than your humble servant.—But if you concede me right, what can I do without co-operation? Individual effort is good and important, but in a great reform, combination of the same is absolutely necessary.—*Rural World*

A young man of limited intelligence, who was recovering from a long fit of sickness, being told by his physician that he "might now venture on a little animal food," exclaimed: "No you don't, doctor; I've suffered enough on your gruel and slops, and you don't get me to touch any of your hay and oats."

Chicago is to have a *million dollar hotel*, which will cover an acre and a half of ground, and it is said will be the largest in the world.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent, Barley Meal, 13 per cent, Oat Meal, 18 per cent; Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock and as a safeguard against sudden changes of weather or over-driving it has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving the quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the meal of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase the bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $40 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

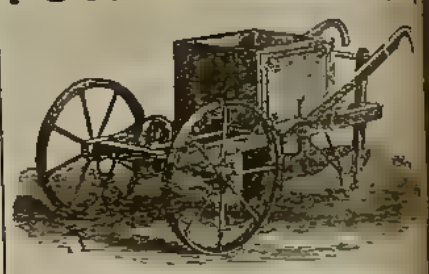
TRUE'S IMPROVED POTATO PLANTER,



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such manner slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over the ground that can be plowed.

No intelligent farmer can fail to see that an instrument with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value—because the days in which PLANTING can properly be done are very few, while he has all summer and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it. Particulars and Catalogues can be had at our office.

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection of BOTANY, ICHTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed, and the celebrated Du Chaillu GORILLA, which was exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from

Horticulture.

FRUIT GROWING.

ADVICE TO NEW BEGINNERS.

We are in receipt of a great number of letters making enquiries as to Small Fruit growing—how to be successful, etc. Friends, these are hard questions for us to answer, for all localities and all persons. Many fruits that are profitable in one locality are not in another, while varieties that will succeed and prove profitable in the hands of one person, with his manner of high culture, etc., will prove a failure in the hands of his more careless and slovenly neighbor. Our first advice is: Procure land as close to a town as possible. If you intend to go into fruit largely, you must calculate to locate where plenty of picker are to be had. We would prefer to pay two hundred dollars per acre for land for this purpose, that lay within a mile of town, than one hundred dollars per acre if over a mile, or fifty dollars per acre if over two miles.

Let any person calculate the difference in interest on the cost of such land, and compare it with the disadvantages one works under with it away from all the conveniences that surround the first named locality, and they will see the force and importance of our statement. Help must be convenient and plenty if you would be successful—Manure should be as close by as possible. The market, express office, and railroad or steamboat station near by; all of these have their importance, that cannot be fully appreciated and valued until tried.

The best soil for growing Small Fruits is of a light sandy or loamy nature, one that is easily worked.

The next thing after securing your land is to go around among fruit growers in that locality, and learn from them what varieties succeed best with them. Read different works on the subject, and last, but most important of all, visit the grounds of some successful fruit growers, "have your eyes and ears open." A few hours on such grounds will be of more practical value than reading all the works on Small Fruit yet published.

There are certain tried sorts that have proved profitable and a success wherever grown.

Another important thing to be remembered is, to set an assortment of Small Fruits—strawberries, raspberries, blackberries, currants, gooseberries, and grapes, and of there early, medium and late sorts. By so doing, the grower can be more independent of the seller. He is more certain of making his business pay, for if one sort fails, another will not. The great trouble with many growers is that they will set out nearly all their ground to one variety, and if this fails, their main dependence is gone; while if they had had others to fall back on, they would have come out right.

Don't try experiments too largely, especially if your means are small, and instead of building air castles, go right to work with a will and build up a permanent business. Don't let a little drawback discourage you—such as low prices some seasons, or a late spring frost, or hard winter. Remember these things will drive many out of the business, and that those who keep right along, year after year, will have the benefit of the seasons of high prices.

We know that there are years when the winter preceding and the season following are universally favorable to the full fruiting of all kinds of fruits, and that in such seasons the amount marketed is so large as to cause prices to drop to a low figure; but let it be remembered that such seasons are exceptions and not the rule, and that some seasons one locality is favored and another not, and other times *vice versa*. In our long experience in growing fruits, we have found that our crops of Small Fruits net us just about the same money every year; for when the crop is large, prices are lower, and when small, higher. We have, however, some years, had large, full crops, when the crop in other localities would be light and in such seasons our profits would be enormous. The summer of 1865, we believe, we sold over four hundred bushels of strawberries, that averaged, in the Chicago market, $10 per bushel. This was owing to the crops being cut short in other localities.

STRAWBERRY CULTURE.

HILL AND ROW SYSTEM.

We have noticed for the past few years that when runners have been kept off from plants until quite late in the season, and then allowing a few to grow and take root, that the young plants formed from such were very strong, and bore large crops of fruit the following season. This can be accounted for from the fact of the plant having the full strength of its root, obtained a strong, full growth, and where a few runners were allowed to grow and root, they partook of the strength and vigor of the parent plant.

We have therefore, satisfied ourselves from experiments that this is one of the best, if not *the* best, methods of growing strawberries, both for home use and market. By thus keeping the runners off until late in the season, it gives a chance to work the rows out clean with cultivator and hoe up to the time when weeds stop growing, or do a few do grow they cannot ripen their seed.—Then, by allowing the runners to grow, and passing through occasionally with the cultivator to keep them running in the row, and the ground stirred up, just enough plants will form between the original or parent plant to form a matted, narrow row.

These rows will yield as fine fruit as those kept strictly in hills, while at the same time, by hoeing out the old plants every two or three years, and leaving a new plant between each old original plant, the bed is as good as new each year—in fact, we believe it to be one of the best "renewal" systems that can be practiced, and the only one that will produce large crops of large fruit every season. Of course these several plants that are allowed to set should be cleaned out after each crop and runners kept off same as before.

Our stock of the SALEM, is by far the largest and best in the country and warranted genuine.

Strong plants of the SALEM, packed free, at $1,50 each, $9,00 per doz., or $35,00 per hundred.

ROGERS Nos. 4, 15, and 19, $1,00 each, $6,00 per doz and $25,00 per hundred.

MARTHA, HUMELAN, and WALTER, (new and promising varieties,) $2,00 each or $12,00 per doz.

VINES packed with great care in double boxes. Secure from frost or heat, either by Pacific Rail Road or the Isthmus route.

For further particulars, or Illustrated Circular, Address

I. H. BABCOCK & Co

5-33. Lockport, New York.

CRANBERRY PLANTS, GRAFTING WAX, OIL PACKING PAPER.

CRANBERRY PLANTS by Mail, 50 cts. per 100—$4 00 per 1,000—postage paid. The kinds best adapted for Cultivation are—Early Black Bell, Large Mottled Bell, Round and Oblong Cherry. For moist land—Bugle, Early and Large; the best of all is the Mansfield Creeper. Habit differs from the other varieties; Fruit very large; great runners and bearers; best adapted with the Bell variety for Upland Culture.

For Description, Mode of Cultivation etc., enclose stamp for Circular, or 25 cts. for "Cranberry Culturist"

Grafting Wax

Of Superior Quality, in Small Packages for use.

OIL PACKING PAPER,

For Mailing and Packing Plants; a heavier article for covering Hot-beds, Manufactured and for Sale by

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop'rs.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting

We have them put up in Packages of ONE DOLLAR EACH, MAILED free to purchasers.

WARREN & Co., FARMER OFFICE,

GOLDEN EAGLE

HOTEL.

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the past year, is more than double its former size, with splendid suites of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night.

D. E. CALLAHAN,

33-1 PROPRIETOR

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING APRIL, 21st, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their *special* attention.]

☞ Next week we have several very interesting letters to lay before our readers.

We commend the letter of our highly-esteemed correspondent, whose "Stray Leaves from Margaret's Journal" are always so much valued by our many readers.

"Nellie's Letter to Grandpa" is one of the sweet blossoms of childhood's innocent thoughts; and their loving fragrance are twined with the pet flowers under her care. "Jenny Dare" will be happy in knowing she has called out little Nelly.

BENECIA AND THE COLLEGE.

We shall speak of these Institutions and of Benecia in our next.

BLOSSOM ROCK.

The great experiment of our day will be tried on Saturday next; its result we will report next week. As this is a great scientific enterprise, the result, if successful, will be of advantage to the world.

COMPLIMENTARY.

We acknowledge a complimentary card to the Grand Picnic of the I. O. O. F., at Saucalito, on the 20th inst., which we hope to be able to enjoy; for under the wise and careful management of this most-excellent "Band of Brothers," we feel confident they will make it a most enjoyable affair, for all the elements will be conjoined to make it so;—the Spring-time and blossoming of flowers—a beautiful place—warm hearts and generous welcome—must make the occasion one of more than ordinary interest. Grateful thanks for the kind courtesy.

BOOKS.

The "Sulphur Cure" for the Vine disease, is the title of a little book of 100 pp., from the well-known author, W. J. Flagg, Esq., who has written much upon the Vine.

This book treats generally upon the *mildew* on the Grape, and gives its history, cause, and cure. It is a practical book, and will prove of great service to, aid in removing this hindrance to the prosperity of the Vine.

Published by Harper Brothers, N. Y., and for sale by A. Roman & Co.

"*A Brave Lady.*"

This is the title of another book from the author of "John Halifax, Gentleman." This book, coming from so popular an author, will be sought for and read, confident that it will prove a very readable book. Harper Brothers, Publishers; also for sale by A. Roman & Co.

NEW STYLE FURNITURE.

Messrs. George O. Whitney & Co. have just received and are now offering New Styles of Furniture from Boston, of entirely new patterns.—Parlor and chamber sets, of new designs, all of unique and very beautiful work and finish.

As we claim to be a Bostonian, perhaps we are partial to Boston-made furniture, but, in reality, we know Messrs. Whitney & Co. make superb furniture here of our California woods, and by California workmen; but some of their new styles are so beautiful that we call them "Boston styles," and we think purchasers of rich furniture will admire them also.

Mr. Whitney, of this firm, is *the* pioneer furniture man of our City, as his many patrons well-remember; and Mr. Kimball, the partner of this house, is a Bostonian, long engaged in this business in Boston, and familiar with the trade, so that this firm—with their extensive warerooms, full of rich home made furniture, and numerous workmen, added to their large importations from the East—can always supply furniture of the richest and best kinds, and at the lowest terms.

THE GARDEN IN BLOSSON.

The Blossoming time has come and the trees are now in their brightest robes, the earliest blossoms have had their day, and the young fruit is already formed, but now the Cherry, Pear, Plum and Apple, are showing their flowing robes of blossoms.

During the early part of the week we made a visits to the

"GARDENS OF THE ALHAMBRA,"

at Martinez in company with I. S. Pratt, Esq., of Chicago, a Gentleman whose letter on Fruit Packing will be found in this number. Mr. Pratt has had many years experience in packing and shipping Fruit, and we were desirous he should see the Gardens of the Alhambra, confident that this was the largest Orchard and Vineyard of choice Fruits, on this Coast for here are found in their season in addition to all the ordinary kinds of fruit—the Orange, Lemon, Pomegranate, Fig, Olive, Prune and Quince, in large quantities, each in their season.

The Gardens of the Alhambra at this time are a Picture of Paradise, the Orange trees were covered with large and delicious fruit, the luciousness of which we had a positive proof by the r flavor, in addition to witnessing their beauty on the trees.

The Cherry trees were like fountains of foaming waters, pyramids of blossoms, other trees in thousands are in heavy bloom. The Quince trees give great promise by their bloom, the Fig trees were loaded with fruit now as large as pigeon's eggs, Pears had formed their fruit, and give great promise. The Grape vines have started forward with race horse speed, the vines have grown from six to eighteen inches with a great show of fruit. This is some contrast to the season in the Eastern States, where they are now enveloped in snow and ice while we are among the blossoms and revelling on Strawberries and Cream.

The "Gardens of the Alhambra" is one of the Edens of the Pacific, and the condition of the large and grand Orchard and Vineyard reflects the highest credit upon its skillfull proprietor Dr. J. Strentzer, who has so often borne off the highest prizes at our State and District Fairs.

The "Garden of the Alhambra" nestles in a beautiful Vale, surrounded by high hills and just now in their white Dress, are like a child in rich robes nestling in its cradle.

We were specially pleased to visit these grounds now and show our Chicago friend the Home of some of the finest fruit grown in our State, and have him taste some of the best wines ever pressed in California from the Isabella or Catawba, whose "Aroma" remains upon the lips long after the wine has left them.

We shall long remember the hours spent "among the blossoms" where the beautiful in nature is only excelled by the kind and courteous hospitality ever found at this Eden Spot.

SEASON—CROPS—PROSPECTS.

We can only reiterate what we have said for many weeks past, and what we have believed for months past would be enjoyed this year—and that was, a very delightful Spring, a grand and strong set for grain and grasses, and a large crop of all the productions of the earth.

While we say this, we do not say there may *not* be spots of earth—places in several districts and localities where the crops are not so good, or where there is not a *seeming* failure of that good look which denotes prosperity—but wherever we have seen this unfavorable prospect we have easily traced it to a cause which, if rightly understood and managed by an intelligent mind, the cloud upon the prospect would have been removed, and a sunlight would have been there.

These instances of the failure of the crops, in nine-tenths of the cases, arises more from a want of knowledge of the soil, or an intelligent system of culture, or the crop suited to the soil, and the proper season of planting—rather than to an unfavorable season, or any other natural cause. The cultivator of the soil should thoroughly understand the soil he cultivates—its elements of fertility, and the right crop for that soil, the right manner of tillage, and all its wants. Then success will assuredly follow; we are truly glad to see in various parts of our State, a great improvement in this respect; for here in California, the Farmer, to be prosperous, *must* study his profession; he must *read, mark,* and *learn* his occupation, as much as the mechanic or manufacturer, or any other professional man; and the great error, and the cause of so much loss and so many failures on farms, arises more from a want of knowledge than any other cause.

THIS NUMBER.

We call the attention of our readers specially to the important matters in this number.

The Grain-growers should carefully read what our European Correspondent says of California Grain, and how it affects the French markets.

We would say to France—California has only *begun* to send you Grain; we will give you *some* this year. Grain-growers should note the seasons there.

Farmers! read what Horace Greeley says of *deep plowing;* it is worth remembering.

Fruit-growing. We give some good counsel in our "Horticultural" column, collated from Purdy's excellent book on "Small Fruit Growing."

A capital essay upon "Our Relations with England," we take from *Harpers Magazine.* Every lover of our country should read it; that is the doctrine!

The *Farmer!* who he is, and what he is by his influence, is very truly pictured in the article we copy from the *Rural World.* The readers of the CALIFORNIA FARMER will recognize in the sentiments of that article the *same doctrine* we have urged for long years.

If the cultivators of the soil wish to have their own interests cared for and justly appreciated, they must *educate themselves* to take a front rank in society.

VINEYARDS WITHOUT IRRIGATION.

We notice many paragraphs in various Journals over our State, announcing that it is supposed Vineyards could be cultivated and made very prosperous without irrigation. Such Journals are behind the age, for some of the best Vineyards in our State have *never had irrigation.* In fact, wise cultivators—those that know the nature of the Grape—know that the fruit is always better *without* irrigation, as the roots of the Grape love only, and feed only, in warm, dry, and well-pulverised soil. Deep *cultivation* is always better than *irrigation.* The Grape demands a deep, well-pulverised soil—the deeper the better; the roots then will find and take up all the moisture it needs. The Grape needs *drainage* more than irrigation; and all persons who formerly saw the Los Angeles Grapes that were shipped here, remember they were *half white,* while our mountain-side Grapes are a deep purple. The irrigated Grapes are always cold and watery, while Grapes in dry, warm soil, are rich and sweet.

Our mountain-sides, when rightly cultivated, deep and fine, need no water for the Grape; the Grape-roots will take care of themselves; they can be planted by the sides of rocky boulders, and they will cover unsightly rocks, while their roots will run down by the side of the rocks and find nourishment, while their large, rich, sweet clusters will lay upon the rocks in great luxuriance.

EMIGRATION MOVEMENTS.

We hear very little now about the "Emegrant Aid Societies," or appropriation of offices with fat salaries, and we rejoice that such things were not foisted upon our State. Enough was done however, to do an injury to the cause of wholesome Emigration by the absurd doctrine advanced by many political or partizan wire pullers.

California will have all the new comers we can take care of or find room for, in a healthy point of view, as this Journal has all along opposed the importation of the Paupers of Europe, or its poor and ignorant masses, so we oppose it still—for we are confident we shall have all the new comers we need, and they will be of the right character too, for we shall have men of property, intelligence and business capacity, and they will bring their families, and their influence will be for the highest good of our State. This is the class of visitors we need, and these we must and shall have, and we need no others.

Our State has the capacity to sustain millions of inhabetants, for we have now over FIFTY MILLIONS of acres of good land fit for cultivation, yet untouched. These acres await the coming of that class of settlers that will give to our State permanance, dignity and prosperity.

MARKET ASPARAGUS.

The Asparagus in our Markets is but little understood by our housekespers. Fancy takes the place of knowledge and judgment, and many persons purchase the poisonous *white* instead of the healthy *green,* which is the only kind fit for use.

Purchasers of this most delicious and healthy vegetable should bear in mind that of the white Asparagus, only about one quarter of it can be eaten, and that is often very bitter and unsavory, while the green is always sweet and delicious, and generally seven-eighths of it can be eaten.

The white is grown under ground, and before the color changes to green, is poisonous and tough, while the green is perfected by the sun, and always healthy, the cost of the white is four times as great as the green, because only a portion can be eaten, and never so good—those that use it, do so for fashion sake, or from an acquired taste.

The white is cut below the ground with a knife, whereas the true way is to break off the green at the proper hight as it appears. The good will snap like a pipe stem—that which will not should never be used for it is the seed bearing kind, and not fit for the table.

If cultivators will try this they will find good customers and at better prices than can ever be had for white.

CALIFORNIA PEARLS, DIAMONDS, ETC.

California is not only a Gold and Silver-producing country, but here, too, are found Precious Stones, Pearls and Jewels rare.

Upon the beach at Pescadero are found a thousand varieties of beautiful stones; while our mountains and river-beds produce Diamonds rare and wonderful, but these riches are not yet understood.

Lower California has been but little explored, and the Gulf of California is now the Pearl Fishery which soon will astonish the world.

The Revenue returns for 1869, received by last mail from City of Mexico, show that the catch of Pearls and Shell for the past year, on the Gulf Coast of the territory granted to the "Lower California Company," amounted to the large sum of $76 000.

This, of course, is the valuation of the Pearls given by the divers and speculators, and is consequently very much below the actual value of the catch.

A Pearl is frequently sold for $20, which, re-sold at Panama for $200, brings $1,000 in Paris; and in many cases much greater profits have been made on very fine gems.

Not over one-half of the catch is ever reported to the Government, and the yield of the Gulf, for 1869, may be safely estimated at $300,000 in gold.

FRUIT PACKING—FRUIT-SHIPMENTS.

We call the attention of our Orchardists to the letter upon this subject, in another column, from I. S. Platt, Esq., who has kindly given us his views on this all-important subject.

Having spent several days in company with Mr. Platt in visiting some of our best orchards, and in meeting our Fruit-raisers, we shall be enabled to lay before our readers many kinds of information which will be of advantage to them the coming year.

Home Correspondence,

PACKING AND SHIPPING FRUIT.

EDITOR CALIFORNIA FARMER:

Dear Sir:—

It is well known that most of the shipments of California fruits, to the Eastern States, have proved unsuccessful.

The reasons, perhaps, have not been well understood. Few of them have arrived there in fair condition. Gathered mostly from the stock in our markets—in apparent good condition at the time—re-packed in deep boxes, and after thus being twice handled over, subjected to the jostling of a shipment of more than two thousand miles—it is not surprising that many boxes, on opening, present more the appearance of jelly than of whole fruit.

It is quite possible to change all this, and make the shipments profitable.

Boxes lighter in construction may be made firm and strong by adding a centre-piece of the same length and breadth of the headings. In that case, the whole material of the boxes may be thinner.

In packing grapes, sawdust, bran, etc., should not be used. The face-side should be downward—the boxes not over four inches in depth—a simple lining of white paper (no wrapping of bunches or clusters), and the whole mass made as compact as possible, without crushing the grapes. Cherries may be placed in like boxes, in layers, with one thickness of paper between. Light fancy or paper boxes can seldom be so secured as to carry the fruit without damage.

It has taken our Eastern fruit-growers many years to acquire the skill of picking and packing fruit in a manner safe for long shipments; and, of late years, many peaches are sent from Illinois and Michigan to Montreal, and sometimes to New York and Boston. Considering the heat in which they are subjected, in August and September, this is more trying than shipments from San Francisco to Chicago.

If pears and plums were picked in the earliest state consistent with their ripening, and packed in boxes not more than eight inches in depth, they might stand a shipment of six or even eight days, and still be in plight for market.

Of course the tenderer varieties should be excluded, and the packing should always be done when the fruit is grown. The cars should be well ventilated; narrow strips of at least one inch thickness should raise the boxes from the bottom of the cars; other strips, say of half an inch thickness, should be inserted between each layer of boxes, and the whole bulk so braced or wedged that each box should be held securely in its place until it has reached its destination.

While freights remain at present rates, it is obvious that none but the choicest fruits will warrant long shipments, and compete with Eastern fruits.

That all errors in shipments shall be corrected in one season is not to be expected; but the surplus California fruits will find a reliable and steady market in the Eastern States whenever the shipments are placed in a more healthy condition.

Reductions in freight will, no doubt, be made whenever it is demonstrated that the fruit can be sent in quantities, steadily and profitably, into the Eastern markets.

Yours truly,

I. S. PLATT.

ABOUT TURKEYS.

[We have received the following letter from the gentleman to whom it was addressed. We presume it was sent to us for a reply, and this we cheerfully give. As far as information can be gathered, there are, at this time, none of the new breeds of Turkeys here, except in a few instances, among our private bird-fanciers.

The largest in our markets generally weigh 14, 16, 18, and sometimes 20 lbs., dressed; on foot they weigh 25 lbs. or more.

We learn that some of these famous 40-pound Turkeys will soon be introduced here for sale, by the poultry-growers at Fruit Vale.—ED. F.]

WEST FARMS, Westchester Co., N. Y.,
March 18th, 1870.

W. BLANDING, Esq:

Dear Sir—As you are connected with the State Agricultural Society, I take the liberty of addressing you, to enquire about the turkeys of your State. I wish to ascertain the weight of the heaviest turkeys you have there. The best gobblers we have here weigh 40 lbs. and hens 22 lbs. I have heard that there are some much heavier in California; if so, I wish to get some of them.

Will you please have the kindness to make enquiries, and let me know about this subject at your earliest convenience, and greatly oblige,

Yours truly,

WM. SIMPSON, JR.

NELLIE'S LETTER.

SACRAMENTO, April 17.

DEAR GRANDPA.

I must write and tell you about my bulbs, they are so beautiful. The white and purple are in blossom, but the others are not out yet; I hope they soon will be, for I think that one of them will be double, and it will be so beautiful when it is in blossom. I watch them every day with delight, longing for them to come out, so I can tell what color they are.

I hope your foot is all well Grandpa, so you can walk about. I read my letter in the FARMER, and I wondered if "Jennie Dare" had seen it yet, she thinks that I have a flinty little heart—you don't think so, do you Grandpa?

The first of May I shall have vacation, and then I am going in the country to have a good time and pick wild flowers. Oh! wont that be nice Grandpa? It does me so much good to run and play in the fields, for I cannot run in the city.

From your Affectionate

LITTLE NELLIE.

STRAY LEAF FROM MARGRET'S JOURNAL,

Petaluma, Cal., Easter Sunday, April 17th 1870

EDITOR CALIFORNIA FARMER:

This is Easter Sunday! What a lovely morning! The sun is warm and pleasant, the air cool and delightful. How sweet the aroma of the newly blossoming fruit trees! The air is filled with perfume and vocal with the songs of birds. How they seem to rejoice, as they hop from branch to branch and trill their sweet melodious cadences to one another! All nature rejoices in its vernal loveliness and it seems good to be, to live, and move in this beautiful world.

Not feeling strong enough to go with the multitude who throng the earthly temples of God to praise His name with thanksgiving and songs of rejoicing, I have seated myself on the ground under this spreading Fig tree, just budding with leaf and fruit, to enjoy the harmonies of nature, to meditate amid these myriad beauties of sky, air and earth. Dear old mother Earth! how I enjoy thus reclining upon thy maternal bosom and gathering strength from contact with the freshly turned sods of the garden!

If it could only be always morning, always spring! Why these changes to the sultry heat of noon, the chilly damp of evening and the darkness of midnight; the scorching suns of Summer, the somber fogs of Autumn and the dismal frosts of Winter? Why this variety in external nature? Why these mixed conditions in human life?—Doubtless there are reasons in the very nature of man for all these changes in his external surroundings. It seems to us as if we could always enjoy the sweet Spring-time in its vernal beauty, the freshness of early morning with the glad sunlight on our pathway, but, we cannot tell, for no mortal has ever experienced a continuance of any one state of life, either in himself or in external nature.

Birth, infancy, childhood, youth, maturity, and then old age. This is the order of human life—These stages succeed each other as surely as morning, noon, evening and night: as Spring, Summer, Autumn and Winter, in the seasons of the year. There must be some necessity for this or it would not be thus. Without change there can be no progress. Nations like individuals, have their infancy, youth, maturity and old age, containing within their own organism the elements of growth and also of decay. So also have Churches or Religious organizations. They rise and flourish, mature and decay. Yet in them all there is a principle of life which cannot die, but puts on new forms of use and beauty, when the decaying husk enveloping them, they are laid aside as worn out.

How many sweet and comforting thoughts crowd my mind, as this truth of the constant, onward progress of the soul, through all the changes and changes of this mortal life—yes, and of the immortal too, becomes clearly seen in its wonderful order and beauty.

Nothing in our external lives is constant and fixed, because nothing in our internal, is permanent. We are so constantly changing that at no two consecutive moments are we ever the same—The particles composing our bodies are constantly decaying and being renewed, because the forces of our soul-life are being continually changed—The new is ever taking the place of the old. Why then should we regret these changes thus perpetually recurring in ourselves and those around us? We have the promise not only of "new heavens" but "a new earth wherein shall dwell Righteousness." Each of us can do something to aid in forming this new earth, for it will correspond to and represent the minds of those who dwell upon it as truly as does the present image forth the state of men and women around us.

I am so happy, this beautiful Easter morning, that I can realize something of the joy of the women unto whom our Lord first appeared in His glorified Human form after His resurrection. My soul is lifted up above the low and grovelling cares of earth, into a purer ether, a diviner air, as I sit in this genial sunlight and breathe in this invigorating atmosphere. "The Lord is in His holy Temple, let all the earth keep silence before Him," what a sweet tranquility reigns around and within me! Surely this beautiful world in its verdant freshness is the house of God! How beautiful must He, the Creator and former of so much loveliness be in the heaven of heavens, where there is no night but where "perpetual spring abides and never withering flowers."

Is not this the secret of true happiness to enjoy the present, trusting to our wise and loving Father for all in the great future. If clouds thicken and obscure the sunlight, if the storms beat upon and destroy our brightest flowers, yet we know that "behind the clouds, the sun is shining," that other flowers will bloom in fairer beauty to adorn our gardens. When the gay morning hours yield to somber night, and their mornings no more bless our vision with more radiant loveliness and enchanting beauty. So in our own lives, though we have passed the bounds of happy childhood and the gladness of maturity, and are now looking down the hill toward sunset. Yet we know that nothing of us can die except the dust belonging to earth,—that our souls will continue to live when these garments of flesh are laid aside forever.

The Church, to-day, celebrates the Resurrection of our Blessed Lord. Even now we can hear the Angel voice which said to the weeping Mary, "He is not here! He has arisen!" We also hear the words of the Master; 'Because I live, ye shall live also." The body returns to its native earth—"ashes to ashes—dust to dust," while the "spirit returns to God who gave it." Imperishable, indestructible as He who gave it birth, it rises from the decaying body in the same human form to continue to live and progress in Wisdom, Love and Power forever and forever.

"We bow our heads at going out,
And enter straight another golden
Chamber of the King, larger than
This, and lovelier."

"HOADLEY" "RUSSELL!"

HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.

IMPORTANT

—TO—

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

WARREN & CO.,
Farmer Office, 320 Clay Street, San Francisco.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the Early Rose is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco

FRESH ALFALFA.

THOSE WHO DESIRE TO SECURE

FRESH ALFALFA SEED,

Should send in their orders early this year. Last year there was a very short supply, and what is Imported this year will be sold early. Letters of inquiry, and orders received at the

FARMER OFFICE,
320 Clay Street, (up-stairs.)

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains:

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

GENERAL AGENTS FOR THE PACIFIC COAST, Nos., 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

"N" FOR NANNIE AND "B" FOR BEN.

"N" for Nannie and "B" for Ben;
I see them now as I saw them then,
On the bark of the oak tree wed,
She sat waist-deep in clover white,
And the liquid gold of June sunlight
Swept over her sweet young head.

And I stood carving the letters twain,
That time and tempest have all in vain
Striven to blur and blot;
They live in the oak tree's dusky grain,
Stamped as their memory on my brain,
Changing and fading not.

Oh! the vows that I vowed that day,
Their broken shreds in my bosom stay,
Wounding it hour by hour.
Could I be false to one so true?
Dared be cruel, my love, to you,
Nannie, my lily flower?

Ere the snow had whitned those letters twain,
In the old church porch you hid your pain,
As my bride and I passed by;
Your eyes were brave, but your cheeks grew white,
The cheek I should have pillowed that night
Where it never now may lie.

Little Nannie, you are at rest,
The butter-cups growing over your breast,
Close by the graveyard gate;
But ah! I live to rue the day
Gold tempted my steps from love away,
And mine is the sadder fate.

For I'd give the rest of my life to-night
To see you sit in the clover white,
The sun on your locks of gold,
And carve once more as I carved them then,
"N" for Nannie and "B" for Ben,
[On the bark of the oak tree old.

COURAGE.

BY MRS. CELIA THAXTER.

Because I hold it sinful to despond,
And will not let the bitterness of life
Blind me with burning tears, but look beyond
Its tumult and its strife;

Because I lift my head above the mist,
Where the sun shines and the broad breezes blow,
By every ray and every rain-drop kissed
That God's love doth bestow.

Think you I find no bitterness at all,
No burden to be borne, like Christian's pack?
Think you there are no ready tears to fall,
Because I keep them back?

Why should I hug life's ills with cold reserve,
To curse myself and all who love me? Nay!
A thousand times more good than I deserve
God gives me every day.

And in each one of these rebellious tears,
Kept bravely back, he makes a rainbow shine.
Grateful I take his slightest gift; no fears
Nor any doubts are mine.

Dark skies must clear; and when the clouds are past,
One golden day redeems the weary year.
Patient I listen, sure that sweet at last
Will sound his voice of cheer.

Then vex me not with chiding. Let me be.
I must be glad and grateful to the end.
I grudge you not your cold and darkness,—me
The powers of light befriend.—[*Atlantic Monthly.*

UNDER BROADWAY.

You of course all know that Broadway is the principal street of New York, and some of you have heard of number 245 Broadway. I said, last month, something of the sights to be seen on the street. Indeed, I think that a walk up or down Broadway, on a pleasant day, is more interesting than any show I ever saw. It now appears that to see all the sights of Broadway one must go down underground. In a very quiet way, there has been a company of men at work making a large tunnel or bore directly under the street. It went by the office of the *Agriculturist* before our friends there, who think they are pretty wide-awake, knew anything about it. Well, I don't wonder, as all the work was done 25 feet under the surface, and the earth loosened in digging was all taken out at the basement of a large marble building, in so quiet a manner that only those in the secret knew anything about it. There the men are at work like moles or gophers, slowly digging a hole eight feet in diameter. You will wonder what they are doing it for. They are making a big blow gun! I suppose that every boy has blown peas through a tube. This underground channel, which by the way, is all walled with brick or iron, is the tube, and an immense fan, driven by a steam engine, does the blowing..... "*The peas!*".....Oh, they are cars that are blown from one end to the other. The affair is called the Pneumatic Transit. Pneumatic is pronounced *newmatic*, and is from a Greek word meaning air. The company proposes to send parcels, and people, too, I believe, from one point to another, more rapidly than can now be done. A similar thing is successfully at work in London. It is, in fact, a sort of sailing by land with the breeze quite under control.—*American Agriculturist.*

"My dear Lucy, I am surprised at your taste in wearing another woman's hair on your head," said Smith to his wife. "My dear Tom," replied the wife, "I am equally astonished that you persist in wearing another sheep's wool on your back."

BE TRUSTY AND TRUE.

When Lord Wellington was commander of an army in India, a certain rich man offered him five hundred thousand dollars for some secret information, on a very important question. Wellington looked thoughtfully a few moments, as if he were weighing the temptation; but he was not. He was only considering the best way to answer his tempter. At length he said:

"It appears that you can keep a secret, sir?"

"Certainly," replied the man, feeling sure that he had gained his point.

"So can I," rejoined Wellington "Good morning, sir." And the man went away with a chop-fallen air.

Thus, you see, Wellington was proof against corruption. He rejected a *bribe of a half million dollars!* Wasn't that noble? Yes. Very good. Stick a pin in this fact, and make this resolution: "I will be true and trusty too. I will never betray my trust. Millions of money shall never buy me to do wrong."

Make this resolution and keep it, my children, and you will always respect yourselves and be respected by others. You will never cheat nor steal. You will never be robbers of banks nor betrayers of trust. You will be trusty and true.

"When a stranger treats me with want of proper respect," said a philosophic poor man, "I comfort myself with the reflection that it is not myself he slights, but my old shabby coat and hat, which, to say the truth, have no particular claims to admiration. So if my hat and coat choose to fret about it, let them; it is nothing to me."

Richard Baxter said: "I must confess, as the experience of my own soul, that the expectation of loving my friends in heaven principally kindles my love to them on earth. If I thought that I should never know, and consequently never love them after this life, I should number them with temporal things, and love them as such; but I now delightfully converse with my pious friends, in a firm persuasion that I shall converse with them forever; and I take comfort in those that are dead or absent, believing that I shall shortly meet them in heaven, and love them with a heavenly love."

OUR RELATIONS WITH ENGLAND.

At this time, there are peculiar reasons why America and England should not quarrel. They stand in the van of modern progress. In America the great obstacle and reproach to freedom is removed after a fierce struggle, and the nation is once more looked to as the day-star by all in forcing lands who are interested in liberty or the advancement of human rights. In England the ceaseless but silent revolution still proceeds which has made her all she is. Every day the poor are elevated, their condition ameliorated, their privileges extended; the distinctions of class are less apparent; the nation becomes more really democratic. The governing classes, even those who cling most tenaciously to the institutions of the past, have yet the wisdom to know when to be no longer conservative. The political events of the last year are full of significance. The franchise has just been extended; a workingman now sits in the House of Common; the connection between Church and State has been dissolved in one important portion of the empire; the abolition of primogeniture was proposed at the last session of Parliament; the whole question of land tenure must soon be thrown open for discussion. Changes may not be rapid, but reforms are not slow. The Liberal party is in power; the very men who were our friends control the government. In the present Cabinet the Duke of Argyle, Earl Granville, Earl Cimberly, John Bright, William E. Forster were staunch advocates of the Union during the war; and other subordinate members of the government were equally earnest and outspoken in our behalf; while those who opposed us have admitted their mistake. The Prime Minister, the most powerful man in England for at least a quarter of a century, has been proud enough and great enough to acknowledge his error.

It is then a positive duty for us to uphold the hands of those who are struggling for reform in England. One who knows writes that, besides the Irish land bill, there will be brought forward at the next session of Parliament "a general education bill, great measures of law reform and of army reform, a trades-union bill, and an abolition of tests bill, backed by the whole power of the government." Whether he approves it or not, every sensible Englishman can see the irresistible current that sweeps away every obstacle there. What a fearful responsibility to interrupt this onward movement of a nation by such an event as a war between England and America!

No. This is not the time to select for serious difficulties between us. With two liberal parties in power, with every prospect of the continuance of each, with the people in one country becoming more prosperous, and in the other more powerful, every day—the friends of the whole race, in either land, should do all in their power to foster the most friendly feelings. The two nations should strike hands, and with their liberal ideas, their advancing Christianity, their increasing education, their material wealth, they can not only present a front that no physical power will attack, but which no great moral evil that they may wish to remove can long withstand.

They need only to look each other steadily in the face, and learn how much good feeling each cherishes for the other. Neither government can possibly have a desire to quarrel. Each will gladly follow the current of popular feeling if this sets toward such a reparation as England can honorably offer and America honorably accept. When once this difficulty that now separates them shall be removed the nations that speak the English tongue will constitute an empire, divided by seas and separate in institutions, indeed, but as powerful, and vastly more beneficial to the world, than that of Rome. Their unity in laws, language, literature, and religion will be paralleled by their harmony in feeling, their accord in progress, their generous rivalry in liberty, and in all the works that bring peace on earth and good-will to men.—Col. Adam Badeau, in *Harper's Magazine for March.*

ABOUT DOGS.

MINERVA GLEN, April, 1870.

EDITOR CALIFORNIA FARMER:

Dear Sir—While reading that excellent article about dogs, in the FARMER, a few weeks ago, a chapter of my experience in the canine business occurred to me. I intended, at the time, to give it to your readers, hoping it might be a useful hint to some of them, but no opportunity presented itself until now, so here it is:

About eighteen months ago, an acquaintance of mine, who was somewhat of a dog-fancier, and had just become the owner of a litter of fine Newfoundland pups,—recommended to me the wonderful usefulness of good dogs, and finally prevailed on me to buy one of his for the moderate sum of $5. I had read a great many stories about the lives of children having been saved, and other great losses averted by the timely interference of some "good dog," and thought of my little girl at home, and the probability of, some of these days, being able to get up a first-class "dog story" myself. Well, I *have* got the story, though the dog figures rather badly in it.

Well, I took him home, and a likely "purp" he was. He "waxed exceedingly strong" and grew amazingly fast; indeed, so rapidly did he gain, and so much was I obliged to increase his "grub" each day, that, after six months, I came to the conclusion that either he or I would have to leave the "Glen" if things went on at that rate much longer.

As I could see no other use in him thus far, except to stow away food and keep it from spoiling, I thought I could use him to better advantage as *manure*, and while I was looking up a good place to *plant* him, a neighbor called in and "rather liked" the dog, so I gladly made him a present of it. Now sir, in place of the "purp," I bought two fine Berkshire hogs; and it is a fact that, next fall, we will have 500 pounds of good pork from the same food it would have required to have kept a worthless dog; besides our flower-beds are not trod down every morning, as if a mule had walked over them; we hear no dismal howls, —horrible yawns—and we have no fleas now.

Our neighbor keeps the dog yet, but he has no hogs. Nevertheless, the last time I saw him (the dog) there was not much else of him but a first-rate frame to build a dog on

Summing up, I *do* think that about the poorest property a farmer can have is dog-property. I know some people who support half a dozen worthless curs, and keep neither sheep nor hogs. The dogs will not allow the former to live on the premises, while the latter would starve where so many "purps" have to be fed. Why do people keep dogs? Yours, A. K.

IMPROVED BREED OF CATTLE.

We noticed on Tuesday last about thirty young bulls passing through town. They were from San Francisco, and were purchased by Messrs. Standifer & Dunlap, for the improvement of their stock on the Yucaipa Ranche, belonging to these gentlemen. They are mostly yearlings, and, as they passed through town, attracted the admiration of all who witnessed them. We are glad to notice and commend the enterprise of our farmers and stock-raisers, and no doubt the enterprising owners of this band of cattle will have cause to "bless their lucky stars" in obtaining a means whereby they can cross their stock with animals so pure and thorough-bred.

[Thus speaks the *San Bernardino Guardian* of April 9th, and the subject is worthy of note and comment; for it is all-important that every effort should be made to improve the breeds of cattle; also horses, sheep, swine, and every other class of our useful animals.

But when will the time come when a higher view will be taken of humanity, and a just care be given to the subject of creating a purer and nobler type of mankind? when will the time come when attention—a just and proper attention—will be given to the importance of creating a race of human beings that shall show among mankind as great an improvement in purity of blood and beauty of person, grace of action, stateliness, and intelligence, and other high qualities,—as the improvements that have been made in the various races of animals in the last ten years? when shall we *reject* raising human beings from scrub stock, —the same as has been done with other animals? —ED. F.]

Make Home Beautiful.

Something for every Home, that will win a place in every Heart.

"MORNING PRAYER."

A beautiful Chromo by Louis Kurtz, exactly reproducing the original painting by John Phillips. Press and People unite in pronouncing it the most desirable picture for Home adornment ever published.

"It is exceedingly beautiful."—Chicago Tribune. "Of the most lovable description."—Evening Journal. "Every way a desirable work."—Republican. "Combines artistic skill with rare truthfulness to nature."—Post. "Cannot but be immensely popular."—Art Journal "A beautiful picture that teaches a beautiful lesson."—Little Corporal.

Young Man Wanted.

We want a smart and active young man from 12 to 16 years of age, to attend to our Reading Room and Museum, Mailing Papers, etc.

None need apply who cannot bring the best testimonials of character and ability. Must be a good penman and quick at figures.

To such a young man an opportunity of advancement will be given.

A young man whose parents or friends reside in the city would be preferred.

Apply at our office only between 4 and 6 P. M.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to EDITOR FARMER.

Miscellany.

"WHAT'S IN A BOTTLE?"

[From the French of ANTONY REAL.]

KINGS, PRINCES, LORDS

I.

Vinicultural France consists of three kingdoms ruled despotically by three good kings, whose hereditary virtues have been the delight of men in all ages. Fortunate, happy kings, whom revolutions have never dethroned, and whose ever-loyal subjects have never ceased to pour forth the tribute of love and admiration.

The first of these sovereigns is king Bordeaux, whose dominions extend from the banks of the Garonne to the Pyrenees. A numerous court, composed of illustrious lords—Chateau Lafitte, Chateau-Margeaux, Chateau-Latour, Chateau-d'Yquem, surround him with splendor, and he marches proudly, escorted by his troops of devoted burgesses and peasants.

This monarch is pacific and generous.

II.

The second is named king Cotes du Rhone.—His power stretches along to the banks of the river whose name he bears, from Lyons to the county of Venaissin. This king is illustrious among men. Less peaceful than his brother Bordeaux, he is equally generous; he is accused of mounting easily to the head, and of sometimes distributing his estates with the animation of his spirit. His prime-minister is count Hermitage, and the most distinguished personage is the baron Cote Rotie; the magnates are the lords of Croze, of Chateau-Grillo, of Comes, of St. Peray, of Chateau-neuf-du Pape.

III.

The third of these high majesties is king Burgundy, the most high-minded and spirituous of them all. The capital of his states is found at Cote-d'Or, a name of good order, which one would have thought was devised expressly to be bestowed upon this favored land.

This illustrious ruler, whose magnificence shines over all the earth, is surrounded by a most brilliant court. It is very near him that we find the old families whose ancestors have founded Clos-Vougeot, Richebourg, Romanee, Conti, Pomard, Volnay, Montrachet, Corton, and Chambertin.

This king has for suzerains the proud lords of Beaujolais, Thorins, Fleurie, Morgon, and Moulin-a-vent, who receive fealty and homage at the hands of the numerous vassals of the Maconnais. All these happy subjects of the great Burgundy, Beaujolais and Maconnais, share the renown of their sovereign, and can, like him, figure with honor on the tables of the daintiest. The Maconnais have a title to fame which will immortalize them forever; they have inspired the bard of the "Meditations," for in their midst was born a great genius of our age—Alphonse de Lamartine.

IV.

But let us retire for one instant from the presence of these kings and princes of the wine family. There is a sovereign who, in his good time, must eclipse them all; at the time when Bordeaux, Cotes-du Rhone, and Burgundy—exhausted by the voluptuous trance they have thrown around our spirits, by the joys they have shed upon our souls—withdrawing from the scene of their exploits, and laying down their sceptre of glass, descend from the throne to which they have been elevated by the god of wine, to give place to that other majesty, who then enters radiant, his forehead encircled with a crown of silver.

This sovereign, who has spirit, valor, generosity, magnificence before all others—who has inspired poets more than any other, and whom Philip Augustus, the patron of letters, would have crowned if he had existed at his age, this sovereign, anointed at Rheims, where he was born, in 1397, is called the Emperor CHAMPAGNE

A few days ago a man entered an insurance office in Buffalo, and, tossing a paper on the counter, said to the clerk, "That's run out, and I want to get it renewed." As the clerk unfolded the document a broad grin spread over his face, and he inquired, "Are you sure that this has run out?" "Yes," said the man, "my wife told me it run out yesterday morning," whereupon the clerk handed back to him—his marriage certificate!

Despatches from Hong Kong, by way of London, state that Captain Eyre has been suspended, not on account of the collision with the *Oneida*, but for neglecting to ascertain the extent of the injury done, and for taking no measures to save the drowning crew. The *Pall Mall Gazette* regards the punishment as inadequate.

FORTY-TWO TON HAMMER.

In England, a huge steam-hammer, weighing 1 600 tons, is being made for the Russian Government. The hammer-head weighs 42 tons, the anvil-block 500 tons, and it is to be used for forging steel guns.

The best material for coating tools and steel instruments, to keep them from rusting, is a preparation composed of three parts of lard and one part of rosin, melted together.

PLANT THE EARLY ROSE.

We desire to make contracts with parties who wish to cultivate the famous Early Rose Potato. Believing it to be the *best* Potato grown, we desire to contract for the growing of it in large quantities.

Those who have good land can have the Seed Potato of us, and raise by contract.

HUCKS & LAMBERTS'
CELEBRATED PATENT
H.&L.
AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gomb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the package.

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor FARMER.]

GRAIN AND FLOUR MARKET.

San Francisco, April 21.

The Grain Market has improved both abroad and at Home. Liverpool quotations remain 9 s., and with the prospect of abundance everywhere. There is but little hope of high rates the present year as the late rains have given full confidence of an immense harvest over our whole State, and we have an evidence of this in the Grain that is now coming in from many sections, which otherwise would have been kept back.

Retail Prices in the Fruit Market.

The Fruit Market may be said to be at its lowest ebb in variety; there will, however, soon be seen a revival by abundance of strawberries and other small fruits.—We note here that strawberries from our market have been shipped to Chicago, and soon other fruits will go. We also note here that arrangements have been made to send large amounts of Fruit to the East this season, and with better experience in packing and shipping, and with better results, our Fruit Market will now steadily improve.

DAIRY—BUTTER, CHEESE, EGGS ETC.

(M. B. French & Co.)

Our Dairy Market is abundantly supplied; the rich grass feed gives luscious fresh butter, and at low rates; and our poultry fatten, and hens lay freely by reason of good feed. The markets are low for all produce, but ready sale for all. More persons are going into the business, therefore less rates for their productions.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser forsixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

PREMIUMS.

THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscribar* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four poundsof the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870 This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will use this seed they shall have the parcel mailed to them free.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders shou d inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December

Collections can be forwarded by post at the following rates:

EUROPEAN.

From our Special Correspondent.

Paris, March 26th, 1870.

MEATS FOR PARIS MARKET.

From 5 to 6 millions of calves are annually produced in France, half a million succumb to disease and accident—about 3 millions are slaughtered, and the remainder keep up stock. The 5th of the meat supply of Paris is Veal—and on the Continent it is in great request. But this Veal is specially fatted for "Staggering Bobs," are prohibited to be sold. England prefers to raise her calves, converting by means of beef, food for man, out of substances he cannot consume.—Here it is different. At the commencement of the present century Veal was half a franc per pound, it sells now at the rate of, 1.50 frs. To find a supplement for milk, in the fatting of calves, has been a desire for a long time. In the north of France, the mean annual production of milk per cow, is estimated at 240 gallons, in the centre and South, but 80. Among the substitutes tried, Arrowroot tea—bread—roasted wheat—rice gruel—oil cake, etc., but the digestion of these proved difficult and uncertain.

HOW CALVES ARE RAISED

M. Brelz—Penat, an old Miller, residing near Semeure, by his peculiar system of grinding Maize, he has succeeded in giving calves, intended for the butcher, at the end of the first month, half a pound of Maize meal, with its milk, daily—double the quantity at the end of the second, and increasing in the same proportion. The meal is diluted first in cold water, the mixture poured into boiling water, and slowly cooked, without coming to a boil, for three quarters of an hour, stirring all the time. One pound of meal, to six quarts of water, with a dash of salt—unskimmed milk to be added to this mixture while warm.—While the animal drinks this preparation, the mixture should be kept stirred by the hand, and in case the calf dislikes it, stop it for a few days. The Government to test the matter, experimented on thirty calves, on one of the imperial farms, and the result proved highly satisfactory. One example will serve. A calf—Norman breed—was submitted to experiment, eight days after birth. It weighed 108 lbs., after 68 days, during which it was weighed five times, it gained 176 lbs, on an average dietary, of 7 quarts of milk and ¾lb of meal daily. The last pound of flesh produced, was the most costly, and slowest showing that the rations ought to be richer, while the butcher who slaughtered the animal corroborated, by observing, the animal ought to have been fed fifteen days longer on increased feeds of meal. The calf sold for 180 frs.,—its original value was 40 frs.,—and the cost of meal, 14 frs.,—leaving 108 frs., to pay for 600 quarts of milk consumed. Without the meal, 1600 quarts of milk would have been required to fat the animal. The results in all the calves showed that the larger breeds are best suited for fattening purposes—that not more than 50 per cent of the plastic matters in the food are assimilated, but that the flesh was fine, close and tender, and the fat on being cooked, had the usual white silver appearance. In France, where holdings are so small, to be able to economise the milk, and allow two calves to be fatted, where only one was before, is a progress.

SUPPLY OF MANURE.

The not very remote exhaustion of the guano beds, and the very high price of this manure when it reaches France, has set all minds thinking how to meet the difficulties present and to come.—Among these is the proposition to use the heads and vertebræ of the 25 millions of Codfish annually caught on the shores of Norway, to say nothing of Whales, Seals, etc. Heads and back-bones sell for 1.40 fr per 220 lbs, and yield a third of their weight of dry matter, suited for manure.—A whale minus blubber can be had for 25 fr and weighs from four to five tons—they are killed by cannon balls fired from small Steamers. The flesh yields 13 per cent of organic, and 7 of inorganic matter—the former containing 10 per cent of Nitrogen. Some persons suggest the west coast of Africa, for catching fish, which exist there in shoals, but unfit for food; others would prepare the weed (*fucus natans*) that forms such vast seas between the Canaries and Azores, and several suggest the pounding up of the madrepores of the Red Sea. All this show the uneasiness felt for a supply of artificial manures.

At Courrieres, in the North of France, there is a factory which distils immense quantities of Maize, imported from the Danube. The grain is cracked, and boiled in acidulated water, to convert the amydon into sugar, chalk is added to neutralize the acid, and the "mort" ferments, and becomes passed to the still. The "wash is run into cisterns, allowed to settle, after the water has been drawn away, the residue is dried. This pulverulent matter yields on analysis, 4.30 of azote, and 2 per cent of phosphate of lime, besides salts of potash, and which has proved an excellent manure for beet.

AGRICULTURAL SHOWS, MODEL FARMS ETC

In connection with the late Agricultural Show in the Champs Elysees, a suggestion has been made—and well received—by the exhibitors of implements, viz., that after the Judges have made their awards on the classified implements,—all the manufacturers will be allowed to collect their various exhibits into lots, and so be in a connected position to explain to the public. A French house exhibited a movable "Smithy" and "Carpenters Shop," completely fitted up—but with English tools. It was much admired, and several "orders" were taken.

At several of the Imperial Model Farms—managed by the Emperor's private agents—annual sales of Stock take place. All the animals have their pedigree clearly defined in the French herd book. At the recent sale at Carbon, some bulls fetched over 2000 fr., and cows and heifers, similar prices. The purest blood is imported, and the suggestions made by those present, as to the crossings and selections, are practically listened to. The animals are eagerly bought up and transported to various parts of the empire—one of the positive objects of these breeding "depots." Many local Societies club the price of a bull, and so secure good blood in the serving of their cows. A curious zoolectinic fact has been noticed in the case of pigs. The sows raised from English stock, cannot be surpassed by importation, while the boars seem to fall away. In the sales above alluded to, the exact age and weight of each animal was set forth.

At the end of April will take place at Valence, an exhibition of farriery. It will be devided into two classes—civil and military. Farriers' can exhibit the evidences of their handiwork for saddle and carriage horses, animals of draught and labor, including farm horses, mules, asses, and bullocks. The preparations are going forward for the Paris Horse Show.

AGRICULTURAL AND SCIENTIFIC PRIZES.

The Society of Agriculturists has offered a prize of 3000 fr, for the most efficacious remedy for the destruction of the grub, or white worm. Up to the present, the "perfect cures" reported, are as numerous as the sands on the sea—shore—but except their professors, no one has shared in the advantages.

Nice is to have an "Agronomical Station"—so that the colony of illustrious strangers who pass the season there, will, for the future be able to witness, how science and patience go hand in hand in French Agriculture.

The persistent severe weather has thrown all kinds of out door work back, and day after day, every one is expecting to see "Spring coming."—For days the sky remains dark and sullen—other times the sun strikes out cheerfully in the morning, to gratify us for a few minutes, and retires for the remainder of the day, in favor of cold penetrating rain, snow or hail. Winter crops are holding their own, but stock will be pinched everywhere for fodder in early May.

I dont know if the dog show which was to open on the 22d, but didn't, falls within my boundary. However, the public was permitted to get a peep to day, and all the dogs are in the wrong boxes.—Great and little, pacific and ferocious, are huddled together. A monster combat between rats and terriers is announced as the closing scenes.

Eastern Correspondence.

New York, April 17, 1870.

ART GALLERIES.

Editor California Farmer:

The lovers of Art in New York can have a feast at the present time. At Goupil's, on Fifth Avenue, is to be seen Church's new picture of Jamaica. I have seen it now five or six times, and on each occasion I discover new beauties. It represents a scene in the interior of the island called "St. Thomas in the Vale." The atmospheric effects are marvellously painted. The spectator, if he is at all familiar with tropical scenery, at once recognizes the truthfulness of the artist, and wonders at the cunning of the hand that can put upon canvass the enchanting characteristics of a tropical day in the month of May. The brilliant sky in one moment, dazzling with the glory of sunshine, at another dark with heavy thunder clouds or half sunshine and clouds is faithfully reproduced; and one can almost fancy himself in the presence of Nature, looking out of a window upon an actual landscape. The foliage is beautifully painted, and one can recognize the mahogany, lignumvitæ and ceiba trees. At the Leeds gallery, on Broadway, is exhibited the collection of pictures belonging to Mr. J. P. Beaumont, who is considered among the most distinguished judges of Art in this country. It far exceeds in point of merit any gallery ever offered for sale in New York, and the competition for the choice pictures will probably be very great. Next week the private collection of Mr. Belmont is to be opened to the public for the benefit of the Sheltering Arms, a most worthy object.

FAMOUS PRIMA DONNAS.

The other evening I went to hear Carlotti Patti, and came away wild with enthusiasm. She has a wonderful voice and manages it like a fairy. I cannot imagine how she executes such marvels, nothing is too difficult for her, scales and passages of incomprehensible intricacy she laughs at, she trills like a bird and has the power of prolonging her notes until you wonder if she is really a human being, all this she does, too, without an apparent effort, her chest hardly moves and her face is as smiling as if she enjoyed the amazement of her audience. It would be unfair to say her voice is like the tone of the violin, for it is immeasurably superior and yet it *is* like it, in its depth, its passion, its delicacy. I have heard Jenny Lind, and Sontag, Alboni and Parepa, but Patti surpasses them all, and if her sister Adelina is even more wonderful than Carlotti, I do not wonder that she is called divine.

ANNA DICKINSON.

I went to hear Anna Dickinson the next evening. She is in her line equally as distinguished as Patti. She was suffering from a cold but made a profound impression upon me. She had an immense audience and in point of culture a most flattering one.

COLORED PEOPLE, POLITICIAN, M'FARLAND, ETC.

The procession of the colored people attracted much attention. The cowardly element of the sham Democracy showed its teeth but did not dare to bite. The leaders of the procession were urged to ask Mayor Hall to lead them, but they had the good sense and dignity to refuse to place themselves in a false position.

The kilkenny fight between the two wings of the Democracy still continues, but the "old ones" have the best of it. The new charter for this city is much talked of, but it is yet too early to judge of it. The conduct of the Republicans is severely criticised. Of course the trial of McFarland, for the murder of Richardson, is a principal topic of conversation. So far it is completely one sided, and public opinion is divided as to the manner in which the case is conducted. From the first it was evident that McFarland would be cleared, and it seems now that the counsel for the prisoner are more anxious to hurt the *Tribune* man than to prove the insanity of their client.

We have been enjoying delicious weather. During Passover week it is generally very gloomy and cold, but I have never seen, even in California, more brilliant days than Tuesday, Wednesday and Thursday, in consequence, the trees are budding and the grass is of a vivid green that charms the eye. Easter Sunday, however, has been wet and cold enough to make up for the sunshine of the week. I have never seen so great a profusion of costly flowers as decorates the altars of the principal churches to day. The most extravagant exhibition was at St. Stephens Catholic Church, but at Grace, Trinity and Zion churches, the display was almost equally fine. I must not forget the church of the Messiah, for here the taste manifested in their arrangement was something of which the ladies ought to feel proud. The music in all the churches was prepared with great care, but St. Stephens Church, as usual, excelled them all. The orchestra and chorus were unusually large and well trained and Morgan, king of organists, was the presiding genius. Brooklyn, however, has now the greatest church music. The choir of the Episcopal Church of the Holy Trinity is the finest by all odds in the country.

We all take a great interest in the Robinson case. The charge of Judge Sawyer was simple and laughable. It does not seem possible that Robinson can be punished for performing his duty.

M. A. S.

HINTS TO YOUNG MEN.

BY JOHN WARE, M. D., BOSTON.

Unhappily for the young, this just and elevated view of the relation of man to woman is forestalled by impressions of a totally different sort, early made and deeply rooted. Among the first lessons which boys learn of their fellows are impurities of language; and these are soon followed by impurities of thought. Foul words are in use among them before they can actually comprehend their origin, or attach to them any definite meaning.

Most men who, when young, have been in the habit of unreserved communication with others of their own sex, will recognize the truth of this statement. Happy is he who can look back upon no such recollections; happy is he, the surface of whose mind does not bear upon it through life stains which were impressed thereon by the corrupt associations and the corrupt habits of youth; happy indeed is he if the evil has not eaten into the soul itself, and left behind it such marks of its corrosion as neither time nor even repentance can ever obliterate. When this is the training of boyhood, it is not strange that the predominating ideas among young men, in relation to the other sex, are too often those of impurity and sensuality. Nor is this evil confined to large cities, though it there manifests itself more distinctly in open and undisguised licentiousness, and in the illicit commerce of the sexes. It equally exists in the most secluded village in the corruption of the thoughts and language, and in modes of indulgence, which, if less obvious and remarked, are not, therefore, the less dangerous to moral purity.

We cannot be surprised, then, that the history of most young men is, that they yield to temptation in a greater or less degree, and in different ways. With many, no doubt, the indulgence is transient, accidental, and does not become habitual. It does not get to be regarded as venial. It is never yielded to without remorse. The wish and the purpose is to resist, but the animal nature bears down the moral. Still transgression is always followed by grief and repentance. With too many, however, it is to be feared, it is not so. The mind has become debauched by the dwelling of the imagination on licentious images, and by indulgence in licentious conversation. There is no wish to resist. They are not overtaken by temptation, for they seek it. With them the transgression becomes habitual, and the stain on the character is deep and lasting. The prevailing sentiment of the mind, the prevailing tendency of the will, is to sensual vices; and there are no vices which so deeply contaminate the soul of man, so degrade, so brutalize it, as these. The degree of debasement has in some men, even in the communities, reached so low as to suggest modes of indulging this Appetite from which the common sensualist shrinks with horror, and which cannot be even named without loathing.

The most perfect safeguard against sensuality in the young, is, doubtless, to be found in the cultivation of such a purity of spirit as will lead them to revolt at all indulgences which are not within the limits prescribed by the laws of God, and which are not sanctified by a higher sentiment than that of mere animal passion. But situated as we are in youth,—exposed to the early pollution of our thoughts; tempted whose resistance is the most difficult, and control the most rare,—it is seldom that the evil can thus be forestalled by good impressions. The task is too often rather to remove evil than to anticipate it. The physical tendencies are excited and perverted, before moral discipline is begun,—nay, even before the individual is capable of it. Our work, then, is one of reformation; and to effect this we must look for many other motives beside those of the highest and purest character. Among these subsidiary motives, none have so lively an influence as those which are derived from what experience teaches of the deplorable results of early sensual excess upon our physical condition and development.

All testimony is united upon this one point—of the imminent danger to the health, of early sexual indulgence. Neither is it alone the immediate production of disease which is to be feared; the constitution may be ultimately and irreparably injured without this. The perfect development of our bodies, their form and thorough organization, are prevented by it. Nothing tends more certainly to wither the energies of youth and blast the hopes of manhood. It is not merely that the mind is polluted; the body is enervated. A thousand forms of disease may hang round the victim; imbitter his existence, or destroy his hopes in life, which he never imagines to have had such an origin. But even further than this; Providence seems to have stamped this vice with more than its ordinary token of displeasure, by rendering its votaries liable to that terrible disease from which so few of them ultimately escape. The effects of this disease, as is well known, are not always to be eradicated. They are not confined to present suffering. They may set a mark as indelible as that of Cain. They may cling to him through life, may destroy his health, undermine his constitution, hasten his death—may even terminate in disfigurement and mutilation. Nay, they may even so taint his blood as to descend to his very offspring, and inflict upon another generation the fearful consequences of his transgression.

[We most earnestly commend the careful reading of the above essay of Dr. Ware, of Boston, one of the most eminent physician that ever honored that profession, to all young men and after the perusal of the essay we ask them to visit the "Anatomical Museum," in this city, and see the sure results of the violation of Nature's laws here fully illustrated.—Ed. F.]

ADVERTISING PAYS.

Many business men, or men in trade, often say advertising "don't pay." We copy a few brief words from some of the largest advertisers in the United States. These words are a refutation to those who say "advertising don't pay"—

"Without advertising I should be a poor man to-day."—[H. T. Helmbold.

"My success is owing to my liberality in advertising."—[Bonner.

"Advertising has furnished me with competence."—Amos Lawrence.

"I advertised my productions and made money."—[Nicholas Longworth.

"Constant and persistent advertising is a sure prelude to wealth."—Stephen Girard.

"He who invest one dollar in business should invest one dollar in advertising"—[A. T. Stewart.

"P. T. Barnum, the noted exhibitor, ascribes his success in accumulating a million of dollars in ten years to the unlimited use of printer's ink."

"A man who is liberal in advertising is liberal in trade, and such a man succeeds, while his neighbor, with just as good goods, fails and drops out of market."—Horace Greeley.

FURNITURE WAREHOUSE OF GEORGE O. WHITNEY, & CO.

NEW-COMERS TO CALIFORNIA.

The new-comers to California, who come to settle with us permanently, should by all means visit this furniture warehouse; as here they can be completely furnished, and with the very best. New-comers should see the new and splendid furniture now finishing up for the Grand Hotel,—which surpasses in richness any ever shown here.

The upholstery department is complete in every part; curtain stuff, curtain fringes, tassels, ornaments, etc., all of superb quality. This house furnishes chamber sets, etarges, window-cornices, and other material as rich as was ever made.

Messrs. Whitney & Co. are also finishing up the reception-chairs for the City of Paris Dry Goods Store, which will soon be removed from Kearny to Montgomery Street—with many other rich collections, really worth a visit even to look at.—Over fifty workmen are now constantly employed to complete orders.

An evidence of prosperous times and lively business can be seen at the warehouse, in the numerous loads of furniture going to every section of our state—to the different parts of the coast—to Alaska, Mexico, the Islands, etc.

We are glad to note this, as it shows returning prosperity to our State.

NOTABLE EGGS

We received a box of eggs last week from the Mission which we esteem so singular we note them as a curious production.

The first dozen were large and very fine, of more than usual size, and heavy. There were also six other eggs, the production of young chickens of about the same age—"one year's chickens," as they are called,—and five of them measured as follows: No. 1, large, 3 in. long and 6 in. round; No. 2, 1¾ in. long and 3½ in. round; No. 3, 1¾ in. long and 3¾ in. round; No. 4, 1¾ in. long and 3 in. round; No. 5, 1 in. long and 2¾ round.

The *long* measurement was the length on the flat table, not measuring the oval surface. It was remarkable to see from the same group of chickens, a large, full-sized egg, and others down smaller than a pigeon's egg, one of which came with the parcel as a contrast. These eggs were kindly sent us from the garden and residence of Chas. Bibend, Esq., to whom we return thanks for the gift.

AUCTION BUSINESS.

We call attention to the card of Messrs. Sumner & Co., of Vallejo. They will promptly attend to the wants of the citizens of Solano County, in the auction business.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER FIFTEEN.

PLOWING—GOOD AND BAD.

There are so many wrong ways to do a thing to but one right one that there is no reason in the impatience too often evinced with those who contrive to swallow the truth wrong end foremost, and thereupon insist that it won't do. For instance: A farmer hears something said of deep plowing, and, without any clear understanding of or firm faith in it, resolves to give it a trial. So he buys a great plow, makes up a strong team, and proceeds to turn up a field hitherto plowed but six inches to a depth of a foot: in other words, to bury its soil under six inches of cold, sterile clay, sand, or gravel. On this, he plants or sows grain, and is lucky indeed if he realizes half a crop. Hereupon, he reports to his neighbors that Deep Plowing is a humbug, as he suspected all along; but now he knows, for he has tried it.—There are several other wrong ways, which I will hurry over, in order to set forth that which I regard as the right one.

Here is a middling farmer of the old school, who walks carefully in the footsteps of his respected grandfather, but with inferior success, because sixty annual harvests, though not particularly luxuriant, have partially exhausted the productive capacity of the acres he inherited. He now garners fifteen to thirty bushels of Corn, from ten to twenty of Wheat, from fifteen to twenty of Rye, from twenty to thirty of Oats, and from a ton to a ton and a half of Hay, as the season proves more or less propitious, and just contrives to draw from his sixty to one hundred acres a decent subsistence for his family; plowing, as his father and grandfather did, to a depth of five to seven inches: What can Deep Plowing do for him?

I answer—By itself, nothing whatever. If in every other respect he is to persist in doing just as his father and grandfather did, I doubt the expediency of doubling the depth of his furrows.—True, the worst effects of the change would be realized at the outset, and I feel confident that his six inches of subsoil, having been made to change places with that which formerly rested upon it, must gradually be wrought upon by air, and rain, and frost, until converted into a tolerably productive soil, through which the roots of most plants would easily and speedily make their way down to the richer stratum which, originally surface, has been transposed into subsoil. But this exchange of positions between the original surface and subsoil is not what I mean by Deep Plowing, nor anything like it. What I do mean is this:

Having thoroughly underdrained a field, so that water will not stand upon any part of its surface, no matter how much may there be deposited, the next step in order is to increase the depth of the soil. To this end, procure a regular sub-soil plow of the most approved pattern, attach to it a strong team, and let it follow the breaking-plow in its furrow, lifting and pulverizing the sub soil to a depth of not less than six inches, but leaving it in position exactly where it was. The surface-plow turns the next furrow upon this loosened sub-soil, and so on till the whole field is thus pulverized to a depth of not less than twelve inches, or, better still, fifteen. Now, please remember that you have twice as much soil per acre to fertilize as there was before; hence, that it consequently requires twice as much manure, and you will have laid a good foundation for increased crops. I do not say that all the additional outlay will be returned to you in the increase of your next crop, for I do not believe anything of the sort: but I do believe that this crop will be considerable larger for this generous treatment, especially if the season prove remarkably dry or uncommonly wet: and that you will have insured better crops in the years to come, including heavier grass, after that field shall once more be laid down; and that, in case of the planting of that field to fruit or other trees, they will grow faster, resist disease better, and thrive longer, than if the soil were still plowed as of old. (I shall insist hereafter on the advantage and importance of subsoiling orchards.)

Take another aspect—that of subsoiling hillsides to prevent their abrasion by water:

I have two bits of warm, gravelly hill-side, which bountifully yield Corn, Wheat and Oats, but which are addicted to washing. I presume one of these bits, at the south-east corner of my farm, has been plowed and planted not less than one hundred times, and that at least half the fertilizers applied to it have been washed into the brook, and hence into the Hudson. To say that $1,000 have thus been squandered on that patch of ground, would be to keep far within the truth. And, along with the fertilizers, a large portion of the finer and better elements of the original soil have thus been swept into the brook, and so lavished upon the waters of our bay. But, since I had those lots thoroughly subsoiled, all the water that falls upon them when in tillage sinks into the soil, and remains there until drained away by filtration or evaporation; and I never saw a particle of soil washed from either, save once, when a thaw of one or two inches on the surface, leaving the ground solidly frozen beneath, being quickly followed by a pouring rain, washed away a few bushels of the loosened and sodden surface, proving that the law by virtue of which these fields were formerly denuded while in cultivation is still active, and that Deep Plowing is an effective and all but unfailing antidote for the evils it tends to incite.

We plow too many acres annually, and do not plow them so thoroughly as we ought. In the good time coming, when Steam shall have been so harnessed to a gang of six to twelve plows that, with one man guiding and firing, it will move as fast as a man ought to walk, steaming on and thoroughly pulverising from twelve to twenty-five acres per day, I believe we shall plow at least two feet deep, and plow not less than twice before putting in any crop whatever. Then we may lay down a field in the confident trust that it will yield from two and a half to three tons of good hay per annum for the next ten or twelve years; while, by the help of irrigation and occasional top-dressing, it may be made to average at least three tons for a lifetime, if not for ever.

JUTE.

The stems of bark of many plants possess fibres of considerable strength and fineness. Flax has very fine and long fibres; those of hemp are coarse. In the ramie plant, lately so much talked about, (the cultivation of which has been attempted in our Southern States,) these fibres possess a remarkable degree of fineness and strength; in the malva they exist, but are less strong, and in Jute they are very coarse, but very strong. As the last plant is little known, we will give a few details concerning it.

The Jute-plant, *corchorus olitorius*, is related to the linden-tree, but belongs to another family, the Tiliaceæ, very different from the linden in the climate required for its growth. Its home is the tropics, especially Southern Asia, where it has been cultivated for many centuries. It grows, like flax and hemp, in only one year, but reaches a height of fourteen feet. Some varieties of the plant are grown for vegetable food. To free the fibre from the plant, it must go through the same rotting process as flax; but a much shorter time is sufficient. For this purpose the stalks are stripped of their leaves and placed in loose bunches in running water. The high tropical temperature causes the decomposition to go on so rapidly that in a few days the outer covering leaves the stalk. The separation of the fibres is then performed in a very primitive manner. The workman steps into the stream, loosens from every stalk a strip of the skin or bark, and, with great dexterity, separates the fibres, removes the adherent slimy substance by rapid motion alternately through the water and through the air, and throws the cleansed fibres on the shore, where they dry quickly and are ready for the market.—Notwithstanding the rude simplicity of this treatment, the fibres of Jute in commerce are always much cleaner than those of hemp; which, with all the mechanical treatment it has undergone, contains many splinters of bark, woody substance, etc., visible even to the naked eye. Besides, the fibres of Jute are much longer than those of hemp. A length of ten feet is not rare, and sometimes they are twelve to fourteen feet long—as long as the whole plant. The Jute is, even in its external appearance, very different from all other fibrous products. It is distinguished by the fineness of the fibres from Manila, Sisal, and Pite Hemp, (fibre of the *crotolaria juncea*,) already found in the London market. It resembles flax and hemp most nearly; but differs from both in its more silky lustre. However, for an unpracticed eye, it is often difficult to determine between Jute, Flax, and Hemp, and a distinguishing reliable test is therefore desirable. The following is such a test: acid sulphate of aniline colors Jute intensely gold-yellow, and hemp pale yellow, while it has little or no effect on flax. The cause of this is that aniline colors woody fibres best; and that, of these three materials, Jute is the most woody and flax the least so.

But the Jute itself is much adulterated with fibrous material taken from other plants, generally inferior, though sometimes equal to Jute.—Yellowish varieties are the most common, but we often see rather dark brown ones. This is only the case after long exposure to the atmosphere.—The Java bags, used for coffee and other substances, are made of an adulterated Jute, and are always brown. In this respect this kind of Jute is similar to wood which also becomes brown by long exposure to the atmosphere. Microscopic investigation (which, by the way, is the most reliable test to distinguish the origin of different textures) shows that the East-Indian Jute is often mixed or adulterated with fibres from various other plants, especially two kinds of East-Indian *malvas*, as durable as the Jute itself. These also become intensely yellow when treated with the sulphate of aniline; but they are turned brown or dark by the atmosphere. It is well to know how to distinguish the true Jute from these adulterations.

The Jute fibres, when taken with a small forceps from the raw material and examined under the microscope, are found to consist not, like cotton, of single, very much elongated cells, but like raw flax and hemp, of bundles of cells.

In examining the cells lengthwise, it is easily seen that the inner cell-walls are not parallel to the outer, and that, consequently, the opening becomes in some places very narrow, a peculiarity not possessed by any other fibre adapted for spinning.

In India, the Jute is used for strings, ropes, and woven fabrics. The finer kinds are there called *meglla*; the coarser, used only for bags, are called *chote*, by a corruption of which the word jute is formed. Many Jute-bags reach this country under the name of gunny-bags, and are often used for the packing of cotton. Gunny-bags are, however, often made from the fibres of another plant, *crotolaria juncea* called in Bengal *gonî*, whence their name. The Jute used in Europe is always employed unbleached to make sacks for packing fruits, hops, opal, etc.. The finer qualities are called Hessian, after the custom of the Scotch factories. There is an almost universal but erroneous notion that Jute can not be bleached. But Mr. J. Burnett, of Dundee, bleaches it very successfully, and gives it a white appearance, intermediate between bleached hemp, flax and silk.

Another popular prejudice is that Jute possesses a disagreeable smell. This is entirely erroneous; its peculiar smell is no worse than that of hemp, as all persons of experience agree. The best kinds of coffee are transported in Jute bags without any deterioration of flavor; and all kinds of grain are occasionally packed in it successfully. This erroneous impression proceeds from the treatment which the material undergoes in many factories, where, in order to facilitate the spinning, cod-liver oil is used to grease the fibres. The material itself is surely not responsible for this odor. That Jute can not stand dampness as well as hemp appears to be true, but this is probably caused by imperfect mode of its preparation from the stalks. Hemp prepared in an improper manner possesses the same defect.

The consumption of Jute in Europe is increasing at an enormous rate. It received a great stimulus during the Crimean war, when the exportation of Russian flax and hemp was almost entirely stopped, and hundreds of thousands of spindles in England and Scotland would have ceased to operate had not the East Indian Jute supplied them with a material, which has since obtained such a hold on the public that now two million hundred weight of Jute fibres are imported yearly for the British flax and hemp mills.

A new and curious application of Jute has recently made its appearance. We refer to its employment as the material for ladies' "coils," "chignons," "waterfalls," and "switches"—a purpose for which the length and lustre of the fibres render it well adapted. The old fashioned prejudice against false hair seems to have passed away, and it is useless to argue the subject against the fashion. In fact, looking at it from the stand point of practical economy, it is better that women should have ready made coiffures, which can be quickly adjusted, than that they should spend hours every day over the toilette; and we do not see why the use of the cheap and clean vegetable fibres of the Jute should not be preferred to the expensive and not always wholesom practice of wearing human hair cut from strangers, living or dead.—[*The Manufacturer and Builder.*

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent, Oil Cake Meal, 22 2-100 per cent. For life-sustaining properties to all stock are not subject to sudden changes of weather or over-driving it is equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food, generally mixed with the meal of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and gloss of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $40 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, Klog street, near Third. All orders will receive prompt attention. Address—

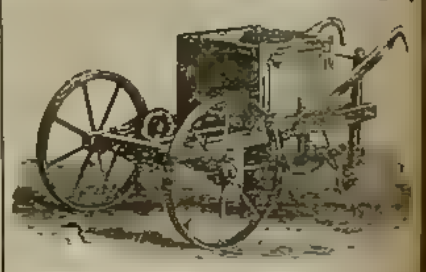
TRUE'S

IMPROVED

POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes structed

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such slices as the farmer may prefer; drops these pieces all the most perfect regularity, and covers them perfect and does all this as fast as a horse can walk over ground that can be plowed.

No intelligent farmer can see that an implement with which one man can, with the aid of a boy plant six acres of potatoes in a day, is of inestimable value because the days in which PLANTING can properly be done are few, while he has all summer and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise be overwork him or be left undone.

The undersigned have the sale of this Great Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune right Particulars and Catalogues can be had at our office

INSECT AND ANIMAL LIFE will be beautifully represented, and the celebrated Du Chaillu GORILLA which was exhibited ALIVE in Paris, has been added to the already large collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M to 5 and 7 to 9 P. M.

Horticulture.

WHEAT AND WINE.

These two important products of our State are now of so much interest as to make everything that effects them important to every class of producers.

Of Breadstuffs Australia has received from us many surprises in the last few years, therefore the following information, which we clip from the *Queenslander*, will be of interest to our grain growers.

BREADSTUFFS—JANUARY 1, 1870.

The flour market remains very inanimate, and generally speaking there is more disposition on the part of holders to force sales than there is on the part of buyers to operate. The tone of the market is decidedly weaker, and quotations are now given at £14 per ton As regards the future, there is little hope of an improvement South Australian new wheat is already in the market, and is offered at 4s, and sold at 4s 4d per bushel, which in the case of the latter, is a decline of about 1s per bushel in the course of a few weeks. On the other hand, it has been stated that the Short Australian average will hardly be reached this season, but then the accounts of the wheat crops in Victoria and New South Wales state that they will be very abundant. The crop in the neighborhood of Warwick and Allora are reported to be large as compared to the acreage, but the amount in the aggregate is too small to have an effect on prices, which will still be ruled by the South Australian markets. The sale of a parcel of Warwick wheat is reported at Toowoomba, at 5s per bushel.

Our *Vinegardists* will find in the following item matter of interest. It will show them that Australia must be a large consumer of wine, and therefore a market for our wine, provided our vintagers will make good and pure, wine, it will show them also the exertions made at the Island of Madeira to secure a large vintage:

Madeira sends good news to all that part of the world—and it is a large part—which thirsts for the time when the wine that takes its name from the island shall again be an attainable luxury for moderate fortunes Years ago the vintage of the Island was again and again so fatally blighted that, in the bacchic sense, Madeira threatened to become a thing of the past. The quantity of the pure wine which now exists in this country is so small that it is a high distinction to have a few dozen bottles. At last, however, words of comfort have been sent to the disconsolate epicureans. Appreciating the value which is set upon their more generous products, the islanders are diminishing the area on which they grow the sugar cane, and are bending all their efforts to the cultivation of the vine. The nature of the soil and its sloping surface particularly fit it for the purpose; and already, it is said, clusters of grapes are waving on places which were cover before turned into vineyards. The coming vintage will, in all probability, be so rich that, a year or two hence, it will once more be practicable for men of moderate incomes to place pure Madeira on their tables.

USE GYPSUM.

Now is the time to use Gypsum on the young Grape Vines, and on the Pear Trees, dust the Gypsum over the Vines and on the Trees with the hand. This will completely destroy the Pear slug and prevent their increase, it is also excellent as a preventive of the mildew on the Grape, while at the same time it greatly invigorates the Vine and aids in retaining the amonia and the moisture in the soil.

Gypsum is also a capital article to improve the beauty of a grass lawn, as it gives vigor to clover or grass, causing it to make a quick and thick growth as also to give it a rich deep green tint. Gypsum is a great fertilizer and should be used freely.

RAIN—RAIN—RAIN.

"It could not come any better if we had ordered it ourselves!" This is the oft-repeated remark of many farmers, who call on us and comment on the season.

Yes, this so. Man could never arrange so well as *He* who giveth "the early and the latter rain."

FRUIT AND DRINK.

P J Quin says in his new work on Pear Culture: "If the time should ever come that one-half the amount now spent for alcoholic decoctions should go for choice fruit, what a difference there would be in the homes of the poorest classes, now rendered almost desolate by the use of intoxicating drinks."

A BUSHEL of ripe tomatoes brought into a family will drive out a box of doctor's pills.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series o Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

D. E. CALLAHAN,
33-1 PROPRIETOR

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING APRIL, 21st, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our *Journal*, to which we would direct their *special* attention.]

We present our readers this week with a sermon on *Matrimony*, by the Rev. Dr. Bellen of Boston, which will speak for itself. This sermon and a Letter to Young Men, by Dr. Ware of Boston, we place in connection as important now to our whole country.

When our Government and Political Institutions are in danger how quickly and nobly the people rallied in defence of "Our Country," its "Flag," and our Homes, but of what use will our country or our flag be—if we have no permanent Homes? and what can our country be if the young men of the land are not Physically, Intellectually and Morally sound. These questions induced us to lay before our readers these subjects, for while we are striving to improve the races of our animals, in Heavens name we shall not allow the races of immortal beings to degenerate.

Our European Letter will be found highly important to our agriculturalists, showing them what is going on in Europe for their cause.

The Greeley Essays are as usual full of sound logic and good counsel.

JUTE. Its character, uses, Consumption, &c., should be studied.

We have several important Essays and Letters for our next which came to late for this week.

Reports of May Day and the festivities will be in our next.

Opium. Having many inquiries by letter and otherwise, we have collected all the facts touching its culture, value, &c., and shall give it entire next issue. The article is too long for our space this week. *Fine* opium seed can be had at this Office.

Benecia Colleges. By reason of the length of our European and other letters, we are compelled to lay over the sketch of Benecia College, &c.

Our New York correspondent, M. A. S., will be welcomed by his many friends, his letters are read with more than ordinary interest.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

We acknowledge the receipt of a complimentary card of invitation to the Fourth State Fair of Louisiana, which takes place at New Orleans, and commences April 23d and continues *eight days*.

This exhibition embraces the Mechanical and Agricultural; and in that sunny clime, with the rich productions of that region, must be a very interesting one.

We hope, by-and-by, when our railroad facilities shall be more fully developed over our country, to be enabled to attend a dozen State Fairs annually

We return our acknowledgements to the President and Secretary for their letter and card with courteous invitation. We wish them a complete success.

MUSIC RECEIVED.

We are indebted to M. Gray, Esq., our well known and popular music dealer, on Clay street, for a collection of very choice music, among them are as follows: three songs, composed by Claribel "Hidden Voices," "Weep no more Darling" and "Meet High"—all very beautiful songs, for the words and sentiments are pure and good, and the music sweetly blending makes each song complete in all its parts. Also a collection of "Dancing Music," Waltzes, Redowa's, Gallops, Polkas, &c., all new and choice.

Thanks for this collection, as we always hail new music with welcome *notes*.

THE SEASON, CROPS, &c.

It is not needed for us to recapitulate all the various items we receive from every source to prove that the present will prove a very prosperous year, for it is written on our well cultivated *grain fields*, on our *healthy vineyards*, and our *well pruned orchards*, upon every spot where proper care and attention has been given, there is seen certain prosperity, and we know of no section where due care has been bestowed that is not now prosperous.

We see many persons who report this field and that region where grain is blighted, another place where the north wind has burnt it up, and many reports where the crops *are not* prosperous. All this we admit, but when we go and examine them we find the cause of this *blight* and *loss of crops* easily explained: *shallow plowing, late planting* and *poor soil* explains it all, we do not find this where summer fallow, deep plowing and early planting has been practiced; there is always a *cause* to every effect, and the *effect* of *shiftless* and *unthrifty farming* will always be *bad results*. The tiller of the soil who spends his time at the whisky saloon, the card table and horse races, will generally find his crops run short, his purse grow light, and himself come out at the *little end of the horn*. The use of tobacco, whisky and cards, with time spent at the races will generally eat up a bigger crop than any farm such a person can produce, while temperance, industry and care with a good "Farmer's Library," will secure some thirty, sixty or an hundred fold. The grain crop never gave better promise, or was more free from blight of every kind, we mean always where proper care has been bestowed the grain on all our summer fallowed land, and on all that was early planted gives great promise.

FRUIT COMING.

Strawberries will now come in rapidly, green gooseberries will be in market in two weeks, blackberries will come in June and a heavy crop; raspberries about the same time—cherries are swelling rapidly and will be in our market in a few weeks plenty, they will soon show their rosy cheeks with us from some early corners.

Fruit Vale, that once was so famous for small fruits, where in 1867 there was *eighty acres* in strawberries, no strawberries are grown. There was also a great many growers of this fruit, there is none left now, but cherry currants and gooseberries have superceded them.

Blackberries that were grown but little there, has now some 60 to 80 acres, they have taken the place of strawberries. *Blackberries* do well in Fruit Vale. Mr. Nichols the last year grown *one quarter of an acre*, sold one ton of fine fruit and used a large amount in the family besides. Mr. Nichols believes with well-skilled and proper management a man can make a good living on *two acres* by raising small fruits. Now this will teach the author of that nice little book *Five Acres too Much*, that he must send out a new book "*Two Acres Enough.*"

Our orchards and vineyards never looked better or gave greater promise, every kind and variety of fruit will be abundant. The late frost in some places *nipped off* some of the blossoms, but enough for the tree to bear will remain and be the better for it.

Cherries will be very, *very* abundant, probably we shall have them with us in a few days from the region of Potah or some other warm spot.

Peaches will be of excellent quality this season and abundant. The Alhambra gardens at Martinez will send probably 2000 baskets from a new young orchard of choice kinds, peaches that will make the mouth water.

Apricots will also be abundant and very early. Pears and apples also abundant, and so abundant that some new plan must be devised to find a market for them, probably a petition got up by the Fruit Growers to the Railroad managers that they may ship the fruit East at half price to feed the hungry (charitably) for Eastern folks are hungry for our fruit.

In our next we design to give an illustration of a new Fruit Box for this purpose, one that will be found the best yet made, and offered without a patent right, free for all to make.

Small fruits will be abundant everywhere and cheap. Strawberries are now getting quite plenty, selling lower than usual at this season, (see market report) other small fruits, Gooseberries, Currants, Raspberries and Blackberries will be abundant and cheap. We annex some items on these fruits.

Our fruit supply must always be good owing to the rapidly increasing cultivation of choice fruits and a better system of doing the work. *Cultivation* has taken the place of *Irrigation*, and the consequence, a richer, sweeter and higher colored fruit, in place of the former pale, watery and flavorless fruit so abundant; besides fruit thus grown will keep better and not be so injurious to eat, for all fruit thus forced and full of watery juices instead of the natural saccharine juice, will produce cholic and dysentary and many other diseases. Experience, careful reading and study, practically applied by labor will always bring rich, luscious, juicy and high colored fruit that will command the *very highest* price.

INSURANCE.

A Circular relative to Insurance, was left at our office, coming from an Eastern Company, which rather seems to assail other Companies as to their management and safety. As we know we have California Insurance Companies as safe and as well conducted as any Eastern concern, we reject such Insinuations, and hope all true Californians will do so likewise, by giving their business exclusively to our California Companies among which none can be safer or better conducted than the

PACIFIC INSURANCE COMPANY

with a large capital and a large surplus of assets.

When Eastern Companies assail Californians they must look out for rebounding shots. The Dry season coming our Farmers should be made safe by Insurance—they can be so with a Policy of the Pacific Insurance Company which is beyond all question safe.

OUR AGRICULTURAL FAIRS.

Our Agricultural Fairs the present year could be made of great value and importance for the promotion of the cause of emigration, and of the right kind of a population too. If those who are the Managers of our Fairs would but take hold of this work in season, and send out their announcement, with time and place of holding the Fairs, and also send out their Lists of Premiums, so that all those who could become competitors could lay their plans and be at work, so as to make these Fairs extensive and of great interest to our own people, and also show to the many thousands of visitors from abroad who will be with us during the Fair season, what our State can produce.

It is to be regretted that the managers of our State Fair, and all our District Fairs, are so late in sending out the announcements of the plans of our Fairs.

It has been a general complaint among the many who are, and many more who would be contributors to our Fairs, that they had not heard of any Fair until it was too late to make any preparation, and many never hear of them until perhaps a few days previous to the time of their opening.

To make our Exhibition of permanent good, to draw out a proper spirit of enterprize and induce a laudible rivalry and competition, the whole plan of our Fairs should be made known at the opening of each year, or as early as possible after New Years.

There can be but little use to go to the expense of sending out great showy Posters a few weeks before the Fair, containing a long list of Premiums for articles which have never been planted, manufactured, or designed. If Premiums are to be offered they should be known in season for the Farmer to plant the seed and cultivate the crop; the Manufacturer to make and prepare the goods; the Mechanic to build his machines or Implements, and the Artist to complete their Designs. It is too often the case here that our "Halls for Exhibition," are often either partially or poorly filled by reason of this delay on the part of the "Managers of our Fairs."

This neglect should be remeded this year, in fact by immediate action now, it is getting late already. May Day is knocking at the door of time, and not a single announcement of a Fair in our State yet, and only three months to the Fair Season, while in all the Eastern States their Premium List have been scattered far and wide for months, and all their principal plans made—time and place known, and all their committee appointed.

We would earnestly hope and would respectfully suggest to all those who are to control our Fairs the present year, that some immediate action should be had, so that those of our people here who can cooperate, and who would take an interest, may be advised early, with a view to make our Exhibition truly worthy a State so rich in her productions.

No one can for a moment doubt but that we shall have a very large emigration here this coming summer and autumn, and also a very large number of transient visitors who will make the season of our Fruits and our Fair Season the time of their visitation. Therefore it is all important that our Fair Season should be announced by the managers of our State Fair and all our District Fairs, so that the people of other States may lay their plans to be with us then. This will be greatly to the advantage of our State in promoting the spirit of emigration and do more to bring us the best kind of people, than all the Emigrant Aid Societies combined. For it would show what our State can produce and manufacture, and bring us people of means, influence, genious, skill and industry, instead of more ignorant laborers, or the poor from the parish workhouse, or those who merely come to find work. We must first make our State prosperous, then we shall need laborers.

We therefore appeal to the Managers of our Fairs, to them is confided the care for the time being of this all important duty of arousing an interest among the people, and inducing our Farmers, Manufacturers and Mechanics, to do their best the present year so that we can show to the thousands that will visit us, what California can do.

There should be no delay now, for the work is great and the time is short, and the people must be fully informed and instructed in order to make our Fairs more successful than ever before.

SPECIAL NOTICES

We call the attention of our Harvesters to the advertisements of Messrs. Treadwell and Co., for the New and Valuable Machinery offered by them.

Also, to Messrs. Marcus C. Hawley and Co., who advertise Superior Machines and Valuable New Agricultural Implements.

Also the advertisement of Messrs Arthur and Son, for their famous Wagons, and other goods offered by them.

Our Farmers should make their purchases *early*, and thus they can select the Best.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

EDEN DALE COMPANY.

This Company has been arranged for the growing of Tropical Fruit on a large scale as set forth in their advertisement in our column this week. The Company is composed of some of our best and most respectable men, and the officers of the association are men that will make the enterprise successful. We refer to the books of the Company which can be had at 344 Montgomery Street.

MAY DAY—ITS FESTIVALS.

"Wake, and call me early mother
For I'm to be Queen of May."

Tens of thousands of little hearts are now revelling in the happy thought of approaching May Day, and what better incense can go up to Heaven for "Spring Time," than the gathering groups of sweet children, with their garlands and baskets of flowers, singing their merry songs. It is indeed a fitting anthem for the season, and the smiles of joy and the happy words, greetings, songs and crownings, will rise as sweet incense to

OUR FATHER IN HEAVEN.

We learn with pleasure that Mr. Woodward has with a liberal spirit thrown open his delightful Gardens on Saturday next, to the Teachers and Pupils of all the Schools. The happy sight then and there witnessed, would form a picture which is worthy every Art Gallery in the land. We hope our Photographers will make one of that happy scene.

May Day falling on Sunday, it will be improved on Saturday and Monday as a general rule, but throngs will use Sunday as is the custom of Europe.

All Hail to Glorious "May Day," the Season of Flowers.

ABUNDANCE.

Abundance is written everywhere, on our grainfields, on the trees in our orchards, on the fresh grown vines where large bunches cluster upon the bending, tendrils of our blackberry and raspberry vines, and upon the fields of strawberries that make the earth red with their luscious berries.

Why is it that when the God of nature is thus lavish in its bounties there should not be a corresponding abundance of gratitude in the hearts of those whose harvest fields are written all over with the goodness of Providence.

REARING POULTRY.

Two weeks since we spoke of the poultry grounds of Messrs. Nichols & Willard of Fruit Vale, at Brooklyn, Alameda county. Since then we have collected the following description of their plans and houses, and give them as a guidance for others who design to raise fine breeds of poultry, which are always best as they are sure layers, and their results always more profitable.

The poultry ground covers two acres, and is divided off into suitable departments for the several needed uses. The hennery occupies half an acre, the breeding yards are 10x32, neatly railed in, a grass run, 48x60, always kept clean and fresh; a running yard of 100x100 and several small yards in divisions for the setting hens.

Each breeding house is 4x6, and elevated 2½ feet from the ground. In all these houses the boxes, &c., are removed every day and each house swept clean, the bars taken out, cleaned and left in the sun. This careful attention gives health to the poultry and "*pays.*"

The large roosting house for the general stock is octagon in form, 12 feet in diameter, 7 feet high, the roosting bars are low down 18 to 24 inches from the ground, moveable, all taken out every day and houses cleaned. These roosting houses cost $130, sides slatted, roof compact and conical, all the buildings are neatly made, constantly kept clean with whitewash, grounds neat gravel and pebbles. Fences and building by their white and cleanly look give an orderly and pleasant look, vastly different from many of the unsightly places called poultry yards.

The varieties we examined were Light Brahmas, White Leghorns and Crosses with several other kinds crosses, and the pure breed are kept distinct.

As a proof what good care will do, we give a sample of the laying properties of these Brahmas.

From two Light Brahmas for February and March they gave *one hundred and two eggs.*

From six Pullets shut up for laying, the six have averaged thirty eggs per week from last January. This we call laying a good foundation of character.

Persons interested in poultry will learn something about order and neatness in poultry yards by visiting this place, we refer to their advertisement in our column.

THE PREVOST FUND.

The Committee of the Prevost Fund would respectfully invite all the friends of the late Louis Prevost—the PIONEER OF SERICICULTURE—to forward to them such contributions as they are disposed to make to this Fund; and it is to be hoped that those Journals over this coast that have always spoken so kindly of this most-worthy Pioneer, will present this matter to their readers, and thus enable the Committee to carry out the plans designed for the Widow, and erect a suitable Testimonial to the Memory of Louis Prevost.

Contributions can be sent to the Treasurer—Judge D. S. Payne, San Jose; Heatrch and Berton, Bankers, San Francisco; CALIFORNIA FARMER Office, San Francisco.

At an early day the contributors will be invited to meet and arrange the disposition of the Funds that shall be raised.

THE BRAIN—CURIOUS FACTS IN NATURE.

In the fish, the average proportion of the brain to the spinal cord is only 2 to 1. In the reptile, the ratio is 2½ to 1. In the bird, it is 3 to 1. In the mammalia, it is 4 to 1. But in man, it is 23 to 1. No less remarkable is the foetal progress of the human brain. It first becomes a brain resembling that of a fish; then it grows into the form of that of a reptile; then into that of a bird; then into that of a mammiferious quadruped, and finally it assumes the form of a human brain, "thus comprising in its foetal progress an epitome of geological history, as if man was in himself a compendium of all animated nature, and of kin to every creature that lives.—*Utah Magazine.*]

BUYING A FARM,—OR LEASING.

The very large class of men in America who are either leaving other pursuits to establish themselves in the country, or who, having been brought up on their fathers' farms, are about starting for themselves, find the question of buying a farm to be, for the time, the all absorbing question of their lives; and it is very natural that it should be so, for the business is, emphatically, one of a lifetime.

Being, unfortunately, the occupier of leased land, which has so much of another man's affection and interest invested in it, that its purchase is impossible, I can speak with very cordial earnestness on this point; and I can all the more strongly urge absolute ownership, as of all things almost desirable, because I daily feel the uncertainty and unsatisfactoriness of a leasehold tenure.

So much of the man himself, so much of his daily sweat of his face, so much of his hope, and of his anxiety, goes to the ground that he tills; so many of the associations of his home, with its joys and sorrows, are entwined around every tree and shrub in his dooryard, that I can conceive to him no more dismal thought in life than that some day, he must pull himself up by the roots, and, further on in his years, must take fresh start with all his interest to cultivate anew. Apart from any question of economy or of interest, I would strongly urge every man, who finds it possible for him to do so, and who means to end his days on a farm, to buy his land. Let the farm be smaller than he could hire, and less convenient, let him go in debt for it if he must, but I deem him to be a happier man who owns a small place, even with a mortgage for his shadow, than is he who, with better facilities for his daily occupations, and better conveniences for his daily life, has hanging before his eyes the fact that some day, when he is older and less able to commence farming again, he must resign his improvements to his landlord, turn the key on his home, and pitch his tents in strange fields.

The question of economy, however, cannot be set aside. There are, I know, many farmers whose aim in life seems to be to see how much money they can screw out of the land to farm on bond and mortgage, and the more often they can move and apply their leeches to fresh ground the more fully they will gratify their lowest ambition. They save at the spigot of improvement, and are unconscious of the open bung of exhaustion; in their way they are happy. But every man who means to take a broader view of farming, and recognizes the fact that the most substantial part of the returns of his labor, and of his estate, consists in better buildings, better soil, and better stock, will see a sufficient reason for wishing to become the owner of the fee of his farm. In other transactions of life, where the principle holds good that any thing is worth what it will fetch in the market, business men invest money with a view to the chances of its return at such time when they choose to sell. In farming, this principle does not hold good—at least not with regard to the farm itself.

It is better that the question of selling be not at all considered, for a valuable farm is always a very difficult thing to sell, and very rarely brings as much as it is worth. There are persons who speculate in farms, who buy worn out lands at low price, and, after improving it, sell it at a high price. They often make money by the operation, and they generally do good. They are a useful class of enterprising men, but they are not the kind of men that I have in my mind now—men who intend to "follow" farming as a permanent occupation, who have made up their minds that it is the thing to do, and who regard it not as a mere an enterprise as a living.

To such, I say, buy your farm judiciously, and of course, as cheaply as you can. Make up your mind whether it will suit you, before you buy it, and having bought it, don't entertain the idea of selling it, nor consider the money you invest in improvements in the light of the selling value they will add to the farm, so much as with reference to the annual return they will bring in economy, economy, or fertility. In short, consider your farm as a part of yourself, and let it "grow with" your growth, and strengthen with your strength—you will find your yearly advantage in so doing.

Under all circumstances, make the purchase of a farm a matter of the most careful study. Probably it is the only farm that you will ever buy, and it will have very much to do with your prosperity and your happiness throughout your whole life. If you have been bred a farmer you will be able to decide what you want, and to form an opinion that will be more satisfactory to yourself at least) than any that you will get from books or from men.

If you have passed your previous life in some occupation, and now mean to make your living by farming, the best advice that any one can give you would be to go and pass a whole year with the best farmer you know. Become a regular "farm hand," with an understanding that you are to be allowed to learn to do all kinds of farm work. "Work away for dear life at the farm, and make him tell you all he knows. Take it is your money instead of his that buys every ton of manure he expends." After such experience, and with the aid of what you can learn from books, you will probably be able to judge for yourself, better than any one else can for you, what sort of farm you want.

* Talpa.

LEGAL DIVORCES.

ABSOLUTE DIVORCES legally obtained in New York, Indiana, Illinois and other States for causes from any State or Country, legal everywhere, desertion, drunkenness, non-support, etc., sufficient cause; no publicity; no charge until divorce obtained. Advice free. Business established fifteen years.

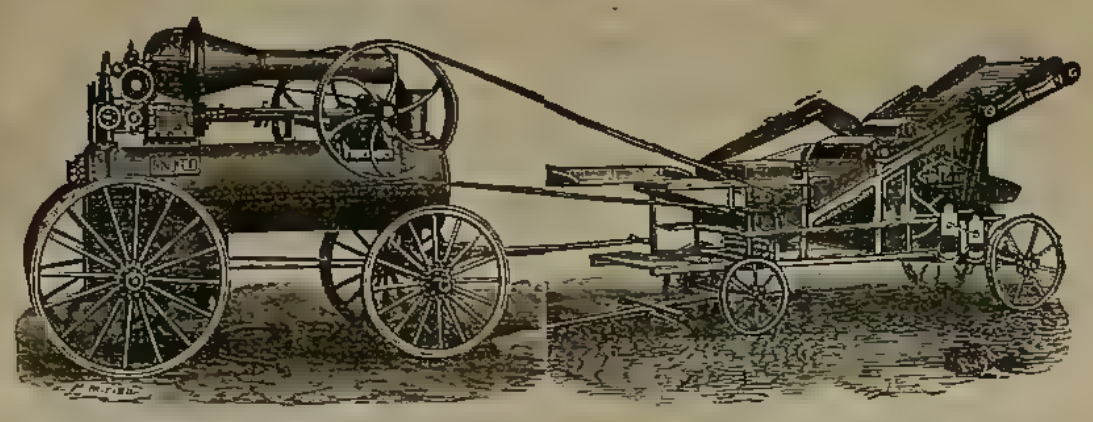
No 78 Nassau Street, New York City.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.

For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California, can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN.

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco.

FRESH ALFALFA.

THOSE WHO DESIRE TO SECURE

FRESH ALFALFA SEED,

Should send in their orders early this year. Last year there was a very short supply, and what is Imported this year will be sold early: Letters of inquiry, and orders received at the

FARMER OFFICE,
320 Clay Street, (up-stairs.)

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

Young Man Wanted.

We want a smart and active young man from 12 to 18 years of age, to attend to our Reading Room and Museum, Mailing Papers, etc.

None need apply who cannot bring the best testimonials of character and ability. Must be a good penman and quick at figures.

To such a young man an opportunity of advancement will be given.

A young man whose parents or friends reside in the city would be preferred.

Apply at our office only between 4 and 5 P. M.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all combination Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER."

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

GENERAL AGENTS FOR THE PACIFIC COAST, Nos., 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

A SONG.

'Tis not the murmuring voice of Spring
That stirs my heart and makes me sing;
'Tis not the blue skies, bubbling o'er
With sunshine spilled along earth's floor;
Nor yet the flush of bursting rose,
Nor bloom of any flower that grows.

It is that long, long years ago,
When all the world was blushing so—
It is that then my cheek blushed too,
My heart beat fast for love and you:
There was a music in the air
I fail to find now any where.

And so, when Spring comes wandering by,
I lose the thread of misery;
Trusting the promise of her days,
I tune my voice to sing her praise,
And cheat myself with the sweet pain
That in the spring Love blooms again.

HOLY MATRIMONY.

This is the fifth and final discourse of the series delivered by Rev. James A. Bolles, D. D., Rector of the Church of the Advent, at that church, on successive Sunday evenings. This one was delivered on the evening of February 6th.

"This is a great mystery; but I speak concerning Christ, and the Church." Ep. v: 32.

Not long ago, a distinguished clergyman of the church was on board an ocean steamer, with a party of New England men who had become demoralised on the subject of marriage, either from their residence in China, or as the natural result of principles imbibed before they left their homes for that distant country. These men not only referred often to their own happy freedom from such bonds, but really seemed to think that Holy Matrimony was one of the blunders of the world, from which in time mankind would be emancipated.—On one occasion the conversation was very earnest, and inasmuch as they were well educated and well read, the arguments with which they assailed the marriage relation, became apparently very cogent and forcible. At length one of the gentlemen observing a smile upon the face of the clergyman, turned to him and said, "Well sir, what have you to say to this doctrine?" "Nothing," was the reply, "except that it is the most fortunate thing for you that your father and mother held views entirely the opposite of yours.—Pray, sir, tell me, on your principles what would your mother have been? and what chance would you have had of knowing your own father? and what kind of a home would you now look back upon? This whole discussion apart from its wickedness is simply absurd. You owe the good name you have, one of the best in New England, and, the good blood that flows in your veins, and your present high position in the world, as a man of intelligence and wealth, entirely to the principles which you deride."

All this was said without excitement, but in a tone of cool contempt. The effect was amazing; these gentlemen felt and frankly admitted the absurdity of their arguments against the sanctity of an institution, in behalf of which they were themselves the living witnesses.

But what an illustration of the state of society among a large number of persons here in Boston, who would be nobody and nothing, if their fathers and mothers had thought as they do upon the subject of marriage, and had acted upon their principles? What an evidence of degeneracy in these unworthy sons and daughters of New England, the highest glory of which has been the maintenance by our forefathers of the institution of marriage, and of the sanctity of family and home. Of all the redeeming features in Puritanism, and which have been of more influence than all other causes combined to perpetuate its peculiarities, and make them illustrious, not any can be mentioned or thought of as at all to be compared with the old New England homes, transplanted to this soil from the Church of England, out of which our Fathers came, and to which they were indebted for this signal mercy and glory.—How it is possible for any New England man or woman to lift up hand or voice, for the desecration of marriage or the family, without the crimson blush of shame, or the deeper dye of remorse of conscience, is more than I am able to comprehend, except upon the old heathen maxim, "whom the gods wish to destroy they first make mad."—But how horrible, not to say senseless and irreverent are the ideas of these people as to the objects of marriage, family, society, government and law. All they seem to think of is the present temporal, social, sensual, or as they choose to call it, intellectual improvement and enjoyment of individuals, as though individuality and not fraternity should be the basis of all. They seem to have no idea of the generations which have gone before us, nor of the generations which are to come after us; no idea of father and of grandfather, and the blessings of a glorious ancestry; none of children and of grandchildren, and an ever living progeny going on to the very end of time, and extending into eternity, for the unity and brotherhood of which all society exists. But so far as I am able to understand their incoherent ravings, they seem to think that all human institutions and especially Holy Matrimony, are but civil and temporary arrangements, for the mutual pleasure of the parties concerned, and in the latter case that men and women may cohabit with less of law and even of instinct, than "the brutes that perish." But in opposition to all such wild, insane and mad projects of reform, we proclaim as the voice of nature, combined with the voice of universal Christendom, that the foundation of the family is Holy Matrimony, the foundation of society is the family, and the moment you divest these institutions of their sanctity and their divinity, that moment you divest all law, and all government of their binding obligation upon man as a being accountable to God; nor can you degrade them to the mere level of human, social and temporary regulations without such an act of Atheism as would exclude the great and eternal God from the heart and thoughts of His creatures, in matters the most important and momentous to their welfare and happiness, in this world and that which is to come.

My subject to night is the true christian family and home. "France needs a Washington," said Lamartine—"France needs a People," was the reply of one of her orators—"France needs mothers," was the yet more profound remark of Madam Campan to Napoleon. May we not add, as the great need of our day, and even of Republican America—fathers and mothers and sacred homes. Fathers—not merely the sires of a progeny, who recognise in marriage only a civil contract, and nothing but the legalized union of the sexes, but fathers whose hearts respond to the fact that holy matrimony is a divine institution, the ordinance of Heaven, the blessing of Paradise before the fall, an emblem of the love of Christ to his church, and who therefore, recognise in the depth of its meaning and designs a sacred and unfathomable mystery, making them the representatives, to each one of their children, of the great and eternal Father of us all. Mother—not merely those who have no higher, or purer, or better affection for their young than that which the animal instincts afford, but mothers who understand that "the church is in Christ as Eve was in Adam," to use the language of the judicious Hooker, and who, therefore, recognise in themselves a type of this relation, to whom God has spoken, as by the daughter of Pharaoh He spake to the mother of Moses—"Take this child and nurse it for me."—Homes—not a mere collection of individuals, bound together by no other tie than those of mutual interest or consanguinity, in which the members are mere lodgers until such time as they can provide better for themselves, or so long as the law requires: but homes that are all the Almighty designed our homes to be—God's household, God's church, God's family, and a blessed type on earth of the family in heaven—God's Temple, in which the husband and wife are "the Priests of God," declaring to one another and to the world, by their union, the mysterious power and the mysterious wisdom of the Almighty, and manifesting forth the glorious fact that there is upon earth holiness, reverence, worship and affection, altogether independent of self.

In such a home the father rises up to the dignity of his position, as the Priest of God in his own house, and he shrinks not from the discharge of its sacred duties in offering up the daily sacrifice of prayer and praise. In such a home the mother cannot be contemplated apart from the father, for they are both one in office to the family and both essential to its perfect discharge. What is lacking in one is made up by the other. The father speaks by authority, the mother is the softening medium to divest that authority of terror, and make it effectual. "The father instructs, the mother instills; the father commands the reason, the mother moves and influences the instinct; the father may finish, the mother must begin; the dominion of the father is over the head; the empire of the mother is over the heart."

In such a home there must be a responsive Liturgy, having its confession of sin, its petitions for mercy, its thanksgivings for blessings received, its acknowledgments of providential guidance and love, its recognitions of the unity and brotherhood of the church; its prayers for the penitent, the prodigal and the outcast; its supplications for all sorts and conditions of men. And at the same time, the language of this responsive Liturgy must be so plain, earnest and familiar as to be adapted to the capacities of all; and yet so dignified, impressive, elevated and solemn, as to command the reverence of the wisest and the affections of the best.

In such a home, it would be a great blessing to have an oratory—a consecrated place of prayer—having its family altar, its family Bible and Record, its book of Common Prayer and domestic liturgy, its select library, its Christian emblems and memorials, its recorded texts of Holy Scripture meeting the eye, and its evidences of sacredness and consecration to the purposes of devotion. And most extraordinary is it, that our Christian men of wealth, when they are designing and building their palaces, so seldom think of the oratory—the place of prayer. They provide in their houses for every convenience and every luxury; they know the importance of having "a place for everything and everything in its place," and yet they too often forget the God whom they profess to adore; they provide no special place in their houses for His worship, to which their best affection may cling where the family altar may be raised, and on which the daily sacrifice of prayer and praise may be offered; all this they leave to accident and chance, and thinking that God may be worshipped anywhere and in any place, they adopt a course, the result of which is, that He is scarcely worshipped at all in the family and in the closet. Let no one misunderstand these remarks. Such an oratory as is here contemplated is not an absolute necessity, so that the not having one is any excuse for the omission of prayer. For God can be as truly worshipped in the hovel as in the palace, in the crowded street or upon the field, as in the most magnificent cathedral. But we are local beings, and are much influenced by local circumstances and associations. Hence the importance of having some consecrated place of prayer, not only for the public worship of the church, but for the social worship of the family, and to which any member of the family may at any time resort for purposes of devotion. Our Saviour evidently had some such place in His mind, when He said, "when thou prayest enter into thy closet," for the word here translated closet, does not mean, as is generally supposed, a small, private apartment, but it means that very place for social and secret prayer which every Jew had in his house, and which was so located, like the chamber of Daniel, that the hands could be raised and the face turned toward the holy temple. And then we have the example of our blessed Lord Himself, who had not only His consecrated time, but His consecrated place of prayer.

In such a home, there must be its festivals and fasts, its days of rejoicing and its days of sorrow; its birthdays of nature, its birthdays of grace and its birthdays of glory, and also its catalogue of departed saints, whose affectionate words and names will ever be cherished in the memory; and perchance its catalogue of martyrs, too, in those who have suffered and died in defence of the household; and possibly its heretics and schismatics in those who have presumed to divide and to rend asunder; and its returning prodigals in those who have found out at last that "there is no place like home," and who have been received and welcomed back with kisses and open arms and tears of joy.

Such a home can never die. It is as indestructible as the heavens; and though its members one after another may disappear from the eye of flesh, yet they all live, and must be eventually garnered up in the everlasting home of the skies. Can it be otherwise? Is not such a home a type of heaven? Have not the members a bond of union stronger than death; and having been one in spirit and in communion with God, in the church militant on earth, must they not forever be one in spirit and communion with God, in the church triumphant in heaven. Oh! we wonder not that the author of the "Rectory of Valehead," where the true Christian home is more particularly and beautifully described, should exclaim, "Merciful God! what a sanctuary hast thou ordained in the Christian home!"

(Concluded next week.)

TO GIVE IS TO RECEIVE.

We must bless if we would receive a blessing. We must pour the water from the cup if we would have it filled again. Life is an exchange of bounties, a transfer from one to another. Earth gives her portion to the flowers, they send their fragrance unto man, and man gathers them, decks the path of friendship, and makes hearts sweeter with their rich fragrance.

The sky is mellower for the passing clouds that lowers beneath it. The clouds receives its glory from the orb of day.

All things are tributary to each other. The glow-worm lights the traveler's path; the pebble turns the tide.

Rills fill the river; rivers send their vapors forth to fill again the rills. If love flows from our soul into our neighbor's, something must be dislodged within his breast. It may be envy, pride, or hate—what matters it? or it may be sweetest strains of gratitude that will gladden some ear, though not our own. We are but workers; but not, like earthly laborers, waiting for our pay. It comes in God's time, and always at the needed moment. Keep the waves in motion. Roll the ball of love heavenward. It will strike many hearts, and gather accelerated speed. Pass the cup around. Bid the thirsty drink, for dust and mould will gather on the cup that stands unmoved; and the water it holds will become unfit for our own or another's use.

HOUSEHOLD RECIPES.

For a Bruise or Blow.

Apply hot water a long time with wet cloths. Beef brine is an excellent lotion for both sprains and bruises. A veteran among horses claims that it will almost set a joint or heal a fracture. Wormwood or tansy lotions are also good.

If your flat irons are rough rub them with fine salt and it will make them perfectly smooth.

Wood ashes and common salt wet with water will prevent the cracking of a stove.

Strong lye put in water will make it soft as rain water.

Half a cranberry, it is said, bound on a corn will soon kill it.

A bit of soap rubbed on the hinges of a door will prevent its creaking.

A bit of glue dissolved in skim milk will restore crape.

Scotch snuff put in holes where crickets come out will destroy them.

Ribbons of every kind should be washed in cold suds and not rinsed.

Good Nature.

A well-known modern philosopher thus sustains the mission of the Drawer:

"It is really worth more tew the world tew have a *good-natured man* born into it, and go into the good-natured business, than to have a poeck born and go into the poeckry bisness. Good-natured men work up into fathers, husbands, and brothers fust-rate, and without enny waste; they make good, follow-citizens, and every body feels as if they had some stock in them; they are as safe and pleasant as root-beer. The good-natured man an't always a statesman, nor an't always just the man for sekretary of the treasury; but tew grease the griddle of everyday life, tew soften the furrows, tew raise the despondent, and tew indorse sixty-day paper, he weighs at least a ton. I had rather be a good-natured man than tew have a seat in the New York Legislature; there may not be much money in it, *but there is twice the means of grace.*"—*Harper's Monthly.*

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

Miscellany.

THE REAL GOOD TIME COMING.

[The following excellent and really wise counsel and commendatory notice we find in the Mobile *Register* of April 16th.

This is the right spirit for all the South to develope, for it will do more to harmonize the sectional and political ill-will than all the wars and talking and preaching in the world.

Had the South long years since awakened the spirit of enterprise, and given their personal energies and capital to the development of their own resources, there never would have been a war—but their short sightedness and sloth awoke the spirit of evil, but an "All-seeing Providence" turned the evil into *good*—FREEDOM came, and with it new life, newly awakened aspirations for *Independence* and *Prosperity*—let this spirit be cherished, for it will eventually kill out the spirit of sloth and all unkind political or sectional differences, and our whole Union be the *Richer, Better* and *Happier* for its *Baptismal of Blood*.—ED. F.]

One of the signs of an awakening sense of the people of the South to their own best interests is seen in the extensive factories that are springing up in different portions of this section. In South Carolina, Georgia, Tennessee, Mississippi, and even in remote Texas, the economy of home manufacture having presented, as a mere theory, such an invaluable aggregation of results, is resolving itself into a thing of practice. There is no divine right in Lowell or Manchester to the exclusive manufacture of fabrics from the fibre we produce. If water power is essential to compete with Lowell, there is an abundance of it in Northern Alabama, speaking for this State alone, and steam will accomplish just as much in Mobile as in Manchester. Shall the man who raises the corn be absolutely dependent on his neighbor for bread. Shall we, with all the elements of physical strength around us, give to far off States the fine flour and be content to subsist on the husks ourselves? Every manufacturing institution established in the South is a rock in the wall of her defence. Every dollar spent in developing and expanding home enterprise is a seed sown that will have its fruition in the full ear. It seems that there was this one good effect resulting to the South from the war. It has taught us that a people cannot make themselves invulnerable by agriculture alone; that contingencies may arise when foreign industries can avail us nothing, or but little, and it has, as a consequence, turned the Southern mind towards a full development of its inherent strength, and the building up of a physical constitution that will make it as far as may be desirable, independent of external supports.

MANUFACTURES OF PAPER.

We gather the following very interesting as well as important facts from the "*Paper trade Reports*," relative to the kind of goods now made from paper, which if as reported will work an entire revolution in many kinds of our manufactures. This report will be interesting to Housekeepers and our Lady friends, as it will decrease the cost of crinoline.

The Japanese paper handkerchiefs are assuredly coming, if a cotemporary be right. The paper collar manufacture now has been extended to less prominent but more important garments of great strength and flexibility, which can be sewed with a machine, giving seams almost as strong as a woven fabric. The inventor has particularly applied it to the production of petticoats, which are either printed in imitation to the fashionable skirts of the day, or stamped out with open work of such beauty and delicacy as no amount of labor with scissors and needle could imitate. The marvel is that these really beautiful productions can be sold at retail at fifteen cents each! Imitation cretonnes and chintz for bed furniture are also made, a set costing at retail about $1,50. The felted material is so flexible that a curtain may be twisted into a rope and shaken out again, showing as little creasing as chintz similarly treated. There are also table cloths embossed with signs of great beauty. This felted paper may in the end have a serious influence on the production of the woven fabrics it is intended to displace. Imitation leather, impermeable to water, is likewise made of it, and produces a cheap and useful covering for furniture, and even serves for shoes.

PHOTOGRAPHS OF THE PLEIADES

Our fellow-citizen, Mr. Rutherford, has recently obtained some admirable photographs of the constellation of the Pleiades; and, by means of a very delicate micrometer, has been able to measure the arcs which separate the stars of this group. Compared with the results obtained by Bessel some years ago, an almost absolute coincidence was found, but an illustration of the triumphs of modern science is shown in the fact, that what required eleven years for the eminent German astronomer to ascertain was determined by an American in the course of the observations of a single night. From the fact that the relative distances of the stars of the constellation have not changed in the slightest degree during the last quarter of a century, it is inferred—as has already been insisted upon—that this group constitutes the centre around which our solar system revolves —*Harper's Monthly.*

HEAVY RAILROAD DAMAGES.

In the spring of 1865, a man named Jacobs was killed while crossing the track of the Louisville and Nashville railroad, near the line of Hardin county, Ky. Suit was brought by his father in the Hardin county court claiming $800,000 damages. An affidavit being filed that full justice could not be done, a change of venue was granted to Lawrence county. The case has just been concluded after occupying several days. The jury, after much deliberation, rendered a verdict for plaintiff giving the amount of damages at $150,000. The case will be carried to the Court of Appeals.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.
AXLE-GREASE

H&L

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H&L

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

GRAIN AND FLOUR MARKET.

San Francisco, April 22.

The Grain Market has been without much variation now for some length of time, now and then a little demand for export, but there is always grain enough to meet any demand that comes, and will be, to treble the amount that will possibly be demanded for it, will be seen by the arrivals, that many of our fertile grain regions are sending it in by the hundreds of tuns at a time.

There is yet a large amount of grain still on hand in the country, and in many places they hold in hopes of a turn in the weather here, or in Europe, or some event that will give a speculative start. But we think the day has gone by for any material rise—enough to pay for the "hold on" principle.

It will be noticed by our grain growers how readily every event is seized by "croakers"—the recent norther that has been blowing for many days, has been caught at to show a great loss by blasting our grain.—There is no doubt but what the cold north wind has affected some grain fields, but we beleive if a careful examination is made, there cannot be found a single grain field in our State that has been materially injured or checked in its growth, that was in a proper and healthy state.

Observation will show that the cold wind has affected grain that was back and spindling, planted on shallow soil, planted late and already beginning to dry up, and the wind has affected that grain, the same as a cold blast affects a poor sickly mortal whose life blood runs sluggishly, this is the reason the north wind affects some fields and not others—the one is healthy the other sickly, and careful observation will show this to be the case always.

Let any grain grower take a ride in the cars through Livermore Valley and they will see the poorest specimen of plowing and grain planting ever looked upon' and there the crops look bad. Such samples of farming are a disgrace to the name of farming.

The market for Barley and Oats is dull, little or no demand and prices nominal.

Potatoes have declined considerably, the amount coming in large.

Hay plenty, prices firm by reason of good market demand.

All other articles of produce comes in plentifully and a fair market.

Retail Prices in the Fruit Market.

The Fruit Market has not yet put on her "go to meeting dress" we are between days. Apples and Pears nearly done, Apples however will be with us all the year round. But of new fruits we have only Strawberries, and the late cold spell has kept them little back.

As we are near rain that will give them a start, then the warm sun will bring us abundance, and we can all revel on Strawberries and cream, and soon all other small fruits will be in abundance.

Strawberries come in plenty to day even, and some fine ones were sent to New York.

Retail Prices in the Vegetable Market.

Our Vegetable Market is now, and always will be well and abundantly supplied for our Market Gardners are a real working class, they work night and day. Our Market Gardners, nearly all who raise Garden stuff are the French, German, Italian, or Chinese who are indefatigable in their business, as these gardners will show to all who will go to the outside of our City and neighborhood and see. Their industry should shame many of our American farmers who never have a good article of Vegetables on their own tables.

A fine lot of Celery and Cauliflowers were sent to Sacramento, being superior to any raised in that region. They were shipped by Balleite and Co., of the Pacific Market.

FISH.

[H. S. Burr.]

Our Fish Market will always be a grand feature in our Markets, the great variety always to be had of both fresh and salt water fish, and added to these our Shell Fish, our Crabs and Craw Fish, aye and our Oysters too, give to our market of these articles a show that cannot be excelled.

Is it not so Mr. Burr? We know your stand however in the California Market will prove our words.

Salmon is now coming down from Sacramento, in large quantities and in splendid order, fit for any epicurian. Large lots are now being sent abroad, of our famed Salmon.

POULTRY AND GAME.

Poultry is very plenty, Spring chickens are nice and at prices reasonable. All the varieties of Poultry are now in good order and at fair rates. Game is lawfully shut out of the market, but we have enough of everything else that is good.

DAIRY—BUTTER, CHEESE, EGGS ETC.

The Dairy Market may be said to be rather quiet, prices are now lower for Butter, Cheese, and Eggs, than it has been for the year. As this Journal has said all this year, prices would never again reach the old rates, so now we have the evidence before us of the very low rate of Butter and Cheese and the abundance offered even at these low rates.

Our Dairymen must now adopt a better system of Dairying. By selling their cows, making more butter with less labor and cost and thus economize, and bring about better results, for competition from abroad, and at home, will be greater and more of it as prices recede.

WOOL, TALLOW, HIDES ETC.

The Wool Market can be said to be brisk, the clip comes in freely, in good order, and excellent in quality showing a better character of sheep in our flocks, the demand from abroad takes our clip away as fast as it is ready, the sales of the week being nearly three quarters of a million pounds, the combination of our Woolen Mills here, and the erection of several new manufactories this year, will soon make a greater "Home" demand.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of there interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR
PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES
FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates.

50 Packets choicest and best			$10 00
25	do	do	5 00
12	do	do	3 00
50 Packets Good Selected			6 00
25	do	do	3 00
12	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony. Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds.
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

OPIUM RAISING.

The first point to be considered in regard to this, as with all other crops is—will it pay? Mr B says: "It will pay, and pay well, if attended to rightly. I know that I can take an acre of land and get more money from it than from three acres in any other crop I ever saw. It is not an exhausting crop, but a good one to precede wheat. At $10 or even $8 a pound, it will pay better than corn or wheat. I am not afraid that many will raise poppies or that too much opium will be made. It is too small business to suit the mass of farmers. It is worse than a dairying requiring close attention to business. The man of small means, with a little land, and who is close, careful and plucky, will make it pay. A good boy or girl can attend to a quarter of an acre, and have over half a day to spare. The labor of weeding and hoeing is no more than for carrots or onions. It is 'small business,'—*i. e.*, full of minor details, the proper observance of which are necessary to success. Good, rich land is required, which should be pulverized and leveled as for an onion bed."

The above we clip from the New York *Agriculturist*, and herewith give from the highest authorities the history, culture, preparation and uses of opium. Many of these facts we have before published, but at the special request of many of our subscribers we have given the sketch again and more *in extenso*:

Papaver. Said by De Theis to have been so called from the Celtic pepe, which signifies pap, or the soft food given to children, in which the seeds were formerly boiled to make the infants sleep. Opium is derived from the Greek, juice; it is supposed to have been the Nepenthes of Homer. Rheas, the name of one of the species, is from the Greek, to flow or fall, in allusion to the quickly perishable nature of the flowers. The poppy produces a great quantity of milk, for which reason Cybele, the mother of the gods, is represented crowned with poppy heads as a symbol of fecundity.

The species of this genus are all showy, with large, brilliant but ephemeral flowers. They are all easy of culture in almost any soil and one species affords, that singular medicine, opium. *P. Rheas* is one of the commonest weeds among corn on gravelly soils; but in its double and semi-double cultivated varieties, it is also one of the handsomest of garden annuals. The capsules, as in *P. somniferum*, contain a milky juice of a narcotic quality: an extract from them has been successfully employed as a sedative; and some foreign practitioners are said to prefer this extract of opium.

P. somniferum, although it is found growing wild in the southern parts of Europe, and even in England, yet there is every reason for thinking that its seed must have been carried in those parts from Asia. It was very early cultivated in Greece, perhaps at first solely for the sake of its seed, which was used as food. It is extensively cultivated in most of the states of Europe in the present age, not only on account of the opium for which it is reared in Turkey, Persia, and India, but also on account of the capsules, and of the bland oil contained in the seeds. All the parts of the poppy contain a white, opaque, narcotic juice, but it abounds more in the capsules; hence these are the only official parts of the past, and for them chiefly is the plant cultivated in this country. They are gathered as they ripen, and as this happens at different times, there are usually three or four gatherings. They are brought to market in bags, each containing about 3000 capsules, and sold to the druggists. The London market is chiefly supplied from Mitcham in Surrey.

The milky juice of the poppy, in its more perfect state, which is the case in warm countries only, is extracted by incisions made to the capsules, and inspissated; and in this state, to use the phrase of commerce. The mode of obtaining it appears to have been nearly the same in the time of Dioscorides as it is at this day adopted. The plants, during their growth, are carefully watered and manured the watering being more profuse as the period of flowering approaches, and until the capsules are half grown, when it is discontinued, and the collection of the opium commences.

At sunset, longitudinal incisions are made upon each half-ripe capsule, passing from below upwards, and not penetrating to the internal cavity. The night dews favor the exudation of the juice, which is collected in the morning by women and children, who scrape it from off the wounds with a small iron scoop, and deposit the whole in an earthern pot, where it is worked by wooden spatules in the sunshine, until it attains a considerable degree of thickness. It is then formed by the hand into cakes, which are laid in east ern basins to be further exsiccated, when it is covered over with poppy or tobacco leaves. Such is the mode followed in India, and according to Kæmpfer's account, nearly the same is practised in Persia; and where the juice is drawn in a similar manner in this country and inspissated, it has all the characters of pure opium.

Opium is brought to this country in chests from Turkey and India. The Turkey opium is in flat pieces, covered with leaves. East Indian opium is in round masses, covered with the petals of the poppy in successive layers, to the thickness nearly of one-fourth of an inch. Mr. Kerr relates, that at Bahar, it is frequently adulterated with cow-dung, the extract of the poppy procured by boiling, and various other substances. In Malwa it is mixed with oil of sesamum, which is often one-half of the mass; ashes and the dried leaves of the plant are also used. It is also adulterated with the aqueous extracts of the capsules, the extract of *Chelidonium glaucum*, *Lactuca virosa*; and *Glycyrrhiza glabra*, and sometimes with gum arabic, tragacanth, aloes, and many other articles.

Poppy heads or capsules possess anodyne properties; they are chiefly employed, boiled in water, as fomentations to inflamed and ulcerated surfaces; and a syrup, prepared with the inspissated decoction, is used as an anodyne for children, and to allay the tickling cough in chronic catarrh and phthisis.

Opium operates as a powerful and very diffusible stimulus, but its primary operation is followed by narcotic and sedative effects in a degree much greater than could be expected from the previous excitement it induces. It acts directly on the nervous system, and when taken into the stomach destroys irritability, and allays pain in the most distant parts of the body, independent of the circulation, and without inducing any change on the composition of the blood. As the principle, therefore, on which opium acts is the same over all the body, the topical application of it is capable of producing similar effects, only in a diminished degree, to those resulting from it when it is taken into the stomach.

In moderate doses, opium increases the fulness the force, and the frequency of the pulse, augments the heat of the body, quickens respiration, and invigorates both the corporeal and mental functions, exhilarating even to intoxication; but by degrees these effects are succeeded by languor, by lassitude, and sleep; and in many instances headache, sickness, tremors, and other symptoms of debility such as follow the excessive use of ardent spirits, supervene. In very large doses the primary excitement is scarcely apparent, but the pulse seems to be at once diminished. Drowsiness and stupor immediately come on, and are followed by delirium, sighing, deep and stertorous breathing, cold sweats, convulsions, apoplexy, and death. The appearances on dissection are those which indicate the previous existence of violent inflammation of the stomach and bowels; but notwithstanding the symptoms of apoplexy which an overdose, when it proves fatal, occasions, no particular appearances of an inflammatory state or fulness of the vessels of the brain are perceived.

The Turks call opium *afioni*; and in the *teriakhane*, or opium shops of Constantinople, they take it in gradated doses from ten grains to one hundred grains in a day. It is mixed with rich syrup and the inspissated juices of fruit, to render it more palatable and less intoxicating; and is taken with a spoon, or made up into small lozenges stamped with the word, Mash Allah, literally, "The work of God." The Tartar couriers, who travel great distances, and with astonishing rapidity, take nothing else to support them during their journeys (*Dallaway's Constantinople*, quarto, 18.) There is, however, some reason for supposing that the Mash Allah, or Mastach of the Turks, contains other narcotics, as those of hemp and of tobacco, as well as opium.

The use of opium for the purpose of exhilarating the spirits has long been known in Turkey, Syria, and China; and of late years it has been unfortunately adopted by many, particularly females in this country. Russel says, that in Syria, when combined with spices and aromatics, he has known it taken to the amount of three drachms in twenty-four hours. Its habitual use cannot be too much reprobated. It impairs the digestive organs, consequently the vigor of the whole body, and destroys also gradually the mental energies. The effects of opium on those addicted to its use, says Russell, are at first obstinate costiveness, succeeded by distress and flatulence, with the loss of appetite and a sottish appearance. The memories of those who take it soon fail, they become prematurely old, and then sink into the grave, objects of scorn and pity. Mustapha Bhatsor, an opium eater in Smyrna, took daily three drachms of crude opium. The visible effect at the time, were the sparkling of his eyes, and great exhilaration of spirits. He found the desire of increasing his dose upon him. He seemed twenty years older than he really was; his complexion was very sallow, his legs small, his gums eaten away, and the teeth laid bare to their sockets. He could not rise without first swallowing half a drachm of opium. (*Phil. Trans.* xix. 299.)

When opium has been taken in an overdose, the first thing to be done for counteracting its bad effect, is the exhibition of a powerful emetic; and for this purpose sulphate of zinc, or sulphate of copper dissolved in water, should be immediately swallowed, and the vomiting kept up for a considerable time, and urged by irritation of the fauces. Large draughts of vinegar and water, or other acidulated fluids, should afterwards be frequently taken; and the powers of the habit supported by brandy, coffee, and cordials. The sufferer should be kept awake, and, if possible, in continued gentle motion. Currie recommends the effusion of warm water at 100 degrees or 103 degrees for removing the drowsiness. (*London Dispensatory*. 416.)

Medical men have of late sought to discover the sedative principle of opium, and have found it in the extractive, from which a crystallized salt called morphia is obtained. Some foreign physicians, and Mr Thomson, the author of the London Dispensatory, have found that a quarter of a grain of the acetate of morphia produces the most beneficial effects that can be expected from an anodyne, allaying pain, and procuring sleep without in any degree affecting the central functions. (*London Dispensatory*, 420.

A variety of *P. somniferum*, known as the black poppy, from the color of its seed, is cultivated for these to some extent; they are called maw seed, and generally stained of a light blue color.

P. Rhœas (*silletic, Fr.*) and also *somniferum* are cultivated in Flanders and Germany for their seeds, which are bruised for an oil used in cookery as a substitute for that of lives. In Poland and in some parts of Russia, the seeds are used as a seasoning to soups, gruels, and porrige.

Professor Martyn, in his editon of Miller's Dictionary, has collected a body of facts, which clearly prove that opium may be produced to any extent in Britain, and of equal quality to that produced from abroad; the value of labor in this country, however, does not admit of such a thing. We have seen samples of opium made in the south of England quite equal to that of foreign growth, but we understood that the labor of collecting it was greater than could be afforded for its market price.

EVER-BEARING STRAWBERRIES.

The Bush Alpines have always borne a succession of crops during the season, when planted in the northern shade of a fence, and well taken care of, watered, mulched, &c.

Some three or four years ago, the New Orleans *Picayune* announced that Mr. Henry Lawrence, a gentleman of that city, had succeeded in obtaining a seedling, called the "*Crescent Seedling*," which bore an abundance of large fruit for a continuous period of six or eight months or more, from March to December. We wrote to Mr. Lawrence, and his answer confirmed all the paper had stated; and he sent us in succession four or five different importations of plants of the Crescent Seedling, by the steamer and otherwise, until at last we succeeded in causing them to grow, and awaited their bearing season, when, alas! they only bore a moderate crop, and ceased bearing as early as any other variety on our ground; thus proving a failure, as far as perpetual bearing was concerned, under our *ordinary mode* of cultivation. The plant has extraordinary vigor, a rampant staminate, exceeding all varieties we have ever seen in multiplying its runners. The experiment convinced us that it was not the variety, so much as the cultivation, and soil and climate, which gave it its continual bearing properties. Some experiments since made with this variety, in soil so reduced as to be little else than course sand, favor this idea. Mr. Lawrence wrote me at the first, that he reduced his soil by three-fourths of pure river sand; and, although I reduced my garden-soil considerably, yet it remained still very much too rich for the Crescent Seedling to develop its perpetual properties. The various experiments, however, were by no means lost.

About this time, it was announced by the press that Charles A. Peabody, Esq., the horticultural editor of the *Soil of the South*, near Columbus, Georgia, had succeeded, by reducing the soil, and with plenty of water, in making two well-known northern varieties—the Large Early Scarlet, and Hovey's Seedling—develop perpetual bearing qualities under the hot summer's sun in Georgia, furnishing fruit in qualities, from March till January. If this was the case in Georgia and New Orleans, could we not hope, by similar means, to extend our strawberry season north, during the months of July, and August, into September? In October last, in an interview with Mr. Peabody, he gave it as his deliberate opinion that, by the process he detailed and pursued, we could easily have an abundance of fruit from our strawberry vines until frost came.

On the 20th December last, Mr Peabody took up a few plants in fruit from his garden, and placed them, with the soil attached, in a basket, and sent them by express to Messrs. J. M. Thorburn & Co., 15 John street, New York. On their arrival, on Christmas Day, they were well loaded with large, ripe, Hovey's and Early Scarlets, together with a large variety of green fruit, of all sizes, from that of a pea upwards to full grown berries. They remained on exhibition in their windows some two weeks, when they were politely handed to us, and we had them potted in a greenhouse, with soil composed mostly of sand. The plants all grew finely; in March they came into blossom, and in May into ripe fruit. The foliage was very small, but healthy. They continued in blossom and bearing during the months of May, June, and July, without sending out a single runner, and some of the plants at the present time (the 14th of August) are in blossom, and have not started a runner. On one of the pots which had no runners started, we placed a very little rich soil, and in a week the plants threw up vigorous runners, caused by the slight addition to the richness of the soil.

The inference we draw from all this is, that no variety is ever-bearing under our usual manner of treatment, but that most kinds may be so trained, that, with a soil reduced largely enough with sand, and only vegetable manures applied, and plenty of water, and mulching when needed, they will continue to produce fruit until the approach of frost. The whole tendency of our experiments in strawberries is in this direction. Professor Page has, in Washington City, it is stated, induced the Alice Maude to adopt the ever-bearing habit. E. P. Brooks, Esq., of Elmira, N. Y., had the Hautboys in bearing in the open garden in September and even in December, 1855.

Amateurs and others will do well to try the experiment on a small scale, until they perfectly succeed; and then the large price of a dollar or more per quart, which the markets of New York, Boston, Philadelphia will pay for such fruits in August, will amply repay for the production on a large scale. Learn well, by observation, all the habits and tendencies of the strawberry in this regard, and we think the thing can be easily accomplished.

Home Correspondence,

A FARMER'S LETTER

Minerva Glen, April 28th, 1870.

COL. WARREN—DEAR SIR:

When a fellow performs twelve hours hard work, and does the "chores" besides, his cramped hands are ilfy fitted for the delicate pen, and his fatigued body will hardly stimulate sufficient activity of brain to give lucidity and strength to his ideas, but then mental as well as physical action is necessary to keep us all in good tune and so if I should neglect other minor things the FARMER and its readers must not be forgotten. At present I shall exercise my mental proclivities on a letter to you about *wine*.

CULTIVATORS OF THE SOIL SHOULD WRITE.

Before I proceed let me say to your readers, that if any information herein given has been published before I am ignorant of the fact, and should this letter be beneficial to any one, the only reward I ask for my trouble is, that if any important knowledge of general utility to all who cultivat the soil, should be in their possession, that they will not selfishly hoard it in secret, but will give it freely through the columns of the FARMER, for I know it's worthy Editor will grant them liberal space for any useful hints that may in any way contribute to the welfare and prosperity of the State. Let cultivators throughout the State write out the results of their experiments in al that relates to agriculture and horticulture, and send them to Col. Warren for publication, and thus resolve themselves into a grand Farmer's Club, associate our ideas, and thus reduce our calling to a science in this State like the farmers of the East. Oh, you will say, how shall we who never wrote for a newspaper know how to do such a thing? Never you mind, say I, scratch your ideas down rough, and see how quick the magic pen of the editor will transform them into nice readable articles which no one need be ashamed of. What say you? readers of the FARMER?

WINE MAKING.

Now about the wine. That which I have lately tasted was made from that variety of grape known as the *Grey Duchis*. The grapes were grown and the wine was made on the top of a mountain 1300 feet above the level of the sea, (if I have been correctly informed of the altitude). If Longfellow had tasted that wine, he never could have said of the catawba grape.

"There grows no vine by the haunted Rhine,
By Danube or Guadalquiver,
On Island or Cape that bears such a grape
As grows by the beautiful river."

It is absolutely delicious. I have tasted most of the wines of the State, and in my opinion, and in the opinion of everybody else, who have tasted it, it excells them all. This wine was made last fall, in the ordinary way, but two things may throw some light on the cause of its surpassing excellance.

WINE CASKS AND WINE CELLARS.

The barrels are all redwood; the wood is prepared in the following manner: First, a tank is made with a capacity for 400 gallons, this is the "steaming tank." It is constructed with head and bottom. A hole is now cut in the centre of the top large enough to admit a man. The staves for barrels are now split from good timber, and the tank is filled chuck full of them, (standing up), the hole at the top is now closed, and a head of steam turned on through a small appertura at the bottom. They are steamed in this way for 24 hours; then they are taken out and made into barrels, when again the steam is let through the bung hole, and the barrels are vaporized until every particle of resin and color is driven out, and they are now ready for use.

The moment a barrel becomes empty when the wine is "racked off" or used, it is at once put through the steaming process, until every vintage of wine is gone out of it.

The cellar is an excavation in the mountain side, and I do not think the temperature will ever reach higher than 40°, it is so much like an ice house.

I believe that much injury has been done to the reputation of California wines by the custom of putting them in old whisky and brandy barrels, I think there will always be more or less alcohol in the pores and cracks, and these old barrels perhaps has an affinity for the spirits naturally in wine, and they unite, and thus the best wine in the world may be spoilt and the cause unsuspected. To make good wine, 1st, the grapes must be thoroughly ripe; 2d, the barrels new, well steamed and sweet; 3d, and the store-house should never be warmer than 50°, (this is for California.)

In my next I will speak of the desseases of the grape, here. Yours, A. K.

POTATOES mashed fine and mixed while hot with an equal bulk of corn meal is the best of all puddings for fattening chickens fast

INGRATITUDE.

EDITOR FARMER:

What baser quality in man than ingratitude, and what more common? How often have we read of those who have periled fortune and life itself to serve a friend who in turn had not the manliness to acknowledge the obligation. On the contrary they would seem to ignore and renounce their benefactor for no other reason than pure selfishness and an entire disregard to honor and justice. "I had a friend I gave him money and I lost him,' I had an enemy I gave him money and won him "somewhat mastely but true." Friendship is sometimes sold very cheap, but then like other low priced commodities, it is not worth much, we have known some whose friendship was scarcely worth a dollar, and others who would cheat the purchaser that gave them a kind thought. Yet we are buying and selling friends every day. A *true friend* cannot be *too dear*, but how are we to winnow the "wheat from the chaff?" If we loan a friend a dollar and he pays it, is the obligation cancelled? He borrows again and again, finally he increases the obligation and never pays. Is the sum lent his true value? So he seems to think, but we think it too much, perhaps we are well rid of such or he might have gotten more, thereby increasing his value in his own estimation, growing still more worthless in ours. Such men shun those to whom they are beholden as they would a pestilence, when it becomes necessary to pay or even to acknowledge a debt.

Every day of our lives we are compelled to turn away those who ask assistance not as charity, they would scorn to do that, but as a loan, an accommodation as they say for a short time, but we know it to be permanently invested when it goes into their hands, such people purchase goods and promise prompt payment but *never* do as they agree. We may distress ourselves for years to accommodate them and finally make them mortal enemies by insisting on our own. After goods are sold on express conditions that they are to be paid for promptly at date agreed upon, months roll on and sometimes years, until patience ceases to be a virtue, and we demand our rights to receive defiant curses, and possibly if so fortunate get in return for our gold and accommodation a depreciated currency and bitter enemies. Such cases are of daily occurrence, and one man's face is scarcely more fair than another that he should be trusted to the exclusion of all others; especially as all make the same promises, not one in ten of which keep them. Small accounts are allowed to run on by those, even that are abundantly able to pay, by and by the amount looks formidable, and they grumble and refuse to pay, until the tradesman afraid of losing a customer, is forced to compromise for what he can get, often with the loss of the customer as well as a loss on the bill. Such are some of the respectable men of society who have means and if compelled by law will pay what they owe, but who know the merchant would sooner lose a small account than go to such extremes.

The above are among the causes of hard times and general depression. Such little things assume great proportions, a single dollar set in motion will pay many debts and make many happy. But as long as such a general reticence is manifest so long will we complain of hard times, and the holding on to our dollar because some one else clings to his does not help the matter. Let a new order of things be started, pay as we go, pay promptly, and when Saturday night comes we shall know pretty nearly what we are worth, and often we shall, as a consequence, save where otherwise we might too easily part with what might prove to be our last dollar or possibly with that, that already belongs to some one else. Pay up, buy what you can pay for, and be as independent as a lord. Let us try it, what say you, Mr. Editor.

PHILMORE

[REPLY]

In Heaven's Dictionary the definition of *Ingratitude* is, "*The blackest of all crimes.*"

Our kind correspondent, "Philmore," it will be remembered wrote for our journal a short time ago two articles under the head of "Going round in a Wagon." We now surmise that he has been going round in the country among the storekeepers that so often complain of long-winded farmers, who hold on to their grain and keep many bills unpaid. Besides Philmore knows the city trade and business, and talks as if he knew some keen truths. We wonder if he was ever an Editor and Publisher of a newspaper, or looked over the long list of subscribers, if he has, he would find lots of *ungrateful* beings there, at least there are cases where the *tiniest bit of gratitude* would send in the dues to the publisher from a thousand sources, and this would make *better times*.

If our farmers, one and all, would adopt the "Pay as You go System" they would buy their goods 25 per cent. cheaper, and be much happier, where the prompt sale of their produce would enable them to do this easily, then how much more independent would that farmer be if he was out of debt. Even if he had a few head of stock less, a few hundred sacks of grain less on hand, or a smaller farm—all his work would be better and quicker done, and at less expence.

Pay as you go, would fill his heart with gratitude to God for his many blessings; fill his treasury with gold; make his family cheerful and happy, and leave him ample means to "Pay the Printer," who generally with the Minister, and Doctor, are the last and poorest paid—well Philmore, that's what we say!

Agriculture.

WHAT I KNOW OF FARMING

BY HORACE GREELEY.

ESSAY NUMBER SIXTEEN

My little, hilly, rocky farm teaches lessons of thoroughness which I would gladly impart to the boys of to-day who are destined to be the farmers of the last quarter of this century. I am sure they will find profit in farming better than their grandfathers did, and especially in putting their land into the best possible condition for effective tillage. There were stones in my fields varying in size from that of a brass kettle up to that of a hay cock—some of them raising their heads above the surface, others burrowing just below it—which had been plowed around and over perhaps a hundred times, till I went at them with team and bar, or (where necessary) with drill and blast, turned or blew them out, and hauled them away, so that they will interfere with cultivation nevermore. I insist that this is a profitable operation—that a field which will not pay for such clearing should be planted with trees and thrown out of cultivation conclusively. Dodging and skulking from rock to rock is hard upon team, plow, and plowman, and it can rarely pay. Land ribbed and spotted with fast rocks will pay if judiciously planted with Timber—possibly if well set in Fruit—but tilling it from year to year is a thankless task, and its owner may better work by the day for his neighbors than try to make his bread by such tillage.

So with fields soaked by springs or sodden with stagnant water. If you say you cannot afford to drain your wet land, I respond that you can still less afford to till it without draining. If your really cannot afford to fit it for cultivation, your next best course is to let it severely alone.

A poor man who has a rough, rugged, sterile farm, which he is unable to bring to its best possible condition at once, yet which he clings to and must live from, should resolve that, if life and health be spared him, he will reclaim one field each year until all that is not devoted to timber shall have been brought into high condition.—When his Summer harvest is over, and his Fall crops have received their last cultivation, there will generally be from one to two Autumn months which he can devote mainly to this work. Let him take hold of it with resolute purpose to improve every available hour, not by running over the largest possible area, but by dealing with one field so thoroughly that it will need no more during a long lifetime. If it has stone that the plow will reach, dig them out; if it needs draining, drain it so thoroughly that it may hereafter be plowed in Spring as soon as the frost leaves it; and now let soil and subsoil be so loosened and pulverized that roots may freely penetrate them to a depth of fifteen to twenty inches, finding nourishment all the way, with incitement to go further if ever failing moisture shall render this necessary. Drouth habitually shortens our Fall crops from ten to fifty per cent; it is sure to injure us more gravely as our forests are swept away by ax and fire; and, while much may be done to mitigate its ravages by enriching the soil so as to give your crops an early start, and a rank, luxuriant growth, the farmer's chief reliance must still be a depth of soil adequate to withstand weeks of the fiercest sunshine.

I have considered what is urged as to the choice of roots to run just beneath the surface, and it does not signify. Roots seek at once heat and moisture; if the moisture awaits them close to the surface, of course they mainly run there, because the heat is there greatest. If moisture fails there, they must descend to seek it, even at the cost of finding the heat inadequate—though heat increases and descends under the fervid suns which rob the surface of moisture. Make the soil rich and mellow ever so far down, and you need not fear that the roots will descend an inch lower than they should. They understand their businesses: it is your sagacity that may possibly prove deficient.

I suspect that the average farmer does far too little plowing—by which I mean, not that he plows too few acres, for he often plows too many, but that he should plow oftener as well as deeper and more thoroughly. I spent three or four of my boyish Summers planting and tilling Corn and Potatoes on fields broken up just before they were planted, never cross-plowed, and of course tough and intractable throughout the season. The yield of Corn was middling, considering the season; that of Potatoes more than middling; yet, if those fields had been well plowed in the previous Autumn, cross-plowed early in the Spring, and thoroughly harrowed just before planting time, I am confident that the yield would have been far greater, and the labor (save in harvesting) rather less—the cost of the Fall plowing being over balanced by the saving of half the time necessarily given to the planting and hoeing.

Fall Plowing has this recommendation—it lightens labor at the busier season, by transferring it to one of comparitive dullness. I may have said that I consider him a good farmer who knows how to make a rainy day equally effective with one that is dry and fair; and, in the same spirit, I count him my master in this art who can make a day's work in Autumn or Winter save a day's work in Spring or Summer. Show me a farmer who has no land plowed when May opens, and is just waking up to a consciousness that his fences need mending and his trees want trimming, and I will guess that the sheriff will be after him before May comes 'round again.

There is no superstition in the belief that land is (or may be) enriched by Fall Plowing. The Autumn gales are freighted with the more volatile elements of decaying vegetation. These, taken up wherever they are given off in excess, are wafted to and deposited in the soils best fitted for their reception. Regarded simply as a method of fertilizing, I do not say that Fall Plowing is the cheapest; I do say that any poor field, if well plowed in the Fall, will be in better heart the next Spring, for what wind and rain will meantime have deposited thereon. Frost, too, in any region where the ground freezes, and especially where it freezes and thaws repeatedly, plays an important and beneficent part in aerating and pulverizing a freshly plowed soil, especially one thrown up into ridges, so as to be most thoroughly exposed to the addition of the more volatile elements. The farmer who has a good team may profitably keep the plow running in Autumn until every rood that he means to till next season has been thoroughly pulverized.

In this section, our minute chequer-work of fences operates to instruct and impede Plowing.—Our predecessors wished to clear their fields, at least superficially, of the loose, troublesome bowlders of granite wherewith they were so thickly sown; they mistakenly fancied that they could lighten their own toil by sending their cattle to graze, browse and gnaw, wherever a crop was not actually on the ground; so they fenced their farms into patches of two or ten acres, and thought they had thereby increased their value! That was a sad miscalculation. Weeds, briars and bushes were sheltered and nourished by these walls; weasels, rats, and other destructive animals, found protection and impunity therein; a wide belt on either side was made useless or worse; while Plowing was rendered laborious, difficult and inefficient, by the necessity of turning after every few hundred steps. We are growing slowly wiser, and burying a part of these walls, or building them into concrete barns or other useful structures; but they are still far too plentiful and need to be dealt with more sternly. O squatter on a wide prairie, on the bleak Plains, or in a broad Pacific valley, where wood must be hauled for miles and loose stone are rarely visible, thank God for the benignant dispensation which has precluded you from half spoiling your farm by a multiplicity of obstructing, deforming fences, and so left its soil free and open to be everywhere permeated, by the renovating Plow!

APIARY FOR APRIL.

Light swarms should be fed regularly every evening in small quantities. Close inspection will be necessary to ascertain their precise condition. Be not deceived by the industry of the bees; many may be carrying pollen only—no honey. Look out for robbing on warm days. A little fighting does no harm, indeed it is a good sign when robbers are about. Contract the entrance and let them stand. The danger comes when the bees cease to defend themselves. Then is the time to help them. An easy way for a beginner is to move a hive that is in danger, a mile or two and leave it for several days, and then return it. Or it may be put in a dark cellar for the same time and fed. This month is as good a time as any to make arrangements for introducing Italian queens. Moveable combs are almost indispensable for the purpose. If syrup or strained honey is used for feeding, put it in a shallow dish, with cut straw or shavings, to keep bees from drowning, and put the dish on the top of the hive, and cover closely. Feeding steadily and freely, will pay, although the hive may have enough. Yet it will take much more honey to do so, as it will stimulate breeding. To stop after once commencing, increases the risk of starving. Avoid filling the combs that ought to contain brood instead of honey. Fruit blossoms often furnish a plentiful supply of honey, and quite often fail. We do not expect a full, continued supply until clover appears. We want (at the 10th of June in this section), the strongest possible force in every colony. The foundation for this must be established this month. Bee-keepers, in this State, never had a greater interest in promoting this than now. We wish to regain, what was lost the last season. If it is done, it will be with much labor. What are the means? 1st. Work. We cannot expect that folded hands will produce better results in bee-keeping, than in cultivating potatoes or corn.

A small colony of bees in July, with a good queen, will increase much more rapidly than in April. Because the bees can protect with animal heat much more brood, and increase nearly as fast as a large colony. If we can give the same temperature, in April, and feed, we shall have the same results. It has been recommended to provide a dark room, warmed artificially, and set the weaker stocks in every night, and every cold or rainy day, and feed them.—*Bee Journal for April.*

[In California our temperature in April is equal to the Eastern States in July, and we are so warm in winter that we do not need to carry hives into any building—we are always safe.—ED. F.]

A NEW WRINKLE FOR HORSE MEN.

It is said that after a horse is nine years old a wrinkle comes on the eyelid at the upper corner of the lower lid, and every year after he has a well-defined wrinkle in each year. If, for instance, a horse has three wrinkles, he is twelve; if four, he is thirteen. Add the number of wrinkles to nine, and you will always get it.

Will our horse men please try this *wrinkle* and report? If true, our horse dentist's occupation is gone.

Salmon has been in the market for some time and the cry goes up, "Let us have peas."

Miscellaneous.

STATEMENT
— OF THE —
CONDITION
— OF THE —
PACIFIC
INSURANCE COMPANY,
SAN FRANCISCO, CALIFORNIA.

FOR THE YEAR ENDING DECEMBER 31, 1869.

Capital Stock..... $1,000,000.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 14 per cent, Oil Cake Meal, 21 @ 30 per cent. For increasing and fattening properties to all stock are not to sudden changes of weather or over-driving it has no equal

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the chaff of bran, chop, roots, or cut feed of any kind. It is important to soak it for six or eight hours, the effect being to increase it bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other food and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and smoothness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on the coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

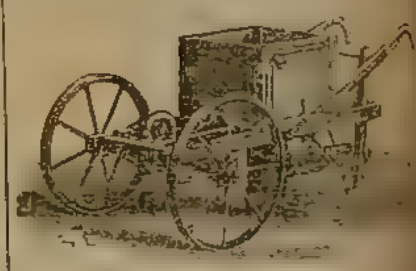
TRUE'S
IMPROVED
POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over ground that can be plowed

No intelligent farmer can fail to see that such an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value—because the days in which PLANTING can properly be done are very few, while he has all autumn and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office

THOSE WHO WISH TO RAISE TREES FOR THE *ORANGE PLANTATION,*
Can obtain SUPERIOR SEED at the FARMER OFFICE.

Horticulture.

SPLENDID FLOWERING PLANTS.

We take from the "*Queenslander*," a most excellent and very large newspaper, published at Brisbane, Australia, the following sketch of choice plants flowering there January 1st.

As we have successfully grown in California many plants from Australia, so all these very beautiful ones named can be as well grown as the others, who will take the pains to cultivate them in open ground? The *Poinciana regia* we saw in bloom at the Garden of the Female Seminary of Benecia, named in another column, and all the others can be well and beautifully grown here. The following is the sketch alluded to:

The *Poinciana regia* is now in flower in the Botanical Gardens, and to see this alone is worth a long walk. It is the handsomest tree in the gardens. Close to it is the talipot palm, also in flower. This plant is about fourteen years old, and when full grown, it is said, that a regiment of soldiers might stand under its foliage. The Jaca tree is also in this neighborhood. It is loaded with young fruit, as are also the mangoes. The *Lagerstræmia regina*, a tree of large growth, is just coming into bloom. The flower is a very delicate color, sometimes approaching the peach blossom, and in a short time it will look very beautiful. The white *Lagerstræmia indica* is also a sweetly pretty flower. It is at the corner of the walk near the river, and that which runs at right angles to the drinking fountain. The *Tecoma radicans*, is by the side of the river walk. The new *Bunias*, some of which are in fruit, is much admired by visitors. The *cycas* plants are very fine, and the Creeper *Clerodendron Thomsonii*, is very handsome. It is situated near Mr. Hill's residence, and is now a mass of bloom. The Strous plants and indigo are thriving well. The *Acacia lobeck*, near the aviary, is also in flower. It is a beautiful tree for shade, and the blossom has a very sweet perfume. The tea and coffee beds look very healthy, and a tree of the latter may occasionally be seen in blossom. The Indian Laburnum, yellow and white, are also in bloom and are particularly handsome. There are three varieties of *Allamanda* in flower, all of which are remarkable for their beauty. All the fountains are kept continually playing, and the purple and white water lilies are coming into flower. The Dahlias, Calladiums, and Gardenias look very handsome, and the small plots contain beautiful varieties of flowers. We would recommend visitors to Brisbane during the holidays not to forget to take a stroll through the gardens, and the enjoyment will be greatly enhanced if it can be done in the morning.

ADZE FOR FRUIT TREES.

"We have known quite a number of instances—indeed, so often as to make it quite a rule—that old orchards apparently dying out have been brought back again to fruitfulness by the liberal use of wood-ashes, also stirring the soil. Potash is the most important element in the successful growth of all kinds of trees. An old gentleman told a club not long ago, that he had known a man make and preserve an orchard of apple trees in a flourishing and productive condition, originally placed on very poor ground, by sprinkling every year around each tree to the circumference to the extent of its branches, half a bushel of ashes. We consider this a very important item."

The editor of the *Horticulturalist* tells this to his readers now. This has been long practiced to our knowledge. It is, as the editor says, a good practice, and the readers of the FARMER knows that we have for years urged this also. The washing fruit trees with Potash water destroys insects and gives the bark a lively and healthy look and action.

BOUND VOLUMES FARMER

Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco, Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and those cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING MAY, 5th., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER OFFICE are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Farm, lies of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of three rooms, Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are open file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair.

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our Journal, to which we would direct their *special* attention.]

OUR HOME DEPARTMENT.

All who love Home and its endearing associations should carefully read the most valuable sermon of Rev. Dr. Bolles of Boston, which we complete this week; it commenced in the last number—read it all. Those who love *Mother* and revere her memory will read with true feeling thy *one answer* in Home Department.

Vashti's Message, in Poet's Corner, will find response in many a loving heart. There are voices who will say with "Vashti" "I am his *slave*, my *life*, made all a splendid irony, for *wife*."

Our wine men should read the letter from "Minerva Glen," good ideas, a good plan, and good wine. We like the idea of Farmers writing to us, it is just what we should like; we will do our part and be grateful.

We hope our strawberry growers will carefully note the good experiment of growing strawberries on sandy soil, and carefully *try it*, also the system of mulching. It is really worthy a careful trial. We take it from Porden's Strawberry Book.

Farmers will find the "Greeley Essay" of this week of great practical importance to them.

New Books, Magazines, &c., notice in our next.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

MUSIC.

We have a copy of new music, The Saturday's Matinee, composed word and music, by T. G. Evans, Esq. Music Dictator, and dedicated to Miss Alice Zavitowsky. The cover has a very striking likeness of this beautiful lady, a "Card de Visite" is attached to it. Thanks for the copy *kindly sent us*.

PACIFIC MEDICAL AND SURGICAL JOURNAL.

The May number of this excellent journal comes this month improved and full of valuable matter. One article alone is worth five year's subscription to any family "*Mendacious Quacks*" has been so ably handled by the surgical knife of the Doctor, that blood flows freely, and the number of patients will be decreased speedily, for quackery will cease under such faithful handling. Good for the Doctor.

FRUIT GROWER'S CONVENTION.

A convention of Fruit Growers will assemble in our city at the District Court House on Saturday, at 1 o'clock P. M., to consult together upon the subject of the Fruit Interest of our State, and devise the best plans for the collection of choice fruits and its shipment to the Eastern States.

If there could possibly be a true union of the fruit men, so that all the growers, large and small should be benefitted *pro rata*, it would be a good thing; but it is too often the case that the *larger* consume the *smaller*, or some shrewd and sharp dealer has an "axe to grind," and the "cat is let out of the bag" somebody wants to *establish a business*—or by a combination or a society somebody wants a *Secretaryship*, and the good thing should have been done, is lost.

It is intended at this meeting to get up a petition to the Railroad Directors to see if the freights cannot be reduced, &c.

Concentration of interest, exchange of ideas will do no harm, but union of labor and effort and a generous and true union of interest, and a confidential co-operation can only accomplish any permanent good results.

THE SEASONS, CROPS ETC.

THE SEASONS.

These, as they change, Almighty Father, these,
Are but the Varied God. The rolling year
Is full of Thee. Forth in the pleasing Spring
Thy beauteous walks. Thy tenderness and love.
Wide flush the fields; the softening air is balm;
Echo the mountains round; the forest smiles;
And every Scene and every heart is joy.

What more beautiful, more truthful, and perfect picture could be painted of this season and of the glorious surroundings that meet us on every hand in this our favored State. And how every heart should leap forth with deep gratitude to God, as the words of the Heaven gifted Author of the Seasons thus speaks in his Hymn, at the close of that Series.

California is and will be fully appreciated now, by the thousands of highly gifted and intellectual travellers that are now with us, and those that will come to our State from other parts of our "Glorious Union," and also the great number that will come from Europe to visit, explore and enjoy the many natural beauties of our scenery, our Mountains, our Waterfalls, our Forests, etc.

CALIFORNIA WILL BE APPRECIATED.

The great blessing of this season is the abundance of our harvest. The glorious climate we live in has been so common a blessing to our masses that it is not fully appreciated by Californians, but new comers, those from the Ice and Snowy Winters of half a year, will appreciate California, and they by their descriptions of scenery, climate and crops, will be the Emigration Agents, that will build up our State, not by urging poor laborers and destitute families to come, but by teaching the great masses that this is no place for poor shiftless idlers to come. In fact it is the worst place in our Union for such, but they will show that Capital, Genious Talent, and Enterprise will all be duly appreciated, and that it is these combined with intelligent Families that are wanted.

Our Seasons, our Crops, and our Climate, is the prime motive power that will build up our State. With the rapidity with which citizens of our Union can now pass from State to State, it will not be two years before our State will have its population more than doubled.

The Seasons are now in their rapid strides to maturity, and however prosperous they are we shall always have the croakers crying out, Drought, North winds, scorching sun, or some cloud, but fortunately the cloud they see has a silver lining for others, and our Harvests are safe.

Haying has commenced in earnest, as we passed to Stockton on the Western Railway route, we enjoyed the fragrance of "New mown Hay," and was glad to see nearly all the Farmers curing their hay green, and not bleaching it, as has been too often the case. In this connection we would remind our readers that they can see at our office, the famous "Hay lifter" advertised in our columns it has been well tried here and certificates of its worth can be read at our office, where the implement will be shown.

Now is the time to save those crops of grain that were planted on shallow soil, now, cut them for hay, better than to let them dry out—we noticed several places where this was being done.

The contrast between deep and shallow tillage can be clearly proved by a trip over the Western Rail Road, by noticing the crops about San Leandro and that region, and further on at the passes through the Livermore Valley.

We noticed a fine field of Flax, of some 50 acres or more on that route and fields of Barley just heading, of superior quality.

SUMMER PRUNING.

Now is the time to go over the fruit trees and vines, and check the expenditure of strength by nipping of branches that are making too great and rapid growth. This will throw the strength of the tree or vine into the fruit, making the fruit richer and better, at the same time gives a firm growth to the bearing branches of tree or vine.

Thumb Pruning can now be easily done, a good eye will detect what branch of a fruit tree to check, and the grape vine should be stopped beyond its second or third cluster, while all superfluous young growth on the vine should be removed altogether. All the tendrils and useless branches that only take the sap, must be nipped off, the work will always pay well, by a largely increased crop.

Blackbery and Raspbery vines should be checked after the fruit is set and weak branches cut away to throw the strength to the bearing branches to secure a better crop and better fruit.

NEW FRUIT BOXES.

The new "Fruit Box" known as the "Fisher Fruit Crate" is certainly a great improvement upon all others. Those that desire to see this Crate can do so by calling at our office.

S. B. Davis, Esq., of Chicago, a gentlemen of large experience in the packing, shipping and sale of fruit, called on us and gave us all the points of this Crate, its use, &c. Mr. Davis will ship fruit in this crate and in several others. The object of Mr. D. will be to test them all and adopt the crate that is best

We are pleased with the business ideas and plans of Mr. Davis, and we commend him to our *Fruit Growers* as a *genuine* man of business to whom they can consign their fruit for sale in Chicago. Being a man of experience and responsibility too, so much superior to those who go into the business totally ignorant and inexperienced in the vicissitudes of this trade.

AUCTION BUSINESS.

We call attention to the card of Messrs. Somoer & Co., of Vallejo. They will promptly attend to the wants of the citizens of Solano County, in the auction business

BENECIA, HER COLLEGES ETC.

Benecia once upon a time was the Capital of California, and by some capital manœuvres the Capital was removed, and this we esteem the best thing that could have happened, for instead of its being the head quarters of Politicians, it has become the Head Quarters of Learning, and may now properly be styled the Athens of California. By the unfortunately slow progress made by the authorities of our State and the Regents of the University of California, it may be five years before that all important Institution will be in working order, and thus Oakland, that claims to be the Head Quarters, by reason of its nearness to San Francisco must at least for a season, yeild the palm to Benecia.

Benecia has three Colleges in full operation, with full classes. The Collegiate Institute for Young Men, formerly under C. J. Platt, Esq., but now under Rev. M. Breck, is in a prosperous condition, with a good corps of Teachers, and indeed doing well. The College Buildings have been greatly enlarged and improved—all testifying that it is in a very prosperous condition.

The St Catherine's College has also had large additions to its buildings, and spacious Gardens and grounds, adding much to its pleasant appearance. The number of Pupils is large, the College full, the Sisters are efficient and devoted to the cause of Education, making their College also very prosperous.

The Young Ladies College, the original College of the place, known as the Benecia Seminary for Young Ladies, for many years under the able management of Miss. Atkins, is now under the Proprietorship of Rev. C. T. Mills and Lady, and can be said to be one of the most prosperous Colleges for young Ladies, in our State.

Mr. Mills and Lady are truly devoted to their work, the Buildings have been greatly enlarged and improved, covering now an entire square, with spacious Gardens well filled with rare plants and flowers, all in most excellent order without. While the College rooms and Parlors always show a refined taste within, by the tastefully arranged flowers and Paintings over the buildings.

The Pupils at this College number 150, all but 30 are boarders, and a healthier, happier, or more intelligent and beautiful group could not be found in our Golden State. They are a richer treasure for our State than all her Gold and Silver Mines, for the Daughters of our State, well and truly educated are the true Pillars of the State.

This College employs fourteen Teachers, combining all the important branches of Education taught in the first class Colleges, embracing a complete English Education, the Languages, Music, Drawing, Painting, Embroideries etc., etc.—The Teachers love their Pupils, and the Pupils love their Teachers, and the glorious work of Education works like a charm, harmoniously and well.

We have seen the plan of the new College designed and in progress by Mr. Mills in Alameda County near San Leandro, it will be a noble as well as beautiful Institution. Of this we shall speak hereafter, the time we spent at this prosperous College with the Teachers and Pupils, is with us still, like a bright picture hung up in the chambers of memory, to remain forever bright.

THE PEAR TREE SLUG.

It will be remembered that last week we urged the attention of orchardist to their Pear Trees and Grape Vines, as it was about the time for the appearance of the "Pear Slug" on the trees, and the "Thrip" on the vines.

It will be seen by the annexed letter from one of our largest orchards and vineyards, that these enemies of both kinds, are at work. We annex the letter on the Pear Slug. A few days previous in a letter from the Doctor he writes:

"Do you know of any tried means to drive away the pestiferous White Grape Fly?"

ALHAMBRA, May 5, 1870.

COL. WARREN:

It may be interesting to some of your readers, so I give the following plan to destroy the Pear Grubs:

The season appears with an abundance of all noxious insects and vermin. Within a few days I found some of my pear trees infested with an army of caterpillars, of a kind not often observed before—they were hard at work munching the tender leaves, so I concluded to watch them, and succeeded by digging a narrow trench, six to eight inches deep within ten to twelve inches of the stem, using a part of the earth to form a cove around it; this I have covered with a couple of handfulls of fresh lime slacked with salt water, shaking each limb thoroughly I brought the enemy to the ground effectually. I soon found that the worms in trying to regain their position, found the trench "their last ditch," a few reaching the foot of the lime covered cave without being able to pass it. I hope by repeating the operation of shaking the trees for a few days morning and evening, the great majority will be cheaply and effectually destroyed.

Supposing that other orchards may be thus infested I will hasten to inform you of my proceedings, *pro bono publico*.

Yours, J. STRENZEL.

[REPLY.]

We can only repeat what we said last week—we use the *Gypsum* as there described for the "slug" and have faith also in Gypsum for the white fly (the "thrip.") In former years we always removed the thrip in "Graperies" and on the "trellis" by syringing with clean water. This we cannot do here on large vineyards except when the *hose* from water works are handy, this will drive them away—but we urge the Gypsum to be thrown on the foliage at early morn while moisture is on the leaves. It will always do good

Tax soon to be removed—tacks in carpets about moving day.

MEXICAN TROUBLES AND MEXICAN CLAIMS.

We recently met a Gentleman from the City of Mexico who has been a resident there for six years as a Merchant, but formerly a Californian—He gave us a sketch of the deplorable condition of things there, and says business is at a stand still, a constant warefare and trouble, that the whole country is split up into factions. Nothing seems safe, no business sure and marauding parties constantly trying the doctrine that "might makes Right."

This Gentleman comes from Mexico to attempt to secure claims, but being of French descent is obliged to send to France to get papers so as to identify and establish his right. We learn from him that many of the intelegent people of Mexico desire the protection of the United States, and he with others all feel that it is very certain that the mission of Mr. Seward to the City of Mexico, was ostensibly to see the condition of things, and thus be prepared for what is now inevitable, the annexation of Lower California to this State, and bring it under the dominion of the "Stars and Stripes"

The amount of claims now held against Mexico by the Citizens of the United States, is about $50,000,000. This probably will be the amount paid by our Government for the new Territory—a *swap* for that amount, and our Government to adjudicate all claims that our citizens have against Mexico.

A Commission is already at work to settle these amounts at Washington, they meet in June when all American Citizens must forward their claims, with proof that they are Americans, either born Citizens, or naturalized.

Mexicans have some claims against the United States, for spoliations during the war, and otherwise. These claims will then and there be adjusted also.

The following has been sent from the Department of State.

[OFFICIAL.]

DEPARTMENT OF STATE,
WASHINGTON, March 29, 1870.

The Joint Commission of the United States and Mexico, under convention of July 4, 1868, for the adjustment of claims, adjourned on the 31st day of January last until the first day of June next, and on the day of its adjournment made the following order, to wit:

"That the Secretaries are directed to receive all claims presented to this Commission during the adjournment, by either Government, noting the time of offering the same in each case; such claims to be held subject to the further order by the Commissioners, the question of extending the time for filing such claims being held under advisement, and not disposed of."

Under these circumstances this Department gives notice that it will continue to refer all claims against Mexico which may be received by it prior to the first of June next, to the Secretaries of said Commission, with the understanding that all claims received and so referred from the first day of April to the 31st of May, 1870, inclusive, will be held subject to the further order of the Commissioners under the discretionary power conferred on them by the third article of the aforesaid convention to extend the time for presenting claims beyond eight months from their first meeting.

In cases of claims presented after the 31st inst., to the Department of State to be thus referred to the said Secretaries of Commission, the Claimant should furnish affidavits or other proofs, showing adequate reasons for delay.

HAMILTON FISH, Sec. of State.

Now is the time to attend to this, and we learn also that it is not necessary for our citizens to go to Washington to do this, but to prepare these papers and call on C. A. McNulty Esq., in United States Court Block, opposite the Post Office, where all this can be done.

Mr. McNulty has more experience than any other party here in these matters, and with an able partner at Washington, this matter for our Citizens can be well and truly adjusted, and for the best interest of all who hold claims against Mexico.

GENERAL NEWS ITEMS.

STOCKTON.

From this rich Section, there comes about one-hundred tons of wheat daily, and the cry is "a little more left."

Large shipments of wool comes from Stockton also, to our City.

Some of the Best Flour sent abroad bears the brand of "City Mills, Stockton."

The Citizens are alive to the importance of Rail Road communication with the interior, and lately voted almost unanimously to make large grants of their Bonds to build the Road, which will speedily be put in operation.

Emigrants are coming to settle in the great San Joaquin Valley, in large numbers.

The City of Stockton is rapidly improving by the erection of Stores, Warehouses, and fine private Residences. Business is improving, money accumulating in their Savings Bank, which is a guarantee of better times. The streets, even to the suburbs, are all being graded and greately improved.

Stockton too, will have a Century Plant in bloom shortly, in the Court House Square—this will be worth a trip up there on the Western Rail Road to within its beauties.

The "Rip Van Winkle" sleep of Stockton is broken, and the sleepers now find that Stockton is indeed a live place.

The new Hotel, the "Yosemite," is a very fine Hotel, and will be well patronized.

A trip to this live place to-day gave us some items of importance for our next number.

Success to Stockton, say we.

"The shadow upon the wall"—Revels (the black Congressman) in the White House.

THE WOMAN QUESTION.

At the present time when so much is said and written on this subject—when "Woman Suffrage," "Polygamy," "Free Divorce," "Spiritualism" and "Free Love" has so many advocates for all these theories, it is all important for the salvation of our institutions that all the good doctrine that can be found should be scattered broadcast over the earth that it may grow and prosper.

To this end we published in our Home Department, last week, a portion of a most excellent sermon by Rev. Dr. Bolles of Boston, on "HOLY MATRIMONY," the conclusion we give this week.

We also here annex a most excellent article upon the "Claims of Female Labor," which was written by Elizabeth Peabody for "*Harper's Magazine for May*," on Industrial Schools for Women. We commend both these articles to our readers:

What are the duties and claims of women who are coming forward to fill their places in family and social life; and what are the institutions we want, to prepare them to do their duties; especially, what is the place among them for Industrial schools? For, certainly, the general reformation of industrial life in our day must also change home life, whose accustomed industry is of an antiquated type, machinery and manufactories having lifted the work of spinning and weaving from its pressure on single-handed strength. Even the ordinary laundry and needle-work is transferred to large public establishments; and in proportion, female labor *en masse* is not deemed as a commercial value in the market. It is not uncommon to see in our daily papers advertisements of our cities calling for a hundred or five hundred female laborers; calls answered all too quickly from the country by girls who know not to what they come. We all know how sadly this demand for female labor is influencing the working-woman's question every where by the many advertisements of work wanted, and the sad contrast of work and wages. Miss Marwedel says that a London dry goods merchant, wanting some thirty working women, was obliged to send away, not without the help of the police, seven hundred women who gathered around his door at 7 o'clock in the morning of a rainy November day! And the average number of governesses in London who apply for places every day is more than two thousand! It is mentioned in the London *Times* that a gentleman wanting a governess received five hundred and ten applications. Governesses in the work-houses of England are not uncommon. There is also ten times more governesses that pass their examinations in Prussia than are wanted. Yet there is another fact which, in this connection, it may seem hard to believe: In the very same places there is an unfulfilled demand for thoroughly skilled laborers of very many kinds. In undertaking to show why and how this is, Miss Marwedel says: "It used to be said in Germany that a girl leaving school at fourteen could support herself." But the influence of the home and school education is dependent on its keeping pace with the wants of the time; and the German schools, though they have adoped some improvements, have not done so. At the time the above-mentioned proverb arose all situations for girls of fourteen were supposed to be inside of families. But now, when girls are thrown into factories and shops, unguarded, on their own responsibility, the case is different. Physically feeble and half-developed, not fitted to act and think independently, unsupported by the requisite preliminary knowledge, they pass from the constraint of schoolrules to a personal freedom they do not know how to use. The necessary consequences are—all the moral evils to which our poor factory-girls and domestic servants are exposed; and which, we are too apt to say, are "the characteristic faults of our time," forgetting that we are responsible, by reason of our more commanding positions, for these same characteristics.

We are proud of our hospitals and alms-houses, of our reformatories and work-houses, of our asylums and regulated prisons, of our life insurances for the sick and for burial expenses. But all these things are for the middle and end of spoiled and and infirm lives. What a blessed change in our moral and social circumstances it would be if society and the state should take equally generous care to invigorate and preserve the accountanated healthy limbs of our youth, especially of our female youth, and to give moral ripeness to their characters! We are proud of our schools as models for other nations; but we take our children out of them when they have received less than nothing for the conduct of practical life, and most need examples and moral protection, neither strengthened in inner capacity nor outside practical ability, even when they have, what the majority never do have, a year of regular apprenticeship. What, necessarily, must be the lot of the working-women of to-day? Without any systematic instruction, in the majority of cases instead of being skilled in labor, in a hopeless mediocrity, their lot is the sorrowful one of working for any wages; and this is not all, for the better working power is drawn down by the iron law of demand and supply to the same starvation prices. This is not only true in Germany; the working-women of France, England, and America are suffering in the same way.

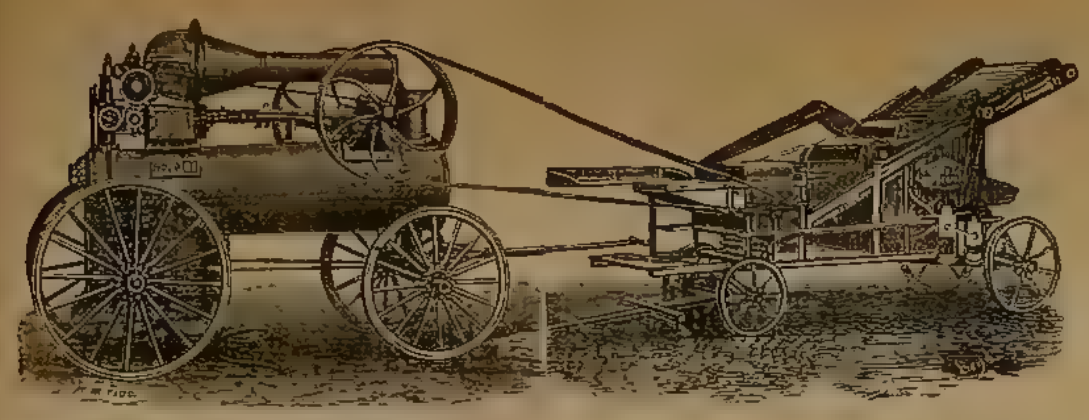
FEMALE FIENDS.

Father Buchard, the eminent Catholic lecturer says that our Woman Suffrage lecturers are "female Fiends;" that they should be shut up in Lunatic Asylums, and that the principles they advocate are destructive of our form of Government. Here is matter for the expounderess of Dashaway Hall to shriek at in good earnest.—*Exchange.*

If Father Buchard was so unwise as that to speak, we would most respectfully ask him if he will call the "Maggies" and "Bridgets" *fiends* when they are called on to vote?

The female prisoners in Iowa are enjoying woman's *right*. They have *left off breaking hearts* and taking to breaking stone.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,
320 Clay Street, San Francisco.

Young Man Wanted.

We want a smart and active young man from 12 to 16 years of age, to attend to our Reading Room and Museum, Mailing Papers, etc.

None need apply who cannot bring the best testimonials of character and ability. Must be a good penman and quick at figures.

To such a young man an opportunity of advancement will be given.

A young man whose parents or friends reside in the city would be preferred.

Apply at our office only between 4 and 6 P. M.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

Home Miscellany.

ONE ANSWER.

BY EDWARD A. BARNES.

What is ever pure and bright,
Filling home with happy light,
And which only death can blight?
A mother's love.

What is like a jewel rare,
Lovely, with a tender care,
And which you so freely share?
A mother's love.

What is ever deep and true,
Changeless as the other blue,
Giving all its wealth to you?
A mother's love.

What is that which speaketh cheer,
When your childish griefs appear,
Soothes your heart and checks your tear?
A mother's love.

Children, heed me, when I say,
And this mandate, too, obey,
Cherish sweetly while you may,
A mother's love.

While, 'mid earthly scenes you live,
Never by your actions grieve
That which only God can give,
A mother's love.

VASHTI'S MESSAGE.

"But the Queen Vashti refused to come at the King's commandment by his chamberlains."—Book of Esther, 1: 12.

Say to the King: I will not come, his Queen
That am not, and that never yet have been.

Say to the King: I will not stand again
A bauteous lie, among his princely men.

Say to the King: Cold pomp, and regal state,
And glittering servitude but mock my fate.

Say to the King: I am his slave, my life
Made all a splendid irony for wife.

Yet, say ye to the King: 'Twere sweet to wear
A sackcloth-gown, and kneel before him there.

Unscandaled, mean, amid that rich-robed throng,
Braving its wonder when I passed along.

So he would raise me with one true, pure kiss:
This were my wifehood, and my queenhood this!

[*Overland Monthly.*

GRANDCHILDREN.

Rev. Samuel Osgood, D. D., writes for *Harper's Magazine* thus eloquently and tenderly upon *Grandchildren*. All who are blessed with loving hearts will appreciate it fully:

Gather together, you great and goodly company, who are interested, in the grandchild in your own house, and let us help each to a better understanding of the meaning and the richness of this relation. We will not begin with the creation or the deluge, nor undertake to give a history of grandfathers and grandchildren since the days of Enoch; nor will we go into the philosophy of the parental love, that is the key to the whole matter. We know that we love our children, first of all, from a certain instinct, because they are ours; and we know that while with the lower animals this love ceases with the dependence of the young animal upon the parent for almost, with the human being the love deepens as the relation of parent and child is ripened and strengthened by growing sympathy and mutual service. Now this very affection that we have for our children does not rest in them alone, as they grow in years and knowledge and rise into youth and maturity. We still yearn for a little child to love, and there is a void in the house where there is none. Good Providence has benignly met this need of our nature by ordaining that when our children grow up their places shall be supplied, or rather truly filled, by children of theirs, and so the child is not set aside, but rather restored in the grandchild.

I do not exactly know how to analyze the kind of affection that is so ready to cling to a grandchild. We love that little fellow at once, without waiting for moralist or theologian to define the feeling or argue the duty. He is blood to our blood and bone to our bone, and in the form that most expresses dependence and wins protection. He is the child of our child, and we love him for our sake, for his mother's or father's sake, as well as for his own sake. We see in him not only himself, but the whole world of affection with which he is related. In that boy or girl in our daughter's arms we see as in a mirror the face of our daughter when she was in her mother's arms; and that mother's face smiles upon us with new grace, whether from the earthly home or from the heavenly mansion.

Then this child is nearer our hearts from being an interpreter of the plan of God for our human life. He shows to us how it is that God is ever educating us for himself, and calling us to live in flesh and undying affection by ever setting, like Jesus, a little child in the midst of us. If we have only our own children to love, the time will come when they will grow up and be full of new interest and cares that may come between them and our hearts. When these children of ours have children, their affections are softened, and their hearts are quickened towards us and ours towards them by this new attraction, that sends a child into the family not to be the rival of any, but the friend of all.

HOLY MATRIMONY.

This is the fifth and final discourse of the series delivered by Rev. James A. Bolles, D. D., Rector of the Church of the Advent, at that church, on successive Sunday evenings. This one was delivered on the evening of February 6th.

"This is a great mystery; but I speak concerning Christ, and the Church." Ep. v: 32.

(CONCLUDED FROM LAST WEEK.)

Who can doubt that the possession of such a home is one of the greatest of all blessings? I am sure, there is no father, having the thoughts and feelings and affections of who must not desire it for himself and his children. There is no mother, having a mother's undying love, who must not long for such a home that she and all that she holds dear may be sheltered in it and feel themselves secure. There is no son or daughter, or living man or woman, in whose heart the sentiments of the father and of the mother do not find a joyous response, and who have not all their lives long been yearning and panting for some such type of heaven and fountain of bliss.

But what is the foundation of such a home, underlying all others and without which it cannot be fully and perfectly realized? And what are the elements at work in our present social state for the destruction of all such homes? To these two questions let me direct your thoughts for a moment. I know not how it is possible for any human being to deny that husband and wife, parent and child, brother and sister, are the dearest, tenderest, the most sacred and the most important of all the relations of life. All other human ties may be weakened or trifled with, or even severed without any material injury to the welfare and happiness of man; but these cannot be rudely touched, much less broken without the most disastrous results, and results as lasting as the soul. But what are we doing? We are encouraging and countenancing an utter, an entire alienation from that only truth which can heal and soften and subdue and knit and bind our families together.—We think it no sin for the husband to be of one faith and the wife another; and the different members of the same family, instead of thinking and acting as the members of one body, to be thinking and acting as members of various bodies; as though Christ was divided and the church an apple of discord instead of a bond of union. Such is the actual state of society, fostered, encouraged and even justified by professing Christians. Such is an illustration of the horrible evils of sectism, as exhibited around us, rending first the church, then the family, and then sorely felt in all the departments and relations of life. Can this be right? Plainly not; for under the Old Testament dispensation, religion was hereditary and transmissive—the covenant of God included in its promises both parents and children, the family ties were bound together by the bonds of this religious covenant, and from that time to the present the Jews remain an eternal monument of that strengthening and cementing influence which their religious unity exerted upon all the domestic relations of life.—And so under the dispensation of the Gospel, I see not how it can be doubted that the Church of God as one body, and yet Catholic, was intended to act as a bond of union between families, and between different members of the same family, uniting them more closely together, making them more affectionate, more sympathetic and more happy in each other, and thus destroying those feuds and animosities which different religious sects and parties are calculated to produce. No matter what might be their various dispositions and temperaments and mental habits, yet in this "grand concern," the most momentous and the most lasting, the Almighty manifestly intended that they should have one common bond of union, sympathy, and love, never to be broken—"One Lord, one Faith, one Baptism."

Such was undoubtedly the design, and such must eventually be the result when all the various inventions and experiments of human reason shall be fully tried, and man shall come back from his wanderings, and God shall "turn the hearts of parents to their children and of children to their parents." Let us not be unwilling, then, to open our eyes to the actual condition of society, as existing around us and among ourselves, nor to confess our own sins as partakers of the guilt. Let us remember it is not in sectism, not in rending asunder, but in the Church of God, rightly understood that the blessings of a true Christian home can alone be secured. For it is only in the Church of God, and as members of the body of Christ, that parents and children can be the recipients of one and the same baptism, that they can be worshippers of one and the same Lord, that they can be confessors of one and the same faith—the same which was from the beginning, is now, and ever shall be,—that they can have their minds and hearts imbued with the same devotional thoughts, feelings, sentiments, and affections that they can have their souls changed into the same divine image, from glory to glory, and so a bond of union be established which no earthly disasters can possibly destroy, and which shall carry the line of religious identity from generation to generation. In the church, and as her faithful members, the father can live in his son, can leave one behind him that is like himself a member of the same indestructible body and endowed with the same indestructible virtues of truth, honor, duty and religion, and so fulfilling the words of the wise man, in describing the dutiful son, "Though his father die, yet he is as though he were not dead, for he hath left one behind him that is like himself; whilst he lived he rejoiced in him, and when he died he was not sorrowed."

"Bright as his manly sire, the son shall be,
In form and soul. But ah! more blest than he."

But there must be parental fidelity as well as filial obedience, and the one cannot be expected without the other. For if the father breaks the bond of union, then will it also be broken by the child; and if the father despises the church and her worship and sacraments, as a bond of union, then will they also be despised by the child, and thus the breaking of God's covenant will be sure to be followed sooner or later by the breaking of the covenant of man; and they who are not one with God in His household cannot long expect to be one with each other in the household of man.

Finally, to have a true Christian home, every father of a family must come to the resolution of Joshua, not as a mere resolution to be made to-day and broken to-morrow, but as an abiding principle of action—"As for me and my house we will serve the Lord."

You observe that Joshua does not meanly and cruelly divorce himself from his family and dependents, but like a man and a father, knowing and understanding his position and feeling its responsibilities, he goes before, sets an example, takes the lead, and nobly, bravely, and magnanimously says, "As for me and my house." But, you observe also, that he speaks not only for himself but for every member of his household, as one with them in an indissoluble union, and as feeling that in the worship of the only living and true God there must be no division, no separation, no divorce. But how is this? Has the father a right thus to speak, not only for himself but also for his children? Manifestly he has not only the right, but it is his bounden duty thus to speak, as realizing the solemn truth that they are one with himself—one tree expanded into several branches—one body of which he is the head and they are the members—and therefore as in human law he is responsible for them, much more must he be responsible in that law which is divine. Their destiny is in his hands. Awful power! Tremendous responsibility! No wonder that some parents deny it, and strive to banish it from their minds. But the effort is suicidal. God will hold them to it, and as well might they attempt to sunder themselves from their own consciousness of thought and action.

But what does this resolution mean—"As for me and my house we will serve the Lord"? All its meaning would require volumes to unfold.—Does it mean that he intended to use brute force to compel them to serve the Lord? Surely not, for that would fail, and drive them farther from Him. Does it mean that he intended to be cruel and morose, and supercilious, and fault-finding, and censorious? Surely not, for such conduct on the part of Christian parents has brought even the Christian household into contempt. Does it mean that he intended to abandon them to choose for themselves whether they would serve God or no? Impossible; for as well might he abandon them to choose their own father among men, as to choose their own God among gods. But in this resolution Joshua speaks as a father, as a friend, as a guide, as an instructor, as an exemplar, as the Priest in his own house, as knowing that his family are one with him, that he has already their sympathies, affections and hearts, and therefore that what he does, they will do cheerfully and gladly; and then he has faith in God, who has promised to bless the faithful use of all the means of grace. As, for instance, what does the husbandman mean when he says of yonder field that it shall be a field of wheat. He means to say that he will sow wheat, and though he depends upon the dew, the rain, and the sunshine of God's blessing, yet he knows that the seed sown decides the character of the harvest, and so the father knows the character of the harvest which he himself has sown or shall sow in the minds and hearts of his offspring.

I have now concluded the course of sermons which I proposed to deliver during the season of Epiphany, on the subject of Holy Matrimony. It was not my intention originally to make much reference to the strange vagaries which have been developed in the writings of some of our modern innovators, and especially in their recent movements in this city, all of which are alarming enough, and yet the food on which they live is controversy and excitement. I have not intended to give them much if any of that kind of food.—My object I hope has been a thousand times higher and more important.

As a Church clergyman I have long wanted for circulation some brief manual of instruction for Holy Matrimony, embracing the teachings of the Church and of her best divines, and containing those principles of eternal and unchangeable truth which must always live and flourish, in spite of all the oppositions and apostacies of poor, weak, fallen and deluded man. It has been my main object, therefore, as stated in my first sermon, to proclaim the voice of the Catholic Church in all ages. In the publication as a manual I can give names and references, and authorities, which it has been impossible for me to do in this place.

I thank you for the kind attention with which you have listened to me. I am very grateful for the many responses of sympathy which I have received, especially from the clergy in all parts of our country.

In conclusion I beg to implore you, with all imaginable earnestness and sincerity, as Christian men and women, never to abandon or surrender the citadel which alone can protect and defend your civilization from sinking into barbarism, and your liberty from the unbridled rage of lust and licentiousness. That citadel, that fortress, that last wall or rampart is the divine institution of marriage and the sanctity of family and of home, upon which all refined human society and all elevated human governments are found. The deluded and infatuated, and I must say in reference to some, the infernal underminers of these Divine institutions, may talk of freedom and equality, but there is no such thing as genuine freedom in violation of the commands of God, nothing but the veriest slavery, nor is there any such thing as equality without subordination to each other, in all the sacred relations of life, as we proclaim even in the Godhead "the glory equal, the majesty co-eternal," though there is not inferiority but subordination.

The unity of individualism and the liberality of sensualism and sentimentalism are only equalled in absurdity by the wildest ravings of bedlam. I beg you not be deceived by any of their multiplied artifices, even though they sometimes be clothed "as angels of light." As you would

"Strike—for your altars and your fires,
Strike for the green graves of your sires;
God, and your native land!"

so now I would implore you, in this age of rebuke and blasphemy, to "strike" for your fathers and mothers, your brothers and sisters, your sons and daughters, family and home. All are threatened, and all are in peril. The present movement, veiled under the different names of "moral reform," and "social reform," and "woman's rights"—all aim a deadly blow at Holy Matrimony, as ordained of God in Holy Scripture; nor can I imagine any movement, not excepting even the French revolution of A. D. 1793, which should awaken so deep a feeling of anxiety for the family and the home. But the triumph of infidel fanaticism in that eventful period in the history of the world, did not last long. An infamous courtesan in the garb of Liberty could not then be endured, even in France. There was too much of the solid substratum of Christianity to make it tolerable.—Much more must it be so now, and especially in New England; nor can there be any doubt as to the overwhelming tide of scorn and indignation, so soon as it shall be perceived that the object of our modern innovators is to destroy the Family and the Home.

God be praised!

"Around each pure domestic shrine
Bright flowers of Eden bloom and twine;
Our hearths are altars all;
The prayers of hungry saints and poor,
Like armed angels at the door,
Our unseen foes appal."

NEW
AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $3 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully illustrated.—Price.....$3 00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs.....Price $3 50

THE PARLOR GARDENER. A Treatise on in-door Plants. By Cornelia J. Randolph.....Price $1 00

In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

Miscellany.

RIGHT.

We clip from the *Carter's Real Estate Circular* the following articles which are sound doctrine:

JUSTICE TO MARRIED WOMEN.

We have more than once called attention to the injustice of the laws affecting the rights of married women. The last Legislature did itself credit by passing a law which does away with the worst features of past injustice on this subject. The new law exempts the earnings of the wife from the debts of her husband. Previously, when a woman was compelled to separate from a worthless husband, without bringing upon herself the discredit of a divorce, the husband could at any time subsequently sell or take possession of any property the wife might have acquired by her own exertions. This outrageous injustice is now done away with. Even where the husband did not attempt to interfere with the property of his wife, after their separation, the old law placed a most unjust restraint upon her, by refusing to recognize the validity of her deed to property, entirely acquired by her own exertions, unless the husband joined in signing it. The new law permits the wife to sell without the consent of her husband, after the hearing of the circumstances before a county judge. These are the kind of women's rights that we heartily approve of.

THE MERCANTILE LIBRARY AND ITS DEBTS.

The efforts made to free the Mercantile Library of debt have been most vigorous, but the belief is general that the load is too heavy to be removed. We think the managers of the Library ought to sell the property on Bush street, and with the proceeds clear off the debt, and purchase a half fifty-vara on Sutter, Post, Geary or O'Farrell streets, between Dupont and Powell streets. Land can be purchased in that locality for $300 to $400 per front foot—or $20,000 to $27,000 per half fifty-vara. The ground which the Library occupies is worth about $1,250 per front foot. The only difficulty would be in disposing of such a costly building, which is unfitted for business purposes. Still, if the property were offered for sale, we believe that buyers at a remunerative price could be found. The present location of the Library is even now not so central or desirable as the locality we have described.

[Most assuredly this should be done and at once. The great public supposed the "Uno Festival" would clear the debt and set the Library free. They, however, little dreamed that it was near $200,000, while the festival netted only some $20,000. Better sell at once and try and be free of debt.—Ed. F.]

ARTIFICIAL EBONY.

This substance is now being manufactured on a tolerably extensive scale. It is prepared, says a cotemporary, by taking sixty parts of sea-weed charcoal, obtained by treating the sea-weed for two hours in diluted sulphuric acid; then drying and grinding it and adding to it ten parts of liquid glue, five parts of gutta-percha, and two and a half parts of India rubber, the last two dissolved in naphtha; then adding ten parts of coal tar, five parts pulverized sulphur, two parts pulverized alum, and five parts of powdered rosin, and heating the mixture to about 300 deg. Fahrenheit.

We thus obtain, after the mass has become cold, a material which in color, hardness, and capability of taking a polish, is equal in every respect to ebony, and much cheaper.

Now, while this composition is in a fluid state, why not mould it into various forms for fine ornamental work, and thus save the labor of carving for furniture and other fancy work. Should this be done, however, probable the carvers might rise, and do as the *shrine-makers* of Ephesus did, cry out against this innovation.

GOOD JOKE.

While up the river a few days ago, says Harry Moss, in his *Mississippi Democrat*, we heard a rich one on some poor fellow whose name has escaped us. He was paddling to Vicksburg in a *dugout*, and had been informed of a certain locality called Ricks' Bend, which is eighteen miles around, and in one place about a hundred yards across. He was advised to land at the narrow point, and drag his craft over, but he passed the spot going down without observing it, and paddled on eighteen miles around, till he struck it on the other side. Landing at once, he dragged his boat across, and went gliding on down with a light heart, till he came to within a few paces of the same spot where he had dragged across before. Thinking it was a new cut-off, he went ashore and tugged his canoe over again. When he got back to the river a second time, he sauntered around a little to stretch himself, and soon discovered an old newspaper, out of which he had taken his breakfast soon that morning. It was now about sundown, and as he had paddled thirty-six miles without any very flattering progress, he scuttled his dugout with a hatchet, built a camp, and waited till next day for a steamboat.

Here's a lesson for many persons who never use their eyes. They always work to disadvantage through life.

A little girl in a Western town, after studying for some time a picture of the Magdalen reclining on her face and weeping, suddenly turned to her mother and exclaimed: "Mamma, I know why Mrs. Magdalen is crying. It is because Mr. Magdalen does not buy her clothes enough."

Mrs. Woodhull, one of the New York female lecturers announces herself a candidate for the next Presidency. Poob, poob! Madam; *wood-hulls* are out of date; it's an age of iron, (and *steel*.)

IMPORTANT

—TO—

Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L. AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the package.

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed.

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Edwin Farmer.]

GRAIN AND FLOUR MARKET.

San Francisco, May 5.

Our Grain Market shows a little animation, and some little advance in the price of choice parcels of Wheat. A little demand and shipment to Liverpool, has stimulated the Chinese demand, whence considerable Flour has been sent.

The advance in Liverpool for the past week has been 4d., but even this is more of a speculative than a permanent thing. It is indeed fortunate for holders here to have this demand, for it will help take away the surplus we have just on the end of our season when a very large harvest is beginning to manifest itself.

There can be no doubt of a very large harvest this year in spite of all the croakers of the land, for we shall have croakers always, the same as we have Fleas and Musquitoes, but their bite is not deadly.

The weather approaches the hot days when well cultivated grain fields will show well, and poorly plowed fields, and late sowed grain will burn up, for as the Scripture says, "when the Sun was up it withered away, because it had not much depth of earth." So with poorly cultivated grain fields.

Barley and Oats also are in demand, and sell freely.

Potatoes have declined largely—a large supply has touched the pockets of those who speculate in a perishable things.

Other produce comes in freely and finds ready market.

A. N. TOWNE, Gen'l Sup't.

T. H. GOODMAN, Gen'l Pass'r Agent. 32-20.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER"

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent per the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall with that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgements we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should include satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR
PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES
FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS
NEW ALSIKE CLOVER

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			5 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops,
Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best system of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

Farmers' Headquarters. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!! 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this Journal

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS.

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $3 each, thus giving them the two Splendid and Popular Pictures worth $6, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev HENRY WARD BEECHER, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $10,00.

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $6,50

The CALIFORNIA FARMER and the New York Weekly Tribune, $6,50

The CALIFORNIA FARMER and the American Agriculturist, $4,00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $3,00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $3,00

The CALIFORNIA FARMER and the American Stock Journal, $3,00

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed, and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for, six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers.

320 *Clay St.*, San Francisco.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS Institution will commence on THURSDAY August the 18th

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of ten months, ...$

FRENCH CHEESE.

[We herewith give a sketch of the manufacture of French Cheese; and those who are fond of the famous "Roquefort" Cheese (now to be had at "Bowen Brothers," Grocers on Pine street in this city,) will see of what materials it is made, and how it is really the true "Epicurean" cheese and the best made in Europe.—ED. FARMER.]

The *Dictionnaire General des Sciences Theoriques et Appliques*, by Privat-Deschanel and Ad. Focillon, contains the following article on French cheese: The cheese manufactured in the old province of Bresse, how the Department of the Ain, is made by boiling the milk, adding a little saltpetre, taking it off the fire, and putting in the rennet immediately. The curd is then dried in a cloth, pressed for a few hours, put into a cellar, and salted five or six days after—this latter operation being continued for a month. Auvergne or Cantal cheese is made without boiling the milk, but curdling it while fresh from the cow; the whey being then separated, a man, with his legs bare up to the thighs, gets upon the table on which the curds have been put in a tub pierced with holes, and kneads the paste thoroughly with his arms and legs, an operation which lasts about an hour and a half. The uniform mass thus obtained is left to ferment for forty-eight hours, and then salted, put into molds, and pressed for twenty four hours; after which the cheeses are put into a cellar, frequently looked after, and rubbed with a cloth dipped in fresh water. The celebrated Roquefort cheese, made in the village of that name in the Aveyron, is obtained with a mixture of Sheep's and goats' milk: but even in the milking there is a secret, for when the udder appears to yield no more, the maid strikes it repeatedly with the back of her hand, whereby a little more milk is obtained, much richer in butter. This operation, which is utterly harmless, causes the udder to increase in size in course of time. The next reason assigned for the peculiar flavor of Roquefort cheese, is, that when made into cakes, it is kept in caverns hollowed out in a calcareous kind of rock which skirts the village; the temperature of these recesses is always kept low by various contrivances, and seldom rises above 5° centigr. The cheese is made with the milk of the morning and of the evening before; the other manipulations present no peculiarity; but as for the veins, or *persille*, as they are called, they are obtained by mixing crumbs of moldy bread with the curds. The quantity of this cheese annually supplied to the trade is 900,000 kilogr. (of two pounds each.) Fromage de Brie is chiefly manufactured in the departments of Seine et-Oise and Seine et-Marne, to the amount of 2 500,000 kilogr. per annum. Rennet is put into the milk warm from the udder; the curds are made into cakes, and laid on wicker trays, so that the whey may run off. After twenty-four hours they are salted, and then turned and shifted from time to time for the space of a fortnight or three weeks.

AGRICULTURAL IMPLEMENTS.

The sale of Harvesting Implements is being largely increased every year. The sale now is large, every day some of our new dealers are busy shipping Harvesters to every part of the State and over the entire coast.

Our Farmers will always find the very best advertised in our columns. We never advertise any but the best. See notice in another place.

EATING AT A LUNCHEON BAR

There are some persons who enter a luncheon bar with a knowingness and a deliberation which indicate that they are about to lay out the limited space of time available for the luncheon bar to the greatest possible advantage. They select the best bar, and at the best bar they select the best things. With a cool, critical eye they run down the bill of fare, and with instinctive judgement make a selection which reflects credit on their taste. But if a man is exceedingly busy, or very much occupied in mind, he has no time for this.—He has perhaps staid at his post until faintness, or the gnawing tooth of hunger, has absolutely driven him from his work to the luncheon bar; and thus he has a wandering eye and a preoccupied air.—He has not the slightest idea what he is eating, whether roast or boiled, joint or *entree*. He satisfies a brute, canine instinct, and retires. Such a man has been known to come to a luncheon bar with a pen behind his ear. Such a one always brings a note-book, some memoranda, or a pocketful of letters with him. Such a one has a business friend with him; and they will continue their discussion or negotiation in the brief allotment of time apportioned to reflection. They are probably lean, unwholesome looking men, with bodily disorganization of some sort setting in, chiefly because they bolt their food whole, and allow no time for digestion. I know of an invalid of this sort, who, in solemn repentance for his ill-advised alacrity in feeding, has stuck up all over his house inscriptions in large letters, "Masticate, masticate, masticate!" A judicious man, who knows that he has a great deal of important work to do, and wishes to do it in a high state of bodily efficiency, generally confines himself to a mutton chop and a glass of sherry, which he transacts leisurely. If there is head-work, really requiring attention, a man is very careful in his diet. You can not be loading two great organs with work at the same time without impeding and impairing their action. This is a most elementary physiological truth.

EATING TO LIVE, OR LIVING TO EAT.

The above picture which we have given from one of our exchanges, is a true one, and such as is witnessed at all our Public as well as in our private Social life. Business, business, business, hurry, hurry, hurry, even while nature claims only a little quiet respite from both these enemies of health, while the body is refreshed and fitted for its round of duties.

The Picture which we give will be familiar to all, and it reminds us of a case we once witnessed at a Public Hotel.

A large stout heavy built, as well as a coarse featured man came and sat down on the opposite side of the table,—the waiter as is the custom, came to him and repeated over hurriedly the different dishes the Hotel had prepared. Beef, Mutton, Pork, Ham, etc., etc., when the man throwing up his brawny arms saying, hush! hush! shut up—then said loudly.

"Bring me something to fill up."

Here is a clear illustration of the article we have quoted, this man like thousands of others never dreamed that the articles he ate, and the manner he ate them were means to restore the wasted powers of the body, the flesh, blood, bone, sinew, muscle, fine tissues etc., etc. He and they only feel that they "have a vacuum," and as a nature they now abhore a vacuum, they say.—"Bring me something to fill up."

We have told our story just as it occured—we often meet persons who act out these words, and we now ask of some of our good Medical men, or any of our readers to send us an Essay upon the subject.

Give the stomach, something to fill up, and what it shall be, and how and when placed there. Shall we live to Eat, or Eat to Live?

NO DIVORCE IN MORMONDOM.

Hear what the Salt Lake City woman say for themselves. The correspondent of the New York *World* thus writes:

Not one here believes that any respectable man will put away his family. The people will sooner consent to be sacrificed together than to break up and scatter their families. Did the women want to be separated from tyrant lords, the matter would be easily reached; but the trouble is they don't want to leave them. Within the past two months no less than 12,000 feminine names of maids and matrons have been subscribed to petitions against the Cullom bill, declaring, in many cases, that they would sooner go to the penitentiary with their husbands than to be separated from them. There is nothing surprising in all this, unnatural as it may seem to others. To them Mormonism is true, and the revelation of polygamy is divine. The people have been preached to and taught in this manner till their heads are full of it. How is it that the Gentiles believe otherwise? Simply because their education has been of another stripe. The people of Utah need a flood of literature, and not an army with bayonets.

THE EXTRAVAGANCE OF THE AMERICAN PEOPLE

It is often commented upon in England and in France. In the luxuries of living I am satisfied no people surpass the masses of the United States, and there can be no question but that this often runs into prodigality in the use of money. In the higher circles and among the nobility of the old world there is every enjoyment which wealth can purchase, but the great middle class and the poor do not compare with our own in the elegancies and comforts of life. Probably no nation so generally wears costly silks, satins and other fabrics to the extent which is seen in the United States; and a Kidderminster Carpet manufacturer recently stated to the writer that America used more valuable articles in that branch of trade than any other people, and the most extensive orders for pattern carpets, woven to fit rooms, were from that country. He also stated that New York surpassed all other American markets in the demand for these expensive fabrics. In America a family is considered poor indeed which has no carpet on the floor, and most of your readers would have been impressed with the difference if they had walked with me a few days since through the streets of Kidderminster and looked into the rooms of the poorer people, whose doors open on a level with the streets into the apartments where they live. Most of these almost under the shadow of the great factories from which our people get their carpets, were not only uncarpeted, but the floors were of brick or tile, which had been used for scores or hundreds of years. One shudders at the sight of such homes, and wonders that the inmates are not chilled to death in the cold, damp winter. Most of the floors of the cathedrals and churches are of the same material, and bespeak but little of the comfort and neatness of the better class of churches in the United States.—*N. Y. Economist.*

THE SILKWORMS.

The eggs of silkworms are imported into the silk-growing countries of Europe in fabulous quantities, and are now almost everywhere the exclusive supply. The value of the eggs imported into the town of Genoa alone last year, is stated to have been about five and a half millions of dollars. A remarkable fact seems to have created the necessity of this importation, which is of of course an unusual thing. A sort of epidemic, or blight, like the potato rot, the wasting of the button-wood tree, and the diseases which have annihilated some of our fruits, has for several years infested the eggs of the silkworm, and has spread so widely as to leave untouched only two countries, Australia and Japan. The epidemic first appeared in the silk producing districts of France. It was observed that the worms did not feed with their usual avidity, and that their skins grew dark: but they worked on and fulfilled their destiny as usual. The silk produced, however, was thin and weak, and the progeny of the worms inherited the infection, and were marked with plague-spots that looked like pepper dust. The disease increased and spread through France and into Italy, and finally reached Persia and the Russian provinces beyond the Caucasus; and even India and some parts of China have felt the effects of the blight.

Every means which science or experience could suggest has been tried in vain to arrest the infection. At last a way has been found to carry the grains or eggs of worms from Japan to Europe in good condition. They are glued to a sheet of stiff paper, which is fitted into a slide in a shallow box, and thus transported across the American continent to Marseilles or Genoa. From the enormous amount paid for eggs in Genoa, as stated above, some idea may be formed of the extent to which the Japanese have profited by this singular epidemic. How long Japan will remain untested, to enjoy this monopoly, is a problem which involves serious consequences to silk producers and weavers.

NEW UMBRELLA CHAIR

An ingenious invention has been patented, we learn from the N.Y. *Scientific Review*, by Mr. Gillespie Sweeney, of New York, which relates to an improved seat, walking cane, and umbrella, combined together in one article, and an arrangement capable of adjustment for use in the capacity of either one of said articles, and consists of a sheath answering for the cane, divided into three parts, and inclosing in one part the umbrella from the point below the end of the ribs when folded; the stock is enlarged at this point and provided with ribs, braces, and a web of canvass stitched across the ends of the ribs, which spread out similarly in some respects to the umbrella, and form a seat when the top is placed on the ground; this latter part is enclosed within the part of the sheath forming the handle, which is divided longitudinally from the top down, and hinging to the aforesaid enlargement of the stock. These two parts fasten together with a strong cord.

Eggnacting things—chickens just hatched.

NEWS FROM THE COUNTRY.

SANTA CRUZ

The Santa Cruz *Sentinel* of May 7th, says:

MAGNIFICENT TROUT.

Our fellow townsmen, Roberts and Jones, made an excursion last Thursday afternoon to "Starvation gulch," and caught a splendid string of trout. Four of them weighed eleven pounds. We are somewhat in doubt as to the name of the gulch. That is probably a blind but the trout were the finest we have seen this season. P. McPherson and W. J. Hinds, caught 210 of the speckled beauties in a few hours fishing. Our mountain streams are full of trout, anxiously waiting for you to come and catch them for your breakfast. Go to Bowman's for your out-fit, and then start out for a good day's fishing.

THISTLES

We are glad to see that a number of our citizens are destroying the thistles on their premises. They are a nuisance and pest, and should be exterminated. It is stated that a petition will be presented to the Town Trustees asking their destruction by an officer, and the cost of the labor to be assessed to the property-holders upon whose premises they are found.

[This is right, every farmer that allows thistles to grow upon his territories or on the highways connected with his land, should have them removed at the order of the authorities and be made to pay double the cost.—ED. FARMER.]

FIRE.

Last Sunday morning the straw sheds belonging to the Paper Mills, located a short distance above this town on the San Lorenzo river, with their contents, were totally destroyed by fire. Whether the fire was accidental or the work of an incendiary, is the matter of grave doubt.

The report of the loss of 250 feet of Waddell & Co.'s wharf, was somewhat exaggerated. 160 feet is the amount.

New potatoes as big as your fists, are in the market.

There is springing up a lively demand for real estate in this vicinity.

MARYSVILLE.

The Marysville *Appeal* of the 10th, says:

FREIGHT ARRIVED, BUSINESS SIGNS.

Thirty-three loaded cars arrived on yesterday morning's (C. & O R. R.) train, consisting of 21 flat cars, with construction material, &c., and 12 box cars, loaded with Eastern and San Francisco merchandise, besides a quantity of provisions for men employed on the various construction outfits.

DEPARTURES.

A large number of Marysvillians left per Express train (C. & O. R. R.) yesterday morning for Stockton, to attend the races; also a number for Reno, en route to Virginia City, Nev. The total passenger traffic yesterday comprised 66 arrivals and 56 departures.

CATTLE DYING

The effect of the intense heat of the past few days, upon cattle, has been terrible. On the line of the Vallejo road yesterday we noticed the bodies of two cows, which must have died on Sunday. They had reached the ditch by the side of the railroad, and, from their swollen appearance, had evidently drank immoderately of water, which caused their death.

Travel by the Vallejo route appears to be on the increase, judging from the large number of down passengers yesterday afternoon. Mr. McCausland shipped ten cars of fine beef cattle by that route yesterday morning for the San Francisco market.

Miss Lillie Frisbie is the honorary member of the Fristie Guard, and appeared in uniform at their recent parade in Vallejo.

CHICO.

The Butte county *Record*, of May 7th, says:

THE LOCHER STEAM PLOW.

After an absence of nearly a year, the Locher Steam Plow made its appearance in town again on Tuesday evening. Their new machine is about ready to be put together, and the original one is to be dismounted, and the engine placed upon the new one. We understand that they experimented sufficiently with the old one before bringing it back to town to feel warranted in saying their new and improved one will work satisfactory.

The Northern California Railroad has been running daily trains between Oroville and Marysville for six years, and have never killed a single person. No other road in California can say the same.

Travel and business has not opened in this section for many a season with more life and activity than it has the present Spring.

ALSIKE CLOVER—LAWN GRASS.

This valuable Clover so highly esteemed abroad can be had at our Office.

Also English Lawn Grasses of best kinds at FARMER OFFICE

GOUGH'S APOSTROPHE OF WATER.

The following most eloquent "Apostrophe to Water," by the distinguished advocate of Temperance, John B. Gough, will be read with deep interest. It is indeed a consecutive burst of beautiful thrilling and truthful passages such as can rarely be found in so short a sentence, and in so few words. These words should be preserved as a rare specimen of eloquent descriptive Poetic truths:

"Look at this, ye sons of earth! Behold it! See its purity! It is a beverage that was brewed by the hands of the Almighty Himself! Not in a simmering still of smoking fires, choked with poisonous gasses, and surrounded by the stench of sickening odors and rank corruption, does our Father in heaven prepare the precious essence of life, the pure cold water, but in the green glades and glassy dell, where the deer wanders and the child loves to play; where God brews it, and down in the deep valley, where the fountains murmur and the rills sing, and high upon all the mountain tops, where the storm clouds brood, and the thunders crash, and away far out on the wide sea, where the hurricane bowls music and the big waves roll, the chorus sweeping the march of God; There he brews it—that beverage of health-giving water. And everywhere it is a thing of beauty; glimmering in the summer rain, shining in the ice gem, till the trees all seemed turned into living jewels; spreading a golden veil over the setting sun, or in white gauze around the midnight moon; sporting in the cataract sleeping in the glaciers, dancing in the hail showers; folding its soft curtain softly around the windy world, and weaving the many-colored iris—whose warp is in the rain drops of the earth—whose woof is the sunbeams of heaven; all checkered over with celestial flowers by the mystic hand of reflection, still always it is beautiful—that blessed life water! No poison bubbles on the brink; its foam brings no sadness or murder."

COATES BROTHERS' WOOL CIRCULAR.

PHILADELPHIA, May 1st, 1870.

During the past month trade has continued dull and there has been little change to note since our last issue. The old clip has come to market and almost all been consumed, little now remaining in hands of dealers and but very light stocks in factories. Trade for manufactured goods has been very dull and manufacturers have had to run to little or no profit, and often with a large accumulation of their products; all of which causes have made them pursue a very cautious policy in buying, and had the effect of stopping some mills entirely, while others have run on short time.—With the quiet feeling in dry goods, wool has been in limited demand, and the small quantity in dealers' hands has been sufficient to meet the wants of consumers; and will probably do so until the new clip comes in, unless there should be some stir in the goods market; in which case there will be but little desirable wool in market before the latter part of June as in the wool sections shearing ordinarily takes place from the first to the middle of that month.

The sales for the month, of Domestic Fleece, Tub-washed and Pulled Wools, foot up about 1 030 400 pounds, within the range of 43 to 53 for Fleece, 43 to 58 for Tub-washed, and 35 to 43 for Pulled.

TUB-WASHED

COATES BROTHERS,

Nos. 127 and 129 Market St.

TO CORRESPONDENTS.

THE TRUE NAME

We frequently receive letters of enquiry, also of suggestions—often letters containing criticisms of writers in our Journal, from persons who are entire strangers to us, letters often personal in their expressions and criticisms. Such letters we cannot publish or reply to—such go into the waste bag. Writers should give us their full names and residence, so that we may know all is right—their names will not be used against their wish, yet we must know the writer, else we shall not publish them.

There are 3,000,000 acres devoted to turnips each year in England. They are fed to cattle—sensible Englishman.

The cranberry crop at Hardwich, Mass., amounted during the past year, to 33,761 barrels, which were sold for $39,690.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER SEVENTEEN.

COMMERCIAL FERTILIZERS—GYPSUM.

Prices vary so widely in different localities that no fertilizer can be pronounced everywhere cheapest or best worth buying; and yet I doubt that there is a rood of our country's surface in fit condition to be cultivated to which Gypsum (Plaster of Paris) might not be applied with profit. Where it costs $10 or over per ton, I would apply it sparingly—say, one bushel per acre—while I judge three bushels per acre none too much in regions where it may be bought much cheaper. Even the poor man who has but one cow should buy a barrel of it, and dust his stable therewith after cleaning it each day. He who has a stock of cattle should never be without it, and should freely use it, alike in stable and yard, to keep down the foul some odors, and thus retain the volatile elements of the manure. Every meadow, every pasture, should be sown with it at least triennially; where it is abundant and cheap, as in Central New York, I would supply it each year, unless careful observation should satisfy me that it no longer subserved a good purpose.

As to time of application, while I judge any season will do, my present impression is that it will do most good if applied when the Summer is hottest and the ground dryest. If, for instance, you close your haying in mid-Summer, having been hurried by the rapid ripening of the grass, and find your meadows baked and cracked by the intense heat I reckon that you may proceed to dust your meadows with Gypsum with a moral certainty that none of it will be wasted. So if your Corn and other Fall crops are suffering from and likely to be stunted by drought, I advise the application of Gypsum broadcast, as evenly as may be and as bounteously as its price and your means will allow. I do not believe it so well to apply it specially to the growing stalks, a spoonfull or so per hill; and I doubt that it is ever judicious to plant it in the hill with the seed. The readiest and quickest mode of application is also, I believe, the best.

How Gypsum impels and invigorates vegetable growth, I do not pretend to know; but that it does so was demonstrated by Nature long before Man took the hint that she freely gave. The city of Paris and a considerable adjacent district rest on a bed of Gypsum, ranging from five to twenty feet below the surface, and considerably disintegrated in its upper portion by the action of water. This region produces Wheat most luxuriantly, and I presume has done so from time immemorial. At length, it crawled through the hair of the tillers of this soil that the substance which did so much good fortuitously, and (as it were) because it could not do otherwise, might do still more if applied to the soil, with deliberate intent to test its value as a fertilizer. The result, we all understand.

Gypsum is a chemical compound of Sulphur and Lime—so much is agreed; and the theory of chemists has been that, as the winds pass over a surface sown with it, the Ammonia which has been exhaled by a thousand barn-yards, bogs, etc., having a stronger affinity for Sulphur than Lime has, dissolves the Gypsum, combines with the Sulphur, forming a Sulphate of Ammonia, and leaves the Lime to get on as it may. I accept this theory, having no reason to distrust it; knowing that Sulphate of Ammonia is a powerful stimulant of vegetable growth (as any one may be assured by buying a little of it from some druggist and making the necessary application,) I can readily see how the desired result might in this way be produced. For our purpose, however, let it suffice that it is produced, of which almost any one may be convinced by sowing with Gypsum and passing by alternate strips or belts of the same clover field. I suspect that not many fertilisers repay their cost out of the first crop; but I account Gypsum one of them; and I submit that no farmer can afford not to try it. That its good effect is diminished by many and frequent applications, is highly probable, but there is no hill or slope to which Gypsum has never yet been applied which ought not to make its acquaintance this very year. I am confident that there are pastures which might be made to increase their yield of Grass one-third by a moderate dressing of it

I have heard Andrew B. Dickinson, late of Steuben County, and one of the best unscientific, uncarned farmers ever produced by our State, maintain that he can not only enrich his own farm but impoverish his neighbors' by the free use of Gypsum on his woodless hills. The chemist's explanation of this effect is above indicated. The plastered land attracts and absorbs not only its own fair proportion of the breeze-borne Ammonia, but much that, if the equilibrium had not been disturbed by such application, would have been deposited on the adjacent hills. As Mr. D., makes not the smallest pretensions to science, the coincidence between his dictum and the chemists' theory is noteworthy.

Now that our country is completely gridironed with Canals and Railroads, bringing whatever has a mercantile value very near every one's door, I suggest that no township should go without Gypsum. Five dollars will buy at least two barrels of it almost anywhere; and two barrels may be sown over five or six acres. Let it be sown so that its effect (or noneffect) may be palpable; give it a fair, careful trial, and await the result.—If it seem to subserve no good purpose, be not too swift to enter up judgment, but buy two barrels more, vary your time and method of application, and try again. If the result be still null, let it be given up that Gypsum is not the fertilizer needed just there—that some ill-understood peculiarity of soil or climate renders it there ineffective.—Then let its use be there abandoned; but it will still remain true that, in most localities and in countless instances, Gypsum has been fully proved one of the best and cheapest commercial fertilizers known to mankind.

THE HENNERY.

THE SITTING HENS.

After the hen has been sitting seven or eight days it is easy by a careful examination of the eggs to see if they contain chickens. This is the best seen at night. Take a lighted candle, or other bright light, to the fowl house, and a basket with a little straw to receive the eggs. Put the hand gently under the hen and take out an egg or two. Shade the eye from the candle with the left hand, making a ring by bringing the thumb and forefinger together. Hold each egg against this ring, so as to allow the light to shine through the centre of the egg. These eggs that have chickens will appear perfectly dark, except a clear space at the larger end. Those that are clear and that look as if they were filled with melted wax through which the light can shine, are useless and should be taken away. When all the eggs are examined the good ones should be immediately replaced under the hen. Now the advantage of setting two hens on the same day is, that if many of the eggs are clear, the whole batch can be given to one hen and a fresh lot to the other.

After the hens have been sitting twenty days some of the chickens begin to chip the shell. On this day the hen should not be disturbed. On the twenty-first day, or three weeks after the eggs were put under the hen, all the eggs will be hatched. Some take away those first hatched and put them in a basked with flannel by the fire. This is a very useless plan, as both hen and chickens had best be left alone. If not disturbed the hen will not leave the nest till the twenty-second day, and then all the chickens will be found quite strong and able to run. On no account should the chickens be crammed with food, until they are about thirty hours old, since they do not require any other nourishment then the yolk of the egg from which they were hatched. This passes into the inside, and nourishes them until they are sufficiently strong to run about and seek their food.

THE RUN FOR FOWLS.

Fowls never do so well as when allowed to wander unconfined over a free range of grass, or to scratch for their food in straw or manure heaps. Under these circumstances they obtain a great amount of food, and, consequently, cost much less to keep than when wholly fed by hand. There is also the great advantage that the variety of food obtained in this way conduces to their health and condition, so that their hardihood is far superior to that of fowls kept in a confined place, and the number of eggs proportionally increased. Still fowls may be kept with advantage in a confined space, provided the most scrupulous cleanliness is secured, the house cleaned out daily, and the run often swept and gravelled.

The great mistake usually committed by people who keep fowls in a small space, is that they attempt to keep three or four times the number that the place will accommodate properly. A cock and three hens should have a space of at least six by eight yards. Then, in order to supply the green food natural to birds, all the waste garden stuff, such as cabbage stumps, turnip tops, &c., should be thrown in for them to scratch and pick at. A spadeful of mould, full of worms and small stones, should often be thrown in, while the birds may be fed with barley and all the house scraps, such as boiled potato parings, bones, crumbs, &c. In the space above indicated, eight or ten fowls would be over-crowded, and they would all be likely to get out of condition and would not do well.

HOW TO MAKE HENS LAY.

People would better understand this matter if they considered for a moment, a hen to be, as she is, a small engine, with an egg-laying attachment, and there must be a constant supply of good feed and pure water to keep the engine and attachment up to its work. In addition to keeping before hens, who have complete liberty, a constant supply of pure water, Summer and Winter, I have found that during the cool and cold weather of Fall, Winter and Spring, a dough, compounded as follows, feed one day and then intermitted for two days, to produce excellent results. To three gallons of boiling water add one-half an ounce of common salt, a teaspoonful of Cayenne pepper and four ounces of lard. Stir the mixture until the pepper has imparted considerable of its strength to the water. Meanwhile the salt will have been dissolved and the lard melted. Then, while yet boiling hot, stir in a meal, made of oats and corn, ground together in equal proportions, until a stiff mush is formed. Set away to cool down to a milk warmth. Before feeding, taste to see that you have an overdose neither of salt nor pepper, and to warrant the hens against being imposed upon with a mixture not fit to be eaten. The hen mush should not be saltier than to suit your own taste; nor so hot with pepper that you could not swallow it, were so much in your broth. Beware of too much salt, too much lard and too much pepper; and between, too, where the seasoning is not too high, of feeding this dough too long at a time. Let the hens be fed one day fully with it, then let it be omitted and the ordinary feed given two days, and so on, and the result will be found satisfactory. Take notice—Hens fed this way will be a good deal less inclined to eat than when fed in the ordinary manner.

Miscellaneous.

All parcels should be carefully done up and sealed.

Miscellaneous.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other foods as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2 10 per cent. For life-sustaining properties to all stock exposed to sudden changes of weather or over-driving it has no equal.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and fattening quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine motion or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TRUE'S
IMPROVED
POTATO PLANTER,

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever produced.

It Saves the Labor of 10 Men in Planting Time.

Makes its own furrow, cuts the potato in such pieces as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them properly, and does all this as fast as a horse can walk over ground that can be plowed.

No intelligent farmer can see that an implement with which one man can, with the aid of a boy, plant six acres of potatoes in a day, is of inestimable value, because the days in which PLANTING can early be done are very few, while he has all summer and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it. Particulars and Catalogues can be had at our office.

DISEASES OF THE VINE.

It is all important that our Vine Growers should more thoroughly study all the various diseases to which the Vine is liable in other countries, and be prepared to prevent this evil here if possible; or if it comes, check and prevent it from doing serious injury.

As we are a believer in the doctrine that no disease can come where there is not a sure producing cause for it from bad soil, bad atmosphere, or bad culture. So we would urge study, care and attention to all these points, and we believe this evil may be prevented from coming to this Vineland of the World.

We have recently received a valuable little book entitled the "Hand-Book of the Sulphur-Cure," applicable to the Vine Disease, and we give a chapter from it upon the Oidium, which is as the author says, Mildew—we give the chapter upon

OIDIUM.

The vine disease, as they know it in Europe, is a little mushroom, a vegetable parasite, which hates to and grows upon the surfaces of the different parts of the grape vine. It is scientifically termed "Erysephe" more properly than "Oidium," and is classified as a "cryptogam" of the family of "Fungines."

To the naked eye it appears only as a fine whitish dust, covering portions of the leaves, buds, stalks, fruit, or fruit stems. Its existence was first discovered in the year 1845 on the vines of a greenhouse in Margate, England, whence it soon found its way across the Channel into France and thence spread rapidly over all Europe, carrying swift destruction wherever it went, and exciting the utmost dismay. In the Memoir of Mr. Berkeley it is described as follows:

"The essential characteristics of the disease of the vine are every where the same, whether observed at Margate, where it first appeared, or at Madeira, or in the South of France. At the same time, the appearance, the exterior aspect of the diseased vine, its "facies," in a word, vary with the variety of vine attacted, its force, its development; it varies also according as the attack is recent or remote—the case one of a few days' standing, or one several weeks old. Finally, the disease effects certain particular forms, which seem to change its nature (the red leaf or rougeau for instance,) and which give it a special malignity. It is all these causes united which have, without doubt, called forth so many different hypotheses relating to this disease.

"If, in summer time, we examine a vine that has been some few days diseased, we shall find it to have a languishing aspect. The color of its foliage has lost its liveliness and shine, and turned to a livid yellow. The green parts (the product of the year) are covered here and there, over all their surface, with a sort of whitish dust, but slightly adhesive, from which continually exhales a musty odor *sui generis*. This dust is, in fact, a species of mould. It is formed by the different parts of a little cryptogam parasite of the family of Mucedines. This it is that has been named by Mr. Berkely *Oidium Tuckeri*

"In measure as the divers characteristics just mentioned are developed, the vine appears attacked with a species of leprosy, which devours at the same time its stalks, leaves, and fruit. The old wood and the roots are not the seat of any alteration.

"The light patches of white dust with which the young shoots are covered, take, at the end of a few days, a gray color; they form, in the places they occupy, brown spots [De la Vergne, another writer, describes them as brown, black, or violet] which remain separate or run together, according to their nearness or to the persistence of the malady.

"This effect shows itself over the whole circumference of the shoot, but is more marked and more quickly produced on the upper side, where it is the most exposed to the sun's rays. These shoots grow but little. From the axils of their leaves arise numerous secondary branches of a particularly sickly aspect. This abnormal growth of stalk is a characteristic trait, and indicates a profound disturbance in the vegetation of the vine. It is local—that is to say, it will only be observed on those shoots that have been invaded by the white dust, and later by the brown spots.

"The youngest leaves at the ends of the branches are generally crisped; they curl more or less, the under side within. Their upper sides are sprinkled with light white dust, in patches more or less irregular; it is the same with their under sides; it is always these which are the first and the most seriously attacked. When the leaf is covered with down, the cryptogamic vegetation forms on it a peculiar sort of felt easily recognizable. When the disease reappears on a vine that has been attacked before,) the first symptoms commence, almost always, by manifesting themselves on the under side of the young leaves by those patches of felt. The leaf stem becomes covered with black spots," like the stalk of the shoot from which it grows. The grapes attacked by the disease become likewise covered with white dust, but much more abundantly than the shoots and leaves; sometimes they are completely covered, sometimes invaded only here and there, on a single grain in a bunch, or even a portion of a grain. The more recent the disease, the more white the dust remains, and the more "greasy" to the touch; if it is brushed off by rubbing the surface of the grain, no traces of it will remain on the skin; that will remain still intact. At the end of several days however, the dust will turn gray; then, if rubbed off, little black spots will appear scattered over the place it occupied."

After remarking that these spots never go deeper than the outer skin either of the fruit or other green parts, and that the same spots slightly roughen the surface, and are the seat of disorganizations whose consequences are ruinous, hardening the skin (so much more delicate in the European grapes than in ours,) so that, as the berries swell in growing, they crack open to the centre, often showing their pits. The same author goes on to say—

"The loss is much more rapid when the attack comes just after blossoming. The small size of the berries renders the disorganization of their whole surfaces easy; then they cease growing and dry up. When the attack finds the grape approaching maturity, it resists better. It seems to accomplish regularly the divers stages of its development; but, at the moment of ripening, the grain wilts, and considerable loss ensues, especially if the crop is not immediately gathered."

Again he says:

"The vine may be attacked at any age and at all epochs of vegetation, from the moment when the bud breaks out of its envelope down to the time when the leaves fall. It is easy to comprehend that between these two extremes there is a crowd of intermediate degrees, but at bottom the characteristics of the disease are always the same:

"Whitish dust (exhaling a musty odor) spread over the surfaces of the green parts to the exclusion of the old wood; disorganizations caused by this dust, which is composed of microscopic mushrooms (oidium Tuckeri;) evident trouble in the vegetation of the branches whose fruit, leaves, or stalks are invaded."

M de la Vergne agrees that, though the fungus in question has obtained the name of "oidium," it should properly be called an "erysephe;" while the author before quoted speaks of it as "the oidium, or erysephe of the vine." In common words, it is a fungus—a mushroom. De la Vergne claims to have discovered as early as 1863, three different varieties of oidium, which have successively followed the first, each one being less malignant than the one that came before it and all of them less malignant than the original.

In treating of the vine disease as known in America, I will call it neither oidium, cryptogam erysephe, nor mucedine, but give it the name commonly goes by, which is Mildew.

Fretting.

Two gardeners had their crops of peas killed by the frost, one of whom, who had fretted greatly, and grumbled at his loss, visiting his neighbor some time after, was astonished to see another fine crop growing, and inquired how it could be. "These are what I sowed while you were fretting," was the reply. "Why, don't you ever fret?" "Yes; but I put it off till I had repaired the mischief." "Why, then there's no need to fret at all." "True; that's the reason I put it off."

JUST RECEIVED—GOOD THINGS

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plants

(The Large Bell Variety,)

Ramie Seed, Fresh,

WATERMELON, CANTELOUPE,

AND

HUSKMELON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

IXED LAWN-GRASSETC.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

The California Farmer.

SAN FRANCISCO:
THURSDAY EVENING MAY, 12 th., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are open file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for *one* insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their special attention.]

We specially commend the Greeley Essay this week, on account of its most excellent practical value. The readers of the FARMER will see that we have Mr. Greeley's endorsement for all we have said of the value of *Gypsum*, and we hope our farmers will make thorough trials of it.

We especially commend it on the vine, pear trees, grasses, grains, and on the garden—*we* know its value. It should be largely used in this dry climate where it can accomplish so much.

We call special attention of vine growers to the articles we publish on the mildew of the grape, and the application of sulphur as a remedy while we also urge the use of *ground Gypsum*.

We have received the following for our next, too late for this week:

OUR EUROPEAN LETTERS.

OUR N. Y. CORRESPONDENT, M. A. S.

LETTERS ABOUT OUR AGRICULTURAL COLLEGE,

together with many very interesting Letters of enquiries from the old States; these will appear promptly.

NEW PUBLICATIONS.

We have received some dozen or twenty new publications on Science and Art, of which we shall speak next week.

TRIAL OVER.

The celebrated McFarland case is over, and the murderer acquitted—this was expected.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

BOOKS.

We are now receiving from our Book Publishers, evidence that we live in a Progressive age.—We are receiving many very capital and excellent practical Books—those that in a plain common sense way present in a clear and concise manner the subjects of the volume written. Among the books recently received, stand those of Professor Johnson, "How Crops Grow," and "How Crops Feed," two books worth their weight in gold.

We have also another book for Vine Culture.—The "Sulphur Cure," from which we publish freely this week—valuable Books these, they are worthy a careful reading by our Farmers.

A. Roman & Co., have these for sale.

Henry Courtland, is a pleasant treatise or story of "What a Farmer Can Do," by A. J. Cline, and Published by Lippincott & Co., of Philadelphia.

How to Farm to Profit, is still another valuable little Book, these all can be readily understood by working Farmers, and they all can profit by them. Our readers will be favored from time to time by some chapters from their pleasant pages. Roman & Co., have all these Books; our readers that wish can always send to us and we will procure them to order.

OREGON STATE FAIR.

We have received a Volume containing the Doings of the Agricultural Society of Oregon, with a List of Premiums for 1870, completed in January last, and sent over that State, and region of country.

The List of Premiums are very liberal, and many of the plans and Premiums are worth imitation by our California Societies, and especially their early action. No Society yet in our State having completed their work for this year and just thinking about. In our next we shall speak fully of Oregon.

THE SEASONS—CROPS, ETC.

The grand theme now is the dry weather, crops, etc. Our Newspapers seem to be full of reports of the condition of the crops, from many parts of the State, many of them are of an excitable nature and leading those who are not well posted to fear that our crops may be short, by reason of a dry season and want of rain.

We say emphatically to all "Fear not," our crops will be good, and abundant. The area plated this year is larger than the last, and all early planted grain—all grain planted upon deep plowed soil, or on land properly Summer Fallowed and was planted at the proper time, looks well, and promises to yield an abundant harvest. All the croakers and speculators say to the contrary, notwithstanding.

What we assert, we not only beleive to be true everywhere from our own observation, but we are fully sustained in our remarks by the direct approval of many of our most intelligent and well read, practical farmers.

When we speak of Summer Fallow, *proper* Summer Fallow, we mean that land which was well and deeply plowed the preceding year and left to rest that year—then before planting, the soil well and properly plowed again fine and the seed sown on dry soil to wait for the early rains, or planted in November or December, not three months after, and merely harrowed in.

There are many grain fields called Summer Fallowed that we have examined, where the land was plowed by what we term the "throw dirt over" fashion, where a furrow was run across the field, and on the return, a space of two furrows left untouched, and the earth by the return plow thrown over this untouched land. And this is left till planting time, then the grain is sown and harrowed in, and this some call Summer Fallow plowing and planting. This we call "botch farming"—had that soil been deeply and properly plowed before planting, then planted on dry soil, or early—such crops instead of now being burned up would show promise of a goodly harvest.—Beside this they would not bring a disgrace upon the character and system of Summer Fallow.

Late planting and shallow plowing, we assert as the cause of the loss of so many crops. Cultivation produces moisture—the sun in its fiercest heat over broad fields well cultivated, acts as a powerful Hydraulic Engine, and draws up from the deep resources of that well tilled soil, the moisture to feed the surface roots,—this is always so, for the laws of Nature are wise and good, reiterating the truth, "as ye sow, so shall ye reap."—"They that sow sparingly, shall reap sparingly," and it also means those that plow sparingly shall reap sparingly—and this will be found true.

If any one desires to be convinced of these facts let them as we have before advised, take a trip in the Western Rail Road Cars, from Oakland up to Stockton and Sacramento, and there see the different kinds of cultivation, and all who see will agree with us. Let them see Livermore Valley that has been the subject of so many newspaper paragraphs, by writers that never saw it, and only take hearsay as a guide. We speak from what we know, and are not influenced by croakers or speculators, and only aim to give true information and for the good of all.

With this aim we again say our total crops this year will be much larger than last year.

The Hay crop promises well, and a good crop in view—our grain growers where they see their crops receding should cut soon as possible for Hay.

The Fruit crop generally, will be large, very large, Strawberries ad Cherries are now flooding our Market. Blackberries and Raspberries will soon be with us in abundance.

Figs, a great luxury, will be more abundant this year, and more sought for. This is one of the best and most healthy fruits known.

As an evidence of a good and rapidly advancing season, we can note the appearance of crops upon the plains below Sacramento, near Elk Grove, nothing could look finer, nothing more conclusive of a good harvest, the result of well cultivated fields. There we saw large fields of Barley, the large full heads bowing in their golden hues, now nearly ready for harvest—Wheat in excellent growth, a strong healthy stock, rich dark green, and heading well.

Here too the Haying has begun in earnest, and large crops are sure—here also can be seen large fields of Corn, and Potatoes, all by a good system of cultivation, promising a goodly harvest. There is no drought here, no burning up of crops—the earth has been wisely subdued by the intelligent industry of man, and the result is seen not only in the crops named, but in the orchards and vineyards that also bear a living and healthy look, the observing traveller can have a beautiful sight, and the fragrant air can be inhaled—these two senses most highly gratified. Let those who talk about drought and famine, go now and enjoy this scene and they will no more listen to croakers who talk of lost crops. This picture of prosperity here, can find many like it over our State wherever judicious cultivation has been practiced.

RISE OF THE WATERS.

The recent hot weather has sent down from the mountains its copious flood of ice water to cool off our Vallies below, the Sacramento river is full up, looking like old flood times. On the San Joaquin river at the Bridge Station, the waters have spread over the banks and covered the plains but doing great good, giving moisture below, to the soil.

Along this entire range, from the San Joaquin Bridge to Stockton, the Grain and Grass is in very fine condition—here and there may be a poorely tilled field, but the whole is fine and the waters will do no injury.

DON'T BLEACH YOUR HAY.

It is to be regretted that so many hay makers allow their hay to remain in small parcels in the field, until all the real goodness is bleached out by the hot sun, and the hay looks more like *straw* than well cured hay.

OUR AGRICULTURAL FAIRS.

What do our Agricultural Societies intend to do the present year, is, the inquiry that comes to our office every week and many times too. Shall we have a State Fair? Will there be any District Fairs? Shall we have a Plowing Match? a Trial of Reapers and Mowers? a Trial of Headers? What is to be done is the emphatic inquiry, and say the inquirers, here it is the middle of May and no word or sign of a Fair.

Our contributors to Fairs think they should be informed of the plans of the Fairs in such a season as to enable them to prepare for them. They say in former years they had no notice till within a few weeks, and thus the great interest in Fairs are lost.

It is certainly expected where the money ($5,000) comes from the "Treasury of the State" that the people should be early advised of how this $5,000 is to be expended. Our Farmers, Mechanics, Dairymen, Vineculturalists, Fruit Growers, Wine Makers, Manufacturers and Florists, claim a due share of this amount, and also of the time and care for these interests from those to whom this Fund has been entrusted.

These interests just named protest most earnestly against having all this fund or the most of it expended to sustain a "Race Track." The races have in many of the late years of our Fairs actually consumed the greater portion of the State donation, and the income of the Fairs, while other interests have been almost wholly neglected.

The last year of our State Fair, our Gardners and Florists were "left out in the cold" were not named in the premiums. Such neglect of the real interests of agriculture has destroyed the interest and good will of thousands in our Fairs, while the rush for the Races and the mad confusion, the gambling scenes, the drunkeness and obscenity committed therewith was the cause of reproach everywhere the last year, so much that the authorities of Sacramento were powerless to stop the evil in that city.

It is to be hoped that a better state of things will take place everywhere this year, for we shall have immense numbers of strangers with us at the *Fair time*, and if these things are permitted again our intelligent visitors will not hesitate to place the blame where it properly belongs, upon the HEADS OF THE MANAGERS THEMSELVES.

SACRAMENTO.

This city is rapidly advancing in all the material elements that constitutes and gives assurance of prosperity.

Since the heart of the city has been raised to the high grade, the spirit of improvement has been constantly going on; streets improved by wooden pavements, old buildings torn away and new and valuable ones erected, hotels enlarged and improved accommodations for travel and personal comfort everywhere increased, many private residences of magnificent style have been built, among them the beautiful mansion of Charles Crocker, Esq., one of the finest in our State, its stately beauty without only surpassed by the elegance and artistic taste manifested within in rich furniture, paintings, statuary, &c., making the mansion and furniture a complete whole. The new building erected by the Odd Fellows on Tenth and J streets, will be a splendid building and add much to the great thoroughfare of J street. Scores of new warehouses, stores and family residences are rapidly springing up all over the city.

The Central Pacific Railroad is the great artery of business life, that sends the *life-blood* thus to build up this city as well as our whole State, for no one can for a moment doubt but that the opening of this great highway has *saved Sacramento*, and has led her on to the highway of business and permanent prosperity.

MUSICAL CONCERT.

Sacramento the "Queen City of the Plains," the Capital of our State, has resolved to hold a GRAND MUSICAL FESTIVAL in that city on the 16th and 17th of the month (next week). By their plans proposed, and the great interest manifested for it, the festival will, undoubtedly be a very happy affair. Professor Scott will be the grand head and leader, the Laemlein Sisters and other celebrated musicians, together with musical societies from Marysville, Stockton, Folsom and our own city will all unite to make it a grand affair indeed.

It is intended to offer some selections of music never before offered in this country, these with the Grand Anvil Chorus, the firing of cannons by electricity will constitute the grand features of the entertainments.

The proceeds of these concerts are for the benefit of the Congregational Church of Sacramento.

The railway companies and steam lines have offered liberal deductions for companies, and all who wish to attend these concerts, we hope it may be a grand success.

HOTELS.

The largely increasing travel to and from Sacramento has required an addition to her Hotel room and accommodations. To this end the enterprising proprietor of the GOLDEN EAGLE has within the year doubled the size of his hotel, adding largely to his means of accommodation, and now the GOLDEN EAGLE can be classed as one of the best hotels outside of our city, and for the courtesy, attention, comfort and good living not surpassed by any. Travellers should remember the GOLDEN EAGLE when they visit Sacramento.

This city is now coming out of her sorrows, her "dark days" are past, and she can look forward to years of permanent and great prosperity.

Every time we visit this city we see new and substantial evidences of this coming prosperity, new places of business, splendid buildings and public edifices of great cost proves this. Business is lively, and all the people have a pleasant and happy look like "Swimleys" boarders.

Vermont has elected three female superintendents of schools.

NEW COMERS TO OUR STATE.

The ease and rapidity with which the citizens of other States can visite the Pacific shores now, is manifested by the great number that come to California from all parts of the Union, and from Europe. The Pacific Rail Road is now bringing to us thousands of the most prominent men of the land. Men of all professions and interests,—men who can and do comprehend the vast resources of our State, and men too, who appreciate them.

From the present moment during all the travelling season, our City and all the interior Cities, are thronged with the citizens of other States and Europe, who come to see and to judge for themselves, if all the reports they have heard of this wonderful land is true.

DISTINGUISHED VISITORS.

During the season there will be many strangers from abroad, whose lives and public services have been of that character that should demand of our citizens some mark of recogoition that we do appreciate the good they have done. All public benefactors should receive the approbation of those for whom they have spent their life energies. The Scriptures teach that "Well done good and faithful servant" should always be accorded to those who do well.

HON. MARSHALL P. WILDER.

Among the many distinguished men who will come to California the present year, no citizen of our country deserves a more cordial welcome to this "Garden of the world," than the Gentleman we have named.

Mr. Wilder has spent a whole life in the cause of Horticulture, he is now and has been for years the President of the American Pomological Society, the Head and we may say the Heart, of the Horticulture and Floriculture of our country, and coming as he does to California to see for himself the Pomological and Horticultural wealth of our State particularly he should receive from the Fruit Growers of our State a most cordial reception, and a public welcome.

It is expected that Mr. Wilder will be accompanied by several distinguished men from Europe, and the Eastern States, who are identified in this great interest, and it certainly is to be hoped that they will receive due attention.

There are a great number of our new comers to the State that wisely give their time in viewing our celebrated places, such as the Yosemite, the Big Trees, Geysers, etc., etc.

We met on the Western Cars, on Thursday, a party of fourteen on their way to the Yosemite, Big Trees, etc.

The Boston Board of Trade are coming with the Governor of that State and other States, and it may be our President and Members of his Cabinet, may soon be with us. Let us do honor to such men, for they are deserving of it.

We hail with joy the coming of the best men of the old States, for such will do our State justice and we shall be greatly benefitted thereby, were we to record their names it would occupy columns.

FIRE! FIRE!! FIRE!!!

The dry season is upon us, the windy season also, and a cigar thrown upon a grain field; the wad of a gun, the hunters fire in the woods, while roasting his food, a spark from a chimney, or from the steamer's flue while passing up our rivers, may soon create a flame that shall spread desolation far and wide, and the man that had a happy cottage home, and surrounded by many social comforts and blessings *to-day*, may rise on the *morrow* a ruined, homeless man. Why is it that so many industrious and otherwise careful men, *neglect* the "one thing needful," INSURANCE AGAINST FIRE? Why, we again ask, will men be "a penny wise, and a pound foolish?" Why will men, generally hard-working, neglect to *insure against fire*, when they see the ruin and desolation of others?

The present rates of safe insurance are very low, and there is no excuse whatever for any person, how ever humble his station or small his means, for allowing his *all of this world's goods* to remain *uninsured*. Common sense, reason, and religion, all demand that the *head of a family* should provide for, and make his own household safe against the dangers, calamities and suffering that fire causes. Reader, look to our columns and read about Insurance, its value and safety, and then go and be insured before you sleep; our columns will also tell you *where* to secure a reliable "Policy of Insurance."

A CONTRAST.

ABUNDANCE *vs.* FAMINE.

There has never been so good an opportunity for all who read about, and talk about "the crops" to go and see for themselves at the present time by a very short and pleasant trip that can be made from our city to Sacramento, over the Western Rail Road route.

If our newspaper itemizers would do this, they would write better and truer articles, let the observers begin to note the crops after leaving San Leandro, from thence to Vallejo Mills, thus for the picture of abundance. From thence decreasing, and then all through Livermore Valley, barrenness and Famine prevades. This desolate and burnt up look continues till nearing the San Joaquin Bridge region, where prosperity begins to reign again. From thence to Sacramento the word abundance is every where, and on everything stamped in golden letters.

We ask those who feel a true interest in the crops of our State to go and see the difference, for it is a fair sample of wise and unwise tillage.—The first always rewards abundantly, the latter rewards too, in natural results, an empty treasury and disappointment.

Madame Anna Bishop is contemplating a farewell tour of the United States and British Provinces.

OLE BULL.

"——who has not felt the strong power of a word
The magic that thrills us, when some names are heard."

From our New York exchanges we gather the following incident connected with the departure of this renowned Violinist, whose wondrous melodies have charmed so many loving hearts, and whose strains, though silent now to our mortal ear, are still echoing sweetly in the illuminated chambers of MEMORY.

"Such sweet, such melting strains!
Their soft harmonious cadence rises now,
And swells in grandeur to its highth!
Now sinks to mellow notes—now dies away—
But leaves its thrilling Memory on my ear."

The numerous earnest warm friends of Ole Bull will be pleased to learn of the words of cheer, the pleasant greeting and the heart wishes of the many that attended him on his departure, and which we here annex.

DEPARTURE OF OLE BULL FOR NORWAY,
FAREWELL OF HIS FRIENDS.

Ole Bull, the world renowned master of the violin, left the city of New York, April 28th, to return to his home in Norway. His friends were determined that he should not leave without receiving some demonstration of their esteem and accordingly escorted him to the foot of Whitehall Street, and about fifty of the most intimate accompanied him on board a Revenue Cutter to the Russia, which was lying in the North river. Of the party were Dr. Doremus and the other officers of the Philharmonic Society, Gen. Banks, Senator Conkling, Prof. Horsford, Dr. Gallaudet, Col. Fred E. Howe, Mr. W. McDonald, the popular tenor singer of the late Ole Bull Concert Troupe, Alexander Bull, son of the celebrated musician, Mrs. Doremus, Mrs. Belknap, Miss. Adelaide Phillips, Alida Topp, Mrs. Bowers and other celebrities.

The Revenue Cutter took a circuitous route over the waters of the beautiful bay, while a band furnished by the Philharmonic Society, played inspiring airs, and on its way to the steamer a Norwegian flag with the American colors skillfully wrought in miniature in one corner, was presented to Ole Bull in the name of the Philharmonic Society. The presentation was made by the fair hands of Mrs. Doremus, her husband making the presentation speech, in which he alluded in terms of the highest admiration to the triumphant musical career of the distinguished recipient, and the service he had done to his art, especially here in America. The famous Norwegian received the flag with a felicitous speech of thanks and other brief addresses were made by Gen. Banks, Senator Conkling and Mr. Belmarts, all paying a glowing tribute to the genius of their departing friend. After they had seen him safely on board the Russia, and taken an affectionate leave, they followed the steamer down the bay in the Cutter and fired a parting salute.

Apropos of the departure of the Norwegian Orpheus, it may be mentioned that the monument project has prospered among his countrymen here, and committees have been formed all over the country to collect funds for its completion and a fitting celebration of the one thousandth anniversary of Norwegian nationality.

THE PULLMAN CAR LUXURY.

WHAT THEY COST.

The capital stock of the Pullman Palace Car Company is now $8,000,000, with cars running over 15,000 miles of railway, and employing 1,000 men—not counting the artisans at the shops and manufactories. To meet the growing business of their recently extended operations $1,000,000 more stock was issued and immediately the stock was all taken by the stockholders, who have "ordered" 2,500 additional shares. About $500,000 of the stock is owned by New Yorkers and an equal amount by capitalists of Boston. All this comes from the original capital stock of $1,000,000 which the orginator started with only three years ago. Who says the American people do not appreciate the luxury of riding and eating and sleeping in palace cars?

The new Portable Hotel Car connected with the sleeping and travelling Pullman Cars are now all complete, so that parties can be made up at any of our cities on the line of the great railroad, and chartered cars can travel at their leisure, stopping when and where they please along the line.

It will be recollected that S. M. Pullman, Esq., the originator of these cars, with his family and a party from Chicago have recently visited this city and returned.

A party of twenty persons can travel in grand style for about four dollars per day in this way and the further cost of living is about two dollars per day.

The new improved cars on twelve wheels recently finished and furnished cost $22,000, the price of a superb mansion, this, therefore, is travelling in Hotel style.

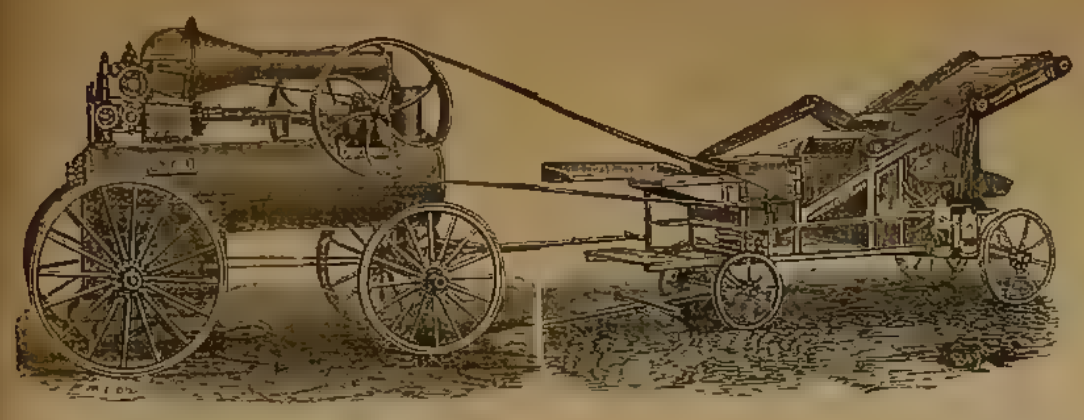
So much for this "age of progress," a vast difference from the old-fashioned stage riding.

STATE AID TO RAILROADS.

If we are a free people, and we are allowed to do as we will with our own, we should suppose that our Representatives of our State have the *right* to say that our cities and counties may vote away just as much money as they please for Internal Improvements. As these questions of aid to many railroads are intended to build up the very districts through which the railway shall pass, it would seem to be hard if it violated our Constitution to do so—if that is the case let the *Constitution* be altered, for we believe our people will stand by the railroads. It would seem that we did not have a *free country* if the people could not be *themselves*. We trust when the time comes for the people of the city to vote for *that* MILLION OF DOLLARS subsidy to the railroad, they will give as handsome a majority as Stockton gave—that will settle the question.

Massachusetts has educational institutions other than public schools, valued at $9,447,[illegible]

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs,—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails.

LANDED ESTATES FOR SALE.

Now that we have so many new settlers of the better class coming to our State, those who have

FARMS, IMPROVED HOMESTEADS,

LANDS, RANCHES, &C.,

should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our JOURNAL, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

☞ One thing is certain:—No disreputable Advertisements can appear in our Journal. 33-1

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural men, Nurserymen, Stockmen, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO ENGAGE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Eds. and Prop'rs.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EARLY ROSE POTATOES.

A Splendid lot of these,

Best of all Early Potatoes,

And raised here in California can be had at the

New York Prices.

We invite all Potatoe growers to call and see them at our office, where we can show them a sufficient number of testimonials as to their Quality and Productiveness to convince all that the EARLY ROSE is the very

BEST EARLY POTATOE KNOWN.

One of the grand features of this wonderful Potatoe is that it succeeds most admirably in high, dry lands—Some grand results we have here in reports now to be published.

Those who want Pure Seed of California growth, and at New York rates or what it would cost to bring them here, can have larger, fairer and fresher Seed than any that can be imported.

For Sale at FARMER OFFICE,

320 Clay Street, San Francisco.

20,000 NEWSPAPERS.

We have TWENTY THOUSAND Newspapers—Newspapers of the largest size among our Exchanges, suitable for WRAPPING PAPER for Dry Goods, Clothing, etc.

—ALSO—

TEN THOUSAND

Of the best Agricultural Papers known, comprising our various Agricultural Exchanges from all the Eastern States and Europe. Farmers who would like valuable reading matter, which contain choice Essays and Letters on Agricultural matters, can have these at low rates by the 100. Apply at FARMER OFFICE.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

Home Miscellany.

POWER OF SHORT WORDS.

The late Professor Addison Alexander, D. D., is the author of the following remarkable composition, which appeared originally in the Princeton Magazine:

MONOSYLLABICS.

Think not that strength lies in the big round word,
Or that the brief and plain must needs be weak.
To whom can this be true who once has heard
The cry for help, the tongue that all men speak,
When want or woe or fear is in the throat,
So that each word gasped out is like a shriek
Pressed from the sore heart, or a strange wild note,
Sung by some fay or fiend? There is a strength
Which dies if stretched too far or spun too fine,
Which has more hight than breadth, more depth than length.
Let but this force of thought and speech be mine,
And be that will may take the sleek, fat phrase
Which glows and burns not, though it gleam and shine
Light but not heat—a flash, but not a blaze!

Nor is it mere strength that the short word boasts,
It serves of more than fight or storm to tell,
The roar of waves that clash on rock-bound coasts,
The Crash of tall trees when the wild winds swell,
The roar of guns, the groans of men that die
On blood-stained fields. It has a voice as well
For them that far off on their sick-beds lie;
For them that weep, for them that mourn the dead;
For them that laugh and dance and clap the hand;
To joy's quick step, as well as grief's slow tread,
The sweet, plain words we learnt at first keep time.
And though the theme be sad, or gay, or grand,
With each, with all, there may be made to chime,
In thought, or speech, or song, in prose or rhyme.

A SOFT ANSWER, ALMIGHTY.

MRS. THOMPSON'S WHITE WARE.

The following tender and touching story we publish for the benefit of all hard-hearted Husbands, who can replace broken crockery easier than they can replace a broken heart.

Mrs. Thompson stood by the kitchen table paring potatoes for dinner. There was evidently something wrong with the little lady, for there was an unmistakable air of "spite" in the way she tossed the potatoes into the pan of cool spring water, waiting there to receive them. It was sultry weather; and through the open window came the sound of mowers whetting their sythes, blended with the call of the robin, and the faint notes of the cuckoo in the shaded woods. But it only irritated Mrs. Thompson—indeed everything irritated her that day. Looking out from the back door, might be seen a lovely landscape, with broad reaches of meadowland, fringed with graceful belts of birch; and softly-rounded mountains lifting their velvety foreheads to the white fleecy clouds, that went slowly sailing across the exquisite ether, like huge drifts of thistle-down. But this also irritated her; everything could be beautiful save her life, and that was cold, and rude, and barren. At least, Mrs. Thompson, in the plenitude of her present unsatisfactory mood, was telling herself that it was.

To begin at the beginning. Jane Lawrence had been an unusually romantic girl, and had gone for two years to a boarding-school. She had always fancied that she would marry some famous artist or scholar, who would take her to Rome and Venice, where she might live in a perpetual dream of beauty. She so loved beautiful things! Perhaps all women do; and that may be the reason so many are found ready to barter love for gold. But, contrary to all her pre-conceived notions, she married Robert Thompson, a plain, practical farmer; and instead of touring it in Italy, she went to live at the old homestead, which had been the abode of the Thompsons for generations. Dreams and reality are so very different, you see.

Robert Thompson was a working farmer as well as a practical man, and all his people worked. His mother had worked in her day, his sisters had worked, he expected his wife to work. She took to it gleefully. She had not been brought up with high notions by any means, and at first the work did not seem so much. But every experienced woman knows how the labor seems to accumulate in a plain farmer's household as the years after marriage go on. There were plenty of men and boys about, but only one woman servant was kept, and Mrs. Robert Thompson grew to find she helped at nearly everything, save perhaps the very roughest of the labor. In place of lounging in elegant foreign studios, or gliding down famed canals and streams in picturesque gondolas, she had butter and cheese to make, and poultry to rear, and dinners to cook in the long, low celled kitchen, and the thousand and one cares upon her shoulders that make up a busy household. Quite a contrast, as must be admitted.

With things a little different, she'd not have minded the work so much, if she could have had nice carpets and tasteful furniture and books, and a picture or two, and flowers. The home was so very hard and practical and its surroundings were getting so shabby. At first she had not noticed this, or cared for it; but every year, as the years went on, made matters look dingier. Old Mrs. Thompson had not cared to be smart and nice; Robert never thought about it. And what though he had?—it is only natural for men to assume that what had done for a mother would do for a wife. In time Mrs. Robert Thompson began to ask that some renovation should take place, at which Robert only stared; the house that had done without painting so long could do yet, and the old things in it were good enough for them. She did not venture to urge the point, but she did press for some flowers. There was a strip of ground under the south parlor-windows where a shrub of sweet-brier grew, sweet-williams and marigolds blossomed in their seasons. But they were old-fashioned, common flowers, and she pined for the rare and elegant plants she had seen in conservatories and public gardens. But Robert Thompson would as soon have thought of buying the moon as such useless things as flowers. The garden, like himself, was all practical, filled with cabbages, onions, potatoes, and sweet herbs. And so went on her unlovely existence, in which dissatisfaction was becoming a night mare. Now and again, on those somewhat rare occasions when she went out to visit her neighbors, and saw how pretty many of them had things, she came home more than ever out of heart. The worst was (or the best) there was no real reason why a little money could not be spent in making the home prettier and happier, for Robert Thompson was doing well, and putting fairly by. But understanding had not come into the man, and his wife was too meek, perhaps too constitutionally timid, to make trouble over it.

The matter to-day—which had just put her so much out—was this: A sewing club had recently been established in the neighborhood. There was much distress amid the poor laborers' wives and families, and some ladies with time on their hands set up a sewing-club, to make a few clothes for the nearly naked children. The farmers' wives had joined it, Mrs. Thompson among others; they met at stated intervals, taking the different house in rotation, dining at home at twelve, assembling at one o'clock, and working steadily for several hours. It was surprising how much work got done, how many little petticoats and frocks were made in the long afternoons. In less than a months it would be Mrs. Thompson's turn to receive the company—for the first time—and she naturally began to consider ways and means. For they met for the entertainment as well as for sewing—tea in the afternoon, a grand meal later when the stitching was over.

What was Mrs. Thompson to do? Their stock of plates and dishes consisted of a few odds and ends of cracked delf, that had once been a kind of mulberry color. She long wanted somenew white ware, she wanted it more than ever now. Grover, the keeper of the village crockery-shop, had a lovely set for sale, white, with a delicate sprig of convolvuli and fuchsias, looking every bit as good as real china. Mrs. Thompson had set her heart on the set, and that morning had broached the subject to her husband.

"What's the matter with the old ones?" asked he.

"Look at them," she answered. "They are frightfully old and shabby."

"I daresay the food will taste as well off them as off Grover's set of white ware."

"But there's not half enough. We have as good as none left."

"Mother has some best china. Where is it?"

"That's nearly all gone. We couldn't put the two on the table together."

"Why not?"

"Oh, Robert! Look at this. It is the shabbiest old lot ever seen."

"'Twas good enough for mother."

Mrs Robert Thompson disdained compliment.

"You'd not have thought of this but for the sewing-circle having to come here. If they can't come and eat from such dishes as we've got, they are welcome to stay away."

There were tears in Mrs. Thompson's eyes. But she crowded them bravely back. He took his hat to go out to his mowing.

"We really want the things, Robert. Those at Grover's are very cheap. I can get all I want for a mere trifle; do give me the money."

"Grover'll have to keep'em for us. I've got no money to waste on fine china," returned the farmer. "By the way"—looked back from the door—"Jones and Lee are coming to give me a helping hand. I want to get the South meadow down to-day if I can—it's a famous heavy crop; so I shall bring them into dinner. Oh, and the Hubbards want six pounds of butter to-night; don't forget to have it ready."

With these words, Mr. Robert Thompson had marched off, leaving his wife to her long, weary day's work, darkened and made distasteful by her disappointment. She was both grieved and angry. It was a little thing, perhaps, but it is the little things of life that delight or annoy.

Existence seemed very bare and homely to Jane Thompson that summer day. With her love of ease, and beauty, and symmetery, how rude, and coarse, and hard, looked all her surroundings. It was only one long, monotonous round of homely toil, unrelieved by any of the little sweetnesses and graces that might make even toil pleasant. She did not often think of it; but she remembered that day, with the faintest little air of regret, that she might have been far differently situated, and as she looked up to the pretty French cottage on the hill, embowered in a perfect forest of blossoming vines, and caught the cool gleam of urn and fountain, something very much like a sigh trembled on her lips. Squire Burnham's wife does not have to beg for a paltry bit of money to set out her table decently," she thought, rebelliously.

And, then, in her spirit of aggrievement, she mentally went over the other things she needed. Why was life to be all toil and bare ugliness? There was no reason; he had plenty of money. A new carpet for the best parlor, paper for the walls, so stained with time, whitewash, paint, some fresh chintz, she remembered it all, as she toiled through the long sultry forenoon with an aching head and discouraged heart. It happened to be washing-day; and on those days she took all the work that Molly might not be disturbed in her help at the tubs.

What business had she to marry Robert Thompson? she asked herself, her slender wrists beating away at the butter for the Hubbards. For in the green and gloomy light that Mrs. Robert Thompson looked at things to-day, she quite forgot the fact that she had fallen in love with the honest, steady, and good-looking young farmer, choosing him in preference to Joe Burnham, whom she might have had. Joe had a patrimony of his own; two hundred a year at least, and a good bit of land, which he rented, and was called "Squire," as his father had been before him. He wanted to marry Jane Lawrence, and she would not. Likes and dislikes cannot be controlled, and she cared more for Robert Thompson's little finger than for the whole of poor, under-sized Joe. Squire Burnham found another wife. And Mrs. Thompson, this weary day, was furiously envying her. Mrs. Burnham could come amidst the rest of the sewing-club, too, and see the miserable shabbiness of the mulberry-ware and the home generally. The butter got beaten savagely at the thought.

(Concluded next week.)

SHARP.

Last Sunday in one of the Sabbath-schools of our city, says the Burlington *Hawkeye*, a juvenile class was questioned by its teacher in regard to the parable of the shepherd and his flock:

"Who is the shepherd?"

"Jesus."

"Who is Christ's lambs?"

"We are."

To test the reasoning capacity of the young urchins:

"If the children are the lambs, what are grown up folks?"

Said a bright-eyed little shaver—

"They are the old bucks!"

There's a moral taught of the following conversation, which needs to be learned by many fathers. Said a little four year old: "Mother, father won't be in heaven with us, will he?" "Why, my child?" "Because he can't leave the store."

Some ill-bred fellow has found out that husbands are like dough, because wives knead them. It has never occurred to us before, but may no this explain why there are so many crusty fellows?

From the display made at our more fashionable parties, it is a reasonable conclusion that it is not her wrongs, but woman herself that ought to be re-dress'd.

TASTE.

No statuary that the rich man ever placed in his window is to be compared with the little expectant face pressed against the window pane, watching for "papa," when his days labor is done.

Men's lives should be like the day, more beautiful in the evening; or, like the summer, oglow with promise; and the autumn, rich with the golden sheaves, where good work and deeds have ripened on the field.

If half of the poor women who eke out a miserable existence in our large cities would go into the country, they would not only better their own condition but that of their sisters left behind. But advice of this kind, unfortunately, is the very last they are disposed to take.

Love, in all its shapes, implies sacrifices. Much must be conceded, much endured, if we would love.

It is said that the Maharajah Duleep Singh commemorates his wedding-day by an annual gift of £1000 to the mission-school in Cairo, where his *wife* was a pupil when he first saw her.

If the heathen thus remember a good wife, Christians should imitate their example.

There is a dignity in *silence*, which though we must not assume it for our own sakes, we may prudently preserve for our cause's sake. And let me add, that there is scarcely any more salutary exercise of self-denial, than to suppress that very thing, which, on ground of feeling, we should be eager to send abroad.

An exchange says that a great economy in the manufacture of bread is secured by the following process. Gluten to the amount of ten or twelve per cent is extracted by boilling water from bran and the flour is kneaded with this infusion, whereby from twenty to thirty per cent more bread is obtained. The bread, of course, is not so white as that of first quality, but is much more nutritious.

Bleeding from the nose is always regarded as an unwelcome event, yet, in the opinion of Dr Hall, it always is beneficial, preventing headache or more serious illness, and sometimes arresting apoplexy and sudden death. Therefore it should not be immediately arrested. When the nose threatens to bleed excessively, it can sometimes be arrested by putting the feet in hot water, or by applying a mustard plaster between the shoulders.

The eagerness of the freedmen for learning is equaled only by their eagerness for land; and they are gaining a foothold on Southern ground. On the islands near Charleston 2000 families have paid for their little farms. During the last year 300 have bought places near Augusta, and a greater number have put up houses near Atlanta. Of the $12,000,000 which the freedmen's banks have taken, at least one half has been saved for actual investment. It is drawn out mainly to buy homes.

REMEDY FOR HEADACHE.

There is scarcely any ache to which children are subject, so bad to bear, and so difficult to cure, as earache. But there is a remedy never known to fail. Take a bit of cotton-batting, put upon it a pinch of black pepper, gather it up and tie it, dip it in sweet oil, and insert it in the ear. Put a flannel bandage over the head to keep it warm. It will give immediate relief.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

BATH HOUSE,

No 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense has been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sunday from 7 A. M. to 2 P. M. 31tj

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICHTHYOLOGY, and ENTOMOLOGY

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORILLA recently exhibited ALIVE in Paris, has been added to the already vast collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us!

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

Miscellany.

SAVED.

The following interesting story is told of Sir Thos Negean, formerly Under Secretary of State of Great Britain. "One summer night he was afflicted with an unaccountable sleeplessness, and being quite weary of lying awake, he got up, dressed and went out at 3 a. m., strolling aimlessly more from daily habit than anything else, down to the Home Office. Entering his private room his eye caught the following entry in a memorandum book. 'A reprieve to be sent to Coiners ordered for execution at York.' Although he knew that he had done his own part of the business, he was seized with a nervous uneasiness, fancying that perhaps the other people had not done theirs. The feeling was so strong upon him that he called up the chief clerk in Downing St., who said that he had sent it to the Clerk of the Crown, whose business it was to forward it to York. 'But have you his receipt and certificate that it is gone?' 'No.' 'Then let us go at once to his house in Chancery Lane.' They did so, and found him in the act of stepping into his gig for a country holiday. He had forgotten the reprieve, and left it locked up in his desk! The fleetest express procurable was dispatched, and reached Lockjost as the criminals were mounting the cart. It too often happens that familiarity with such trusts begets a corresponding indifference to them. The signalmen employed on our railway declare that the hardest thing for them to bear in mind is the fact that hundreds of lives depend upon their constant vigilance, and at the most critical moments sleep, or even recreation sometimes prove almost irresistable temptation, to the neglect of duty."

THE POWER OF MUSIC.

Mme. Adelina Patti's recent farewell at the Opera House at St Petersburg seems to have been a succession of triumphs. After the first act of "Crispino," the Emperor proceeded to congratulate the popular favorite, while the *chef d' orchestre* handed her a magnificent bouquet of camellias with a brooch, in the center of which was an enormous pearl, surrounded by thirty diamonds. This jewel, worth nearly £3 000, was the gift of a club. Six recalls followed. Next came the first act of the "Traviata," followed by eight recalls, a shower of flowers, etc., and the "mad scene" from "Lucia" concluded the performance. After this, however, Mme. Patti was veritably crowned with a wreath of laurels set in a massive gold coronet, presented by the orchestra, the enthusiasm of the audience exceeding all bounds.

ARTIFICIAL CULTIVATION OF SALMON.

The operations for the artificial propagation of salmon at the Stormontfield breeding ponds have this year been carried on with great vigor. The ponds have been stocked with about 465,000 salmon ova, which exceeds the number deposited in any former year by about 100,000. In consequence of the long-continued frost the hatching process was somewhat retarded. The operations at Mr. Buckland's Museum of Economic Fish Culture, South Kensington, have so far been successful. Although on a much smaller scale than the Stormontfield ponds, thousands of fish are annually hatched by Mr. Buckland in the Horticultural Gardens. This year the eggs deposited were in healthy condition, and within the past fortnight several have been hatched out. The varieties of ova which are deposited this year consist of salmon, trout, great lake trout from Lake Neufchatel, American trout, and salmon from Nuaingue. Upwards of 80,000 eggs of the great lake trout from Switzerland have been received during the past year by Mr. Buckland, and have been distributed by him to stock lakes and ornamental waters in various parts of England

By Ya Ready.

There used to be a pious old negro in Boston named Cæsar, and he was in the habit of praying so loudly as to be heard by many of the neighbors. On retiring for the night his petition invariably was: "Lord, send dy angel for ole Cæsar—ole Cæsar always ready." One evening two of his neighbors, good men, but sometimes bored by his "style," thought they would try him on. They took position at his door, and when the usual petition was made that "the Lord would send the angel," ole Cæsar being always ready, they knocked loudly at the door.

"Who dar?" said the darkey.

"The angel of the Lord, come for old Cæsar," was the reply.

Out went the light, a scrambling into bed was heard, and then, in trembling voice, that same old negro said: "Go way, dar! go way! *Ole Cæsar hab dress dis ere year!*"

The walls of Sebastopol have now been completely restored, and upward of three hundred houses built in place of those ruined by the bombardment. A new marble church, in the form of a pyramid, has also been erected in the churchyard of the town. The funds for the construction of this building were raised by a public subscription in the whole of Russia. The chief of the subscribers was the Princess Wassiltchykoff, who gave up for that purpose the whole of her year's pension, amounting to 15,000 rubles. A sum of 200,000 rubles in all was expended on the building. The principal monument in the church-yard is that of Prince Michael Gortchakoff. On it is the following inscription: "Here lie, among warriors, the mortal remains of the man who prevented the enemies of our country from penetrating to this spot." The tombstones of the men are all alike in shape and size, and each of them bears this inscription: "Grave of our Brothers."

Tax seen to be removed—tacks in carpets about spring day.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L. AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H. & L.

Is on the red cover of the package

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $[illegible] per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of in-[illegible]

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer at the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

GRAIN AND FLOUR MARKET.

SAN FRANCISCO, May 12

The Grain Market has been firm for a little time with ready sales for all choice wheat at an advance in price from last week.

This rise may all be speculation from abroad, or the same feeling here, that our crops may be short, but our "Grain crop" will be heavy over the State in the agregate, though in many places it may be short, the result of bad tillage and late planting.

Extended notes on the crops in another part of this Journal on this subject.

All the varieties of grain are in good demand this week, and quick sale.

The Hay crop will be good, and much grain will be cut for hay.

The Potatoe speculation has exploded, and the market glutted—all other produce in fine demand.

Retail Prices in the Fruit Market.

Our Fruit market now begins to show its rosy cheeks. Strawberries and Cherries are coming in abundantly and in large quantities—the prices of Strawberries quite low—Cherries are dropping rapidly, as the fruit ripens rapidly. Other fruit will be abundant also.

The amount of Strawberries coming to market this week has averaged 10 and 15 tons daily, some days 20 tons. Cherries, 5 and 6 tons now daily.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER"

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

SEND US SAMPLES

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY

We desire specimens in Natural History Insects, Flies, Frogs Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the PAPER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience to purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers We will therefore offer to make purchases for all who wish our services, of any of the articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and when they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

The CALIFORNIA FARMER and the American Stock Journal, $3 00

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most favorable terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold coin) and $1 extra when payments have been delayed, and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 *Clay St.*, San Francisco.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS Institution will commence on THURSDAY August 25, 1869

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of ten months, $150

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraval, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

24-3 REV. A. VARSI, S. J. President.

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Elysian Cove containing Twenty Acres of Choice Land, assorted, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood and Chicken House, etc.

A Vineyard of Five Acres, Six and Eight years from which 1,500 Gallons of Wine have been Year.

A good Orchard of 500 Trees, Five to Seven years old, all Good Varieties of Fruit. The Eleven acres of Grape Land is best for Orchard, Vineyard, or Garden Crops.

There is any quantity of "Uncle Sam's" land of the Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste this place can be made a "Little Paradise"

The House and Grounds will be sold a GREAT BARGAIN if applied for immediately, and will be sold for Less than Cost of the Buildings!

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittances to us, as there are several firms of Warren & Co. in this place, and letters will frequently miscarry unless the address is very plainly marked, obtaining the number.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO.,
California Farmer Office

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, MAY 19, 1870. NUMBER 18.

The California Farmer AND Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING BY WARREN & CO.

OFFICE—No 220 *Clay street (up stairs), below Battery*, SAN FRANCISCO

TERMS OF SUBSCRIPTION.

By mail, for one year, $5; for six months, $3. For a club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed. City subscribers, delivered by carrier, 12½ cents a number or 6½ per year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS.

San Francisco, Cal

LIST OF AGENTS.

Our Subscribers can send money BY MAIL safely (register at the Post-office, and the money will come first and sure.)

Wells, Fargo & Co., at all their Offices in the State.

Postmasters, throughout the State are requested to act as our Agents.

PARIS, April 22d, 1870.

SPRING IS WELCOME.

Spring so impatiently expected, has at last arrived, and the Farmer, like a sensible man, has turned a deaf ear to the politics surging around him, to give all his attention to his fields. The winter, not only in France, but over the entire continent has been severe, less possible in the actual intensity of cold, than in its continuance. Winter crops, on humid soils, have suffered, spring pretender is behind time—live stock is placed for a few weeks on short commons, and every description of out-door labor is in arrear. There is this consolation, that insects, and such pests of the Farm, have been effectually diminished, and on the whole, the prospects of the Agricultural interests are good

THE HORSE SHOW

The Horse Show, held in the Palace of Industry, was a fête Parisian, as well as a test of hippic progress There were 566 entries, and the total money prizes amounted to 84,000 fr. The horses were divided into five classes—those suited for Carriages of a heavy nature—for Brougham, Phaetons, etc.,—for flies, Victorias, etc.;—the fourth class comprised Saddle Horses, and the fifth, ponies. Thus the nature of the exhibition can be divined. The character of the exhibits may be described, week legs and heavy bodies, and *vice versa*. The ruling idea was to exact well—trained animals for their respective purposes, and every facility was afforded by the vastness of the building for displaying a four-in-hand, a pair, or a saddle horse—the latter having not only to go over flat course, but to take an occasional hurdle. Although two breeders from Normandy entered four, and three, score of animals, respectively, the horse dealers of the city, seized the occasion for displaying the "big gooseberries" of their stables, assured, that having obtained the "palace mark," they could command any price. The government has left no effort untried, spared no expense, to improve the breed of Horses in the Empire. Special Schools are established, for the rearing and training of the noble animal, but much remains to be accomplished. Sires are imported from England, the United States and Hungary, to serve the mares, but no harmony is observed in the selection of the latter, and detestable crosses are the consequence. It has been suggested that the appointment of a few ambulatory lecturers would do much to remedy the evil—indeed a course of clinicals at this annual show, would not be unfruitful. The *Cent Gardes*—composed of the giants of the nation, were put through their facings before the Emperor, and proved beyond a doubt that the days of heavy cavalry are over, and that the show soldiers in question, are more at home in ornamenting the grand Stair-cases of the Tuileries, than in the duties of war.

EXHIBITION OF ARMY, SCHOOLS OF AGRICULTURE.

The most notable feature presented in the National budget, is the reduction of the annual contingent of the army, by 10,000 men—so many arms left at the disposal of productive labor.—Bear in mind, that the French Army is recruited from young, and unmarried men, on attaining their majority. The grant for the support of the Veterinary Schools at Alfort, Lyons, and Toulouse, is 673,000 fr.—the number of pupils at these establishments is 586, each of whom costs the State a mean of 440*fr.* per annum. The credit demanded for Agricultural instruction and regional exhibitions, is nearly 3½ millions of francs. The 52 "Farm Schools," numbering 1,351 pupils, receive for the sustenance of each pupil, 270fr., or nearly double that allowed in previous years. The pupils are not only assisted in an outfit, but receive at the termination of their apprenticeship, a gratuity varying from 300 to 200 *fr.*—as an equivalent for their labor. The three Imperial Agricultural Colleges, at Grignon, Grand-Jouan and La Saulsaii—the latter is to be transferred to Montpellier—count 143 pupils, who defray about two-thirds of their expense, and whose yearly cost, is about on a par, with that of the Cavalry and Artillery Schools. No change has been made in the 14 Reformatory Schools—where Agriculture proves the basis of the system. The grants to the Model Dairy and Sheep Farms have been reduced by 49,000fr., owing to suppressions, while 40,000 fr. are claimed for experimental drainage. There are seven chief, and four sub Agricultural Inspectors The Depôts for Stallions, and other means for improving the breed of Horses, is allowed nearly four millions per year. As a contrast, subventions are voted to the following:—Theatres, 2; Fine Arts 2½—and Learned Societies one, millions of francs. It has been suggested, that the State, should establish Dépots for Bull, as it has done for Horses, and that the army, composed of the pick of the bone and sinew of the country, be employed, in reclaiming the waste lands, instead of leading an idle life in the barrack room.

WOOL MARKET.

France has chalked Australia and the Cape for destroying her wool market, has taken note, that the United States is likely to do the same for her cereals. But it has come to light, that Hungary, has been silently disputing the market already for grain and flour. Since 1868, Hungary exports about 30,000 tons annually of wheat to the European Markets, and 3,000 tons of flour, some of the latter finding its way to Egypt, Brazil, and La Plata. A soil naturally rich, Hungary wants but a few trunk railways and more hands. Sowing, Reaping, and Threshing Machines, are eagerly purchased, as English and American Manufacturers know. It is a curious thing, but true, that the want of Sacks, has interfered with the exportation of grain and flour from this land of Goshen. One house in Paris, supplied 17,000 at the price of two sous—one penny—per month—to be returned free and in good condition.

SCIENTIFIC STATIONS FOR EXPERIMENTS.

There are in France what are called Agronomical Stations—similar to those so numerous in Germany, where pure scientific experiments are carried on in the interests of Agriculture. Distinguished Chemists control these establishments and that at Nancy, has taken a very excellent step. There is no country where the small Farmer is more victimized by the unscrupulous conduct of agents for portable manures than France. Each vender of course, furnishes with the invoice, what purports to be an analysis of the merchandize, but which has as much connection with the article, as Monmouth with Marathon. Recently a clerk in a Manure Store, expressed regret to a customer—that their Chemist was from home—for some establishments keep a Philosopher as others do a Poet—but that he signs for all analyses in his absence! Well, a manufacturer at Nancy, has deposited all executed orders *free* of cost at the "Station"—pays for samples, selected promiscuously *from* the bags, and analyzed, and publishes the results in the local papers.

INTERNATIONAL EXHIBITION—TRIAL OF MACHINES

Next year Paris is to have a Monster Agricultural International Exhibition, and in July of the present year, rather an extensive trial of Reaping Machines in the Department of the Seine will take place under the auspices of the Society of Agriculturists. Prizes to the value of 5000fr., will be awarded, and the competition is open to the world. The German Implement Makers are resolved to dispute the field with England and America. The same Society is establishing an Agricultural Club, where visitors to next year's Exhibition can be suitably received. The Subscription is fixed at 100 fr., yearly. The Horticultural Society is to give a series of rewards, for the best cultivated Farmers' Kitchen Gardens—and we are to have quite a monster exhibition on the part of the Market Gardners of Paris—one of the most remarkable sources of the city's food supplies.

Music.

We have received a new "Grand March," composed by Walter L. Lamont and Published by A. A. Rosenberg, Esq., Music Publishers, 139 Kearney Street.

The Grand Musical Festivals at Sacramento may be put down a success—quite a furore to attend it—who did not hear the roar of the big guns announcing a grand success?

Eastern Correspondence.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND THIRTEEN

NEW YORK, April 27th, 1870.

PICTURE GALLERIES, LIBRARIES AND PARKS.

EDITOR CALIFORNIA FARMER:

The enjoyment of pictures in all wealthy communities is a sure evidence of culture and refinement. A man must not only be rich, but must be educated to give the price of a house and lot for a work of art. As prosperity has smiled upon New York, it has brought fine houses, elegant furniture, extensive libraries, spacious parks and costly galleries of pictures. Among the collections that are celebrated, none are superior and few equal to the one owned by the Hon. Augustus Belmont. Not only is this gentleman possessed of ample means and opportunity to gratify his taste, but he is probably the first connoisseur in this country. He is constantly exchanging his inferior pictures for ones of merit until his walls are hung with absolute gems of art. Mr. Belmont affords the public universally a chance to share in his enjoyment by exhibiting his gallery for some deserving charitable objects. The present opportunity is for the benefit of the "Sheltering Arms." His pictures are royally housed, not that the room is a very large one, but it is perfectly lighted, beautifully decorated and furnished with exquisite taste. Last Friday and Saturday it was crowded by the *elite* of New York, and its vicinity. His catalogue numbers 115 pictures, and when one enters the brilliant room he is confused by the attractions which fascinates his eye on every side. At last he decides upon following the numbers of the catalogue, and he finds that the names of the artists are arranged alphabetically. First are the works of Andreas Achenbach. They are "A Belgian Coast" in which the effect of moonlight is deliciously described and the roll of the water on the beach, a "Storm near Capri" that is vividly portrayed, a "Norway Landscape" in which the foliage is finely treated, and a "Westphalia Landscape" that one stands before lovelng. Before these pictures, so faithful in their style, so true in drawing and so admirable in color, one can stand for hours and then only begin to realize what a master is Achenbach. Ansdile is represented by "Highland Sheep", Bellange by a "Wounded Voltigeur", Beranger by "Baby's Bath." When one is opposite the works of Ross Bonnheur the attention is attracted and absorbed at once. "The Rendezvous de Chasse" is a splendid picture and the animals of course are perfect. Bosboom is represented by a "Church in Amsterdam"; Biers by two exquisite pictures, "The Music Lesson" and "The Widow"; Brissphy by "The Game Seller." Bouguereau's pictures always charm me at once, "The Italian Mother" and especially "The Twins" aroused my enthusiasm, and I could understand well the expressions of delight which I heard so often as the spectators would examine his wonderful flesh paintings. Calame has two fine specimens, "The Lake of Lucerne" and "Summer on the Alps"; Carolus had "Louis XV. and Mme. de Pompadour"; Castan is represented by "The Spoiled Breakfast"; Charet by "The Billet Doux" and "The Billiard Players." The last picture is a miracle of art; it is so exquisitively painted that although the canvass is a miniature and it is crowded with figures in most spirited attitudes, one needs a microscope to appreciate the work. De Camp has "A Farm Yard at Sunset"; De Haas a "Storm at Sea", "Coast at Newport" and "Port of Dover" all fine specimens of this master's style. Delaroche has one number on the catalogue but it is not a good picture to my taste. De Keyser is represented by a superb "Marino Faliero"; De Dreux by "The Hunt"; De Winter by "Coast of Normandy"; Dillens by "Paying Toll"; De Taye by the "Emigrants"; Eybel by a wonderful painted "Old Peasant Women" that will bear repeated examination; Fleury by "The Pillage of Rome", a spirited canvass that attracted universal attention; Frère by a "Peasant Woman" and a "Girl Drinking"; Fauvelet by "The Promenade"; Gallait by a graphic "Alba and Vargas" a Portrait and "Jeanne la Folle"; Geyer has a fine specimen "Baron Munchausen"; Girardet & Guillemin have four pictures; Gérome a "Diogenes" that is considered a good specimen but which does not satisfy me. Herbert, Heiligers & Hamman, have one picture each; Jacquas has two, Irwing one, Johnson & Justin Ouvrie one each; Knaus is represented by two admirable pictures, "The Village Dance" and "The Pastor and Poacher", I enjoyed both very much and returned to them often. By all odds the masterpiece of the Gallery is Baron Leys' "Faust and Marguerite", in drawing, coloring, faithfulness of detail and poetry of sentiment it is indeed a *chef d'oeuvre* of art. Lyhert has a finely painted "Dutch Town"; Madon a "Guard House"; "Old Friends" and "The Toper", excellent all Meyer is represented by a "Sunset in the Mediterranean", "Christ in Galilee"—very fine, "Shipwreck", "North Sea" and two other pictures. Meyerheim, Muller and Monfallet have each a specimen; Merle has one, "The Good Sister" which is most delicately painted; Meyer Von Bremen a "Baby Asleep" that is indeed a thing of beauty; Michelis has "Papa's Birthday", a picture that delights every one; Messonier is represented by two specimens, one "The Cavalier" that is perfect in every way, and is esteemed a remarkable specimen of this artist's work. Millet, Noyen, Omeganto, Plassan, Rosseau, Robert Schwartze, Stevens and Salentin all are represented. Schelfhout has two noticable pictures of Holland Winter Scenery; Ary Scheffer, a family portrait that I do not fancy; Troyon, Ten Kate, Tiedman, Toulmouch, Vander Metin, Verschaur, Verlat Verveer, Van Der Berghe, are all in the number of artists represented. Van Hove has a carefully painted "Dutch Tavern"; Horace Vernet has a small picture, the "Storming of Constantine by Lamoricière" that is painfully described, the dead and the dying particularly are most powerfully painted. Willems has three pictures, Wiessenbruch one, and Zelm one.

I have spoken of the collection in detail because I know two or three of your readers who will enjoy it.

Although I am tolerably familiar with the world of modern artists, I do not pretend to criticise the Belmont Gallery, because it would take too much time, and a more careful examination of the pictures than I am able to give. I simply name those which please me without scrutiny. I have been able to devote only a couple of hours in looking at them while a months time could be profitably employed in comparing them and studying the effects for which each master is distinguished. A picture like a poem needs to be studied to be even understood. The drawing, the coloring, the details and the subject itself can only be comprehended after appreciative and careful examination. I cannot understand how people of otherwise good sense can pretend to an acquaintance with the characteristics of ancient and modern art after six months spent in Europe. The Belmont Gallery I only speak of, heatily, acknowledging its rare possessions, which have manifestly been collected by a person of the highest intelligence in art matters as one of the rare "sights of New York."

M. A. S.

SILK WORMS AT NEVADA.

Those who remember the handsome collection of cocoons, worms, and other material of the sericulturist, which was exhibited at the State Fair last Fall, and again at the Mechanics Fair by Ed. Muller, Esq., will be pleased to learn of his success now. A sketch of his workings we clip from the *National Gazette* of Nevada, of the 4th of May.

The *Gazette* says:

The many experiments made by Ed. Muller in raising silkworms and mulberry trees, for two years past, have confirmed him in the belief of the success of this industry here in the foothills. The practical tests he has made, and the success that has followed, would seem to leave no further doubt as to whether the climate and soil are adapted to the growth of the mulberry and the profitable raising of the silkworm Muller has now about 20,000 worms hatched. These he is feeding on the leaves from his two-year old seedling mulberry trees, of which he has 20,000 now growing in the nursery, at the corner of Commercial streets. From experiments made last season, Mr. Muller is confident that the early hatched worms will do the best, as the temperature is more uniform than in June and July. The heat during the day is from 10 to 20 degrees less than it will be in a month hence, while the nights are but a trifle colder than in the midst of summer Extremes of heat and cold, and lack of ventilation are fatal to the worm. As an evidence of the hardiness of the worm at this time of the year, we notice Muller has hundreds of them on his mulberry trees, hatched in the open air. The principal losses incurred by Muller last season were among his worms hatched during the summer heats, those that came out early in May having been vigorous and healthy. Muller intends to raise about 50,000 worms this year. In his cocoonery he is building racks eight and ten feet in length, five feet high and two feet wide. The shelves on these racks are made by running strips of lath, with the narrow edge up, across, or lengthwise of the racks or stands The latter are placed about an inch apart; papers are to be spread over them, and on these the worms will be hatched and fed. The distance between the laths will afford perfect ventilation, and be much better than placing the worms on boards. With the experience Mr. Muller has had, it looks as if he could avoid, in the future, the difficulties he has met with. We advise all persons who wish to see a cocoonery and the *modus operandi* of raising silk worms, to visit Muller's plantation. They will find Mr. M. ready and happy to give them all the information he can respecting what must eventually be one of our leading industries.

SEED POTATOES.

A correspondent of the *Practical Farmer* gives the following as his experience in selecting and planting potatoes:

"In the spring of 1868 I purchased one pound of Early Rose, which cut into forty-eight single eyes, and planted in the garden with no extra cultivation, yield me 82 pounds of fine large potatoes. I found them to keep remarkably well through the winter, showing no signs of rot. In the early part of May, 1869, I planted this product in the field in rows, about one foot apart in the row, and in August took up forty bushels of fine, clean good shaped potatoes, which are keeping well and show no signs of rot. In taking them up I had them placed at once in the cart (the pickers following the plow) and stored in the cellar, without sunburning, which I think is one of the causes of rot. In preparing the ground for potatoes I always manure the ground thoroughly and plough the manure in and harrow well, and mark out the rows three feet apart. I prefer this to the old plan of manuring in the row, as the contact of the manure with the potato has a tendency to rot in the ground.

"In the spring of 1869 I planted one pound of Climax, which yielded me over forty-five pounds of fine, handsome potatoes; also at the same time, one pound of Breese's Prolific, from which I obtained only twenty-five pounds. I gave these two last varieties no extra cultivation—my object not being to raise an extra crop, but to test what they would do under fair cultivation. Another year's trial will be required to decide on their merits as field crops. I also planted and cultivated in the same manner, four pounds of Worcester, or Reilly potatoes, from which I obtained 2½ bushels.—These are not a large, but a remarkably fine eating potato. I cooked a few of them when about half grown, and they were like little bags of meal.—Also planted at the same time four pounds of Vandever. From these I yield about 2½ bushels of fair potatoes, but they did not come up to my expectations.

"For a late keeping potato I have found none superior to the Pinkeye Russycoat. While most other varieties have sprouted and shriveled in the spring, this one still remains hard and firm. It yields well, always turns out of the ground clean—and in five years that I cultivated it, I have never seen a sign of rot. I find this variety to yield much better from cut sets—unless in a very dry season they grow on until the frost kills the tops.

"The Harrisons gave me a remarkably fine yield last year; but as I did not measure the land planted, I am not able to give the product per bushel. Some of my neighbors complain of the Harrison rotting; so far there is no rot in mine which I attribute to their being taken into the cellar as soon as dug. I would recommend the last named varieties for late planting, and the Early Rose for early use."

RAIN IN MAY.

A pretty shower was sent this morning just before noon at Folsom; it came as a refreshing to the thirsty plants, and the parched earth wherever it fell. We were visiting some vineyards and gardens there, and noted quickly the feelings it created. Each recipient of this blessing speaking only for his own interest—not the general interest.

Several persons who had hay in the field were fearful of injury to their hay, some who had strawberries and cherries ripe were afraid their fruit would be spoiled—none thinking of any good for others.

We met another who had a large field of hay down that heavy rain would injure, and large fields of grain standing that rain would benefit, and he was reticent, he appeared to us like a politician on the fence, waiting to see the result before he could decide what to say or how to act

We do not think the rain will do any injury to the hay crop, as it will soon dry off and be taken up by the hay or by the atmosphere, and this rain was not heavy but like an April shower, but many kinds of vegetation and even grain may be benefited. Heavy showers fell in this city, at Sacramento, Stockton and at many other places; quite a refreshing rain, making the air redolent with a purifying breath.

Our own opinion is that wherever the soil is well cultivated in orchard or vineyard or garden, there will always be moisture enough drawn up from below so that nothing can suffer, well subdued soil can always be cultivated in dry weather and plowing and cultivating even in the dryest weather will produce moisture.

The Northern District is as we learn making their preparations for their coming Fair this Autumn. There is no reason why that District should not have a prosperous Fair.

Fruit Boxes and the Fruit Business next week.

Several Letters received too late for this week will appear next issue.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NO EIGHTEEN.

ALKALIS—SALTS—ASHES—LIME.

I do not know a rood of our country's surface so rich in all the materials which enter into the production of the Grains, Grasses, Fruits, and Vegetables, which are the objects and rewards of cultivation, that it could not be improved by the application of fertilizers; if there be such, I heartily congratulate the owners, and advise them not to sell. Nor do I believe that there are many acres so fertile that they would not produce more Indian Corn, more Hemp, more Cotton, and more of whatever may be their appropriate staple, if judiciously fertilized. If there be farms or fields originally so good that manure would not increase their yield, I am confident that the first half-dozen crops will have taken that conceit out of them.—Prairies and river-bottoms may yield ever so bounteously; but that very luxuriance of growth insures their gradual exhaustion of certain elements of crops, which must needs be replaced or their product will dwindle. Whoever has sold a thousand bushels of grain, or its equivalent in meat, from his farm, has thereby impoverished that farm unless he has applied something that balances its loss. "I perceive that virtue has gone out of me," observed the Saviour, because the hem of his garment had been touched; and every field that had been cropped might make a similar report whatever its annual loss by abstraction has not been balanced by some kind of fertilizer. The farmer who grows the largest crops is the most merciless exhauster of the soil, unless he balances his annual drafts (as good farmers rarely fail to do) by at least equal re-enforcements of the productive capacity of his fields.

The good farmer begins by inquiring, "Wherein was my soil originally deficient?" I judge that my gravelly hill-sides would reward the application of two hundred loads (or tons) of pure clay per acre, as I think the clay flats which border Lake Champlain would pay for a like application of sand or fine gravel where that material is found in convenient proximity; and yet I know very well that, on at least three-fourths of our country's area, such application would cost far more than it would be worth. Every farmer must act on his knowledge of his soil and its peculiar needs, and not blindly follow the dictum of another. Yet I know few farms which, were they mine, I would not consider enhanced in value by a vigorous application of some alkaline substance—Lime, Salt, Ashes, or some one of the cheaper Nitrates. I should be very glad to apply one thousand bushels of good house-made, hard-wood Ashes to my twenty acres of arable upland, if I could buy them delivered, at twenty-five cents per bushel: but they are not to be had. I doubt that there are a hundred acres of warm, dry, gravelly or sandy soil east of the Alleghanies that would not amply reward a similar application. But Ashes in quantity are not to be had, since no good farmer sells them, and Coal is the chief fuel of cities and villages. The Marls of New Jersey I judge full equal in average value to Ashes which have been nearly deprived of their potash, by leaching, but not quite half equal, bushel for bushel, to unleached Ashes. I judge that average Marl is worth 10 cents per bushel where Ashes may be had for 25. But Marl is found only in a few localities, and a material worth but 10 cents per bushel will not bear transportation beyond 40 miles by land or 200 by water. Salt is only found or made at a few points, and is too dear for general use as a fertilizer. Where the refuse product of Salt Works can be cheaply bought, good farmers will eagerly compete for it, if their lands at all resemble mine. I judge the ton of Potash I ordered fifteen years ago from Syracuse, paying $50 and transportation, was the cheapest fertilizer I ever bought. It was so impregnated with Salt (from the boiling over of the salt kettles into the ashes) as to be worthless for other than Agricultural purposes; but I mixed it with a large pile of Muck that I had recently dug, and, six or eight months thereafter, applied the product to a very poor, gravelly hill side which I had just broken up; and the immediate result was a noble crop of Corn. That hill side has not yet forgotten the application.

—If I should try to explain just how and why Lime is a fertilizer, I should probably fail: and I am well assured that liming has in some cases been overdone; yet I think most observers will concur in my statement that *any region which has been limited year after year produces crops of noticeable excellence.* I cite as examples Chester and Lancaster Counties, Pennsylvania, with Stark and adjacent counties of Ohio. Possibly, results equally gratifying might be secured by applying some other substance; I only *know* that frequent-limed lands are generally good lands, as their crops do testify. I heartily wish that the flat clay intervales of Western Vermont could have a fair trial of the virtues of liming. I should expect to see them thereby rendered friable and arable; no longer changing speedily from the semblance of tar to that of brick, but readily plowed and tilled, and yielding liberally of Grain as well as Grass.—I am confident that most farms in our country will pay for liming to the extent of fifty bushels per acre where the cost of quick lime does not exceed ten cents per bushel; and most farmers by taking, hot from the kiln, the refuse lime that is deemed unfit for building purposes, can obtain it cheaper than that.

I wish some farmer who gives constant personal attention to his work—as I cannot—would make some careful tests of the practical value of alkalis For instance; the abundance and tenacity of on common sorrel is supposed to indicate an acid condition of the soil; and all who have tried know that sorrel is hard to kill by cultivation. I suggest that whoever is troubled with it should cover two square rods with one bushel of quick-lime just after plowing and harrowing this Spring; then apply another bushel to four square rods adjacent; then make similar applications of ashes to two and *four* square rods respectively, taking careful note of the boundaries of each patch, and leaving the rest of the field destitute of either application. I will not anticipate the result: more than one year may be required to evolve it: but I am confident that a few such experiments would supply data whereof I am in need: and there are doubtless others whose ignorance is nearly equal to mine.

HOLES IN THE POCKET-BOOK.

We find the following capital advice from a Virginian, let all profit by it.—ED. FARMER.]

Farmers, mind well that you keep no holes in your pocket-books. If you do, be sure all the "tin" will slip through and be lost, Let us see how some men make holes in their pocket-books:

If you plow shallow, plant inferior seed, and then suffer what comes up to run to grass or fall a prey to insects, you make a hole in your pocket book.

If you turn out your stock upon the common to mix with inferior breeds, or allow them to stray or be stolen, be sure you'll have a hole in your pocket book.

If you purchase abroad what you might easily and cheaply make at home, or grow at home, such things will make holes in your pocket-book.

If you keep bad fences or bad gates, and your neighbor's stock break in upon your growing crops, and then worry or injure them with dogs, and by so doing turn a friend into an enemy, you make a sad rent in your pocket book.

If you spend your time and money at election or stores, drinking and carousing, when you ought to be at work, be assured there is a big hole away down deep in your pocket-book.

If you leave your tools to be thrown about here and there, exposed to all sorts of weather, be sure they will rot and rust and make holes it your pocket-book.

Land undrained and unmanured, stock poorly fed or neglected, orchards left to grow at will or be pruned by cattle, idleness, sloth, tobacco, whiskey, worthless dogs, fine clothes—all these make sad, sad holes in the pocket-book, the memory of which will not be pleasant when the evening shadows come, and you find that you have done nothing for a rainy day. B. W. JONES.

Cottage Home, Surry, Va.

CROPS AND PROSPECTS IN THE NORTH-WEST.

The planting season is rapidly approaching in the States of the Northwest, and the Chicago *Republican* intimates that there will be a decided change in the character of the crops cultivated by the farmers of that section. It says:

"The granaries are still full of the products of last year's harvest, held back for a price that will at least cover the cost of production. A comparatively small advance would relieve the agricultural demand for funds, revive the trade of the merchant, and crowd all the avenues to the seaboard with profitable freight. Farm products are embayed, and the producers of wealth are, many of them, stranded, with abundant means, if they could be realized or made available.

"These things have sunk deep into the mind of the producer, and will enforce upon him a greater diversity of farm production. The coming season will witness a marked change in Western agriculture from the years preceding. We shall see a much less breadth of wheat sown, and a great deal more corn, oats, barley, and crops which may be classed as special. Stock, with the exception, perhaps, of sheep, will be everywhere largely increased. More attention will be given to the cultivation of clover and the tame grasses."

More scientific methods of farming will also be adopted, in order to restore the soil from the effects of long continued cropping with an effort to return the elements exhausted from it. In the Northwest States the heavy snows have been very favorable to crops generally, and will insure a large yield of fruit, if the prospect is not nipped by untimely frosts. The present prospects of a bounteous harvest are all flattering.

PREMIUMS.

'THE EARLY ROSE POTATOE.

The wonderful celebrity which is now being attained by the unprecedented excellence of the "Early Rose Potatoe," its great productiveness beyond that of any other potatoe known, its early maturity (7, 8 and 9 weeks) surpassing all others, and its great superiority in *quality*, induces us to try to spread its culture as widely as possible.

We therefore will now offer to every *new subscriber* to the CALIFORNIA FARMER, from the commencement of our new Volume, Four pounds of the "Early Rose Potatoe," mailed to them *free of cost*, as a PREMIUM for 1870. This will give them seed for another year, equal to 200 to 300 lbs.

P. S. All new subscribers to our present Volume who kindly sent their names before this, if they will send us word they will see this seed they shall have the parcel mailed to them free.

LICE ON CHICKENS.

Sprigs of cedar scattered about the fowl house will relieve them of this awful pest. Tar in the chicken trough is a preventive of disease.

Best sugar is exempt from taxation in Wisconsin.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1863, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 21 2-10 per cent. For life-sustaining properties to all stock are equal to sudden changes of weather or over-driving I are no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving the quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase the bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest food in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of grain.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

WARREN & CO.

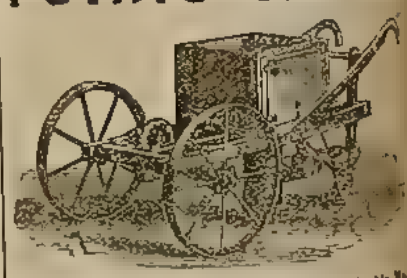
TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such dimensions as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over the ground that can be plowed

No intelligent farmer can ... that an implement with which one man can, with the aid of a horse, plant six acres of potatoes in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Instrument, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office

"WHAT'S IN A BOTTLE!"

(From the French of ANTONY REAL.)

CONTINUED FROM No. 15.

V. ABSINTHE.

The man who drinks absinthe is an object of compassion, because the only means of restoring the faculties of his heart and of his brain would be a return to the use of wine,—and alas! he is tired of wine.

One day wine no longer contented him—he sought intoxication in liquors, in absinthe. From that time forth mirth departed from him, his spirited sallies gave place to a fixed idea—he became moody, taciturn; he preferred solitude to the assemblage of boon companions. No more did the blue sky reflect itself in his eyes, no longer did his pulse respond to the whispers of the summer breeze. Perpetual dejection casts its leaden shadow upon him, and he fell out of the ranks of society. Life hung heavily upon him, and ere long he could only support its burden in the midst of a stupid torpor. Little by little his wits were blunted, his forehead stiffened, his glance lost its lustre, and his hair turned grey. A gloomy picture—the decrepitude of youth!

In this condition man no longer possesses either the moral or the physical sense; his very palate is deadened, he knows not when he eats nor when he drinks. He is no longer living, he is dead.

True, this depth of degradation is not reached at a single bound. Poison acts slowly upon certain natures, and many a thoughtless drinker says "Absinthe does no harm, look at such a one, he is eighty-four years old, and has never passed a day without taking absinthe." Yes, many delude themselves by citing these exceptional instances, and while still young, with anxious minds and quivering frames, present to society the spectacle of their terrible debasement.

What infatuation then impels thee, thoughtless drinker, thus to slay thy body and thy mind? If absinthe has not yet undermined thy health, if it has not yet muddled thy faculties, have a care lest it carry thee to the point of imbecility, or at least, lest it cause thee one day to merit that title the most withering, the most disgraceful of which I have ever heard; that of *the drunkard*.

VI. WHAT'S IN A BOTTLE OF TOKAY?

Let us get acquainted now with the contents of another bottle, a liquid quite different from the former. The mere thinking of the golden grape-juice of Tokay will drive off the disagreeable impression which the description of the absinthe bottle has made on us.

It was in 1805. Napoleon had been victorious at Austerlitz. France, triumphant and irresistible, was in position to impose her own terms on Russia, Prussia and Austria. For some time past the plenipotentiaries had been assembled at Presburg.

M. de Talleyrand represented France, and the Prince of Lichtenstein and Count Giulay for Austria. They were on the point of signing the treaty by which Austria consented to lose a population of three millions of souls, and a revenue of fourteen millions of florins. It was further agreed by a secret clause that Austria should, within six months, pay to France forty millions of francs.—"The figure," Mr. Talleyrand was heard to observe, "is extremely low for the redemption of the contributions imposed upon the conquered provinces; I would therefore propose—"

"What more?" exclaimed, with one voice, the two noble representatives of Austria.

"Do not be alarmed; my demand will not disturb your finance, or diminish your provinces."

"What is it, then?"

"What I desire is for myself,—and for you also, if you ever do me the honor to allow me to receive you at Paris."

"Pray, explain," repeated the impatient diplomats.

"Well, I ask for a secret article, stipulating that before the treaty is signed, I shall receive a diplomatic present of a hundred bottles of wine of Tokay.

The new clause was inserted without opposition. It was only twenty-five days later that Mr. de Talleyrand set his name to the treaty. The illustrious negotiator, as distrustful as appreciative, insisted upon the delivery of the wine as a condition precedent. During these twenty-five days France was somewhat agitated by the expectation, somewhat delayed, of news of the treaty of Presburg, as the fruit of the victory at Austerlitz. Who would have thought that, at that moment, the peace of Europe depended on some bottles of Tokay!

Sixty-five years have since elapsed, and at this day every wine merchant can regale his friends with a bottle of the wine then reserved for the great men of the world.

LOST MAILS.

Since the inauguration of the Rail Roads, our mails come in quick time to former rates, 7, 8, 9, and 10 days from Eastern States, and a brief time from Europe. But with all this speed "haste makes waste," proves true in many cases, for we often find papers that seem to have been mailed for weeks, some of a month old arriving, as if they had stopped on the way to rest, and if it is so coming, may it not be so going. If our subscribers find it so, or if our Exchanges find numbers missing, please let us know, and we will replace. By and by neither snow nor delays will impede.

SEEDLING STRAWBERRIES.

"Since the introduction of Hovey's seedling, this department of strawberry culture has had new life and vigor infused into it, and has resulted in affording high gratification to those engaged in it, and proved of decided benefit to our country.

This fruit, is so soon and so easily raised from seed, that the process invites to a very attract re series of experiments. Almost any one can experiment in a small way; and the person who shall produce a strawberry of the size of Hovey's Seedling, or of the size and productiveness of McAvoy's Extra Red, combined with the exquisite flavor of Burr's New Pine, will be a benefactor.

Perhaps the easiest way is to select the largest ripe berries of the best clons of pistillates, raised in close proximity to one of the best staminates, and crush them in a bed of pure sand, mix them, and let the seeds dry and ripen for two weeks or a month; then sow them in light soil, in a partially shaded spot in the garden, carefully water, and in winter protect them with a covering of straw; in spring transplant them, one plant in a place two feet apart; carefully remove all runners until the plants have borne; select the best for further trial, and throw the rest away. A better way, if convenient, is to sow the seeds and sand in a cold frame, provided in a northen exposure, and transplant as above directed."

We hope the above plan which we copy from "Pardee," will be tried by the Strawberry growers of California.—[ED. F.

WEATHER SUITABLE FOR SULPHURING.

The following plan we take from the Sulphur Cure, the Book alluded to in our last, and from which we give the article on Mildew in our Horticultural Colum.

Only in the greatest emergency would it do to sulphur vines while it rained. I know it has been recommended, and is even practiced in the colder grape regions of Europe, to perform the operation early in the day, in order that the dew on the lower side of the leaves shall cause the powder to stick there; but such is by no means the practice in those hotter countries where the disease is strong. The sulphur, being insoluble in water, acts on the disease only in the form of vapor, and it will not turn to vapor except in a heat equal to about 68° Fahrenheit. There is no use in putting it on unless the thermometer shows that temperature to exist in the vineyard at the time it is put on, or afterward and before it is blown or washed away by wind or rain. Fortunately, a greater heat is required to bring the mildew into life than to produce the vapor which destroys it. As much as two or three hours at least of the right temperature are needed to make the remedy take effect; and, if a considerable rain should fall before such time has elapsed, the work must be done over again within two or three days afterward.—After the leaves have grown large enough to shelter the fruit, and to some extent each other, as in late June, such a renewal becomes less important.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c., and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

WARREN & CO.,

Farmer Office.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plant

(The Large Bell Variety,)

Ramie Seed, Fresh,

WATERMELON, CANTELOUPE,

AND

MUSKMELLON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

MIXED LAWN-GRASS, ETC:

For sale at the "FARMER" OFFICE.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting

We have them put up in Packages of ONE DOLLAR EACH, MAILED free to purchasers.

WARREN & Co., FARMER OFFICE,

320 Clay Street

The California Farmer.

SAN FRANCISCO:
THURSDAY EVENING MAY 19 th., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the Farmer Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING:

The charges for advertising in the California Farmer, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the Farmer with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our Journal, to which we would direct their special attention.]

☞ Special attention should be given by our Farmers to the Essay of Horace Greely, under our Agricultural head.

We desire of Farmers to note what Mr. Greely says of the value of Gypsum to the Soil and Crops of every kind, also to the all importance of deep plowing and most thorough cultivation.

Thorough cultivation with deep plowing, is ably handled by Mr. Greely, and we hope his council will be heeded by our Farmers here.

We call special attention to the article in our columns upon Coal Gas Tar, as very important to our Farmers who must look to the subject of feeding the soil.

The sketch of our esteemed Correspondent, upon the Art Exhibition of Hon. Augustus Belmont, will be read with much interest, these letters of "M. A. S." are always eagerly sought for and read as eagerly.

The Agricultural College Letter, and Articles of the Constitution, should be read by our Farmers. Their own interests are most intimately identified with it.

Our "European Letter."

Our readers will find our European Letter of particular moment and value to them, showing our Grain Market abroad, and how France values the matter. Our Managers of Fairs, and our public men, our Regents, of our Agricultural College, should note what France is doing for Agriculture.

Our valued Correspondent, "M. A. S.," of New York has another Letter in the Farmer this week. We hope our Correspondent will reply to the wishes of his many and warm friends here, and not forget we are looking for him every train of cars, among the many distinguished friends that are now daily coming over the Railway to our sunny land.

EXTRA NUMBERS.

We make it one of our plans in the dissemination of such agricultural information as we deem of particular importance and value, to issue and send out hundred or thousands of Extra Copies of our Journal, and send them broadcast, freighted as we hope with seeds of truth that may accomplish great good.

Of such editions we mail copies to active, prominent and influential men everywhere, and to Postmasters, ask them each and all to *read* and pass to others that the greatest good may be done.

The present number of the Farmer contains much that we trust will prove of value to the reader, and we hope many who read will co-operate with us in our work, and extend the influence of our Journal.

Those persons who wish to give correct views of our State and its resources, a correct market report of all the products, should send the Farmer regularly to their friends.

Look to your Orchard Trees.

Our orchardists are too neglectful of their orchard trees, many are not pruned at all, the whole strength allowed to go to making wood instead of fruit. Fruit growers should *summer-prune* their fruit trees as well as their grapevines—shorten all bearing branches—*thumb prune* all the young wood before the bearing spurs.

Look to your Vineyards.

Now is the time to watch the vineyards and be prepared to ward off the attack of the "Mildew," "Thrip," or any evil to the vine; also to watch its growth, and nip out all the lateral branches above the fruit; the judicious pruning, enlarges the crop, and secures a better quality also.

SEASONS, CROPS, ETC., ETC.

A little dash of rain for a refreshing looks as the rain drops hang on the leaves and blades of grain, like diamonds, and coming like tear drops shed for mans perverseness and ingratitude, and his continual complaining, instead of a song of gratitude and thankfulness for a greater amount of good than he deserves

The Season for all our crops has been as a whole very favorable, and those who will carefully observe, will find it so, and the many and useless as well as frivolous reports will all pass away like chaff before the wind, while the solid results of a wise and constant effort on the part of intelligent farmers will show a good and a large harvest for 1870.

We herewith annex a few reports of the condition of the Crops from various sources, to show that what the Journal has stated will be found the correct condition of things.

In our intercourse with men who talk about loss of crops, and failing harvests, we have never yet found a solitary instance where crops have failed, save when the tillage was late and poor, and the planting late also, and when all the wise and proper rules of Season and system was wrong.

We find it as a general rule also that these reports come from hearsay, not examination, and we doubt very much if our City Commercial Reporters ever have the time, or take it, to go and see for themselves in order to substantiate their reports. We go and see for ourselves Herewith we give some of the reports.

NEWS OF CROPS DOWN SOUTH.

We clip from the Sunday Los Angeles *News* the following, which shows that crops are *not lost there*, but good wherever they have had due attention. That paper says:

"Advices indicate that in the region of El Monte and Los Nietos, where the lands are moist, good crops are anticipated. The same expectations are indulged by those whose lands can be irrigated. From non-irrigable lands short crops may be anticipated—short when compared with the enormous yield which alone is considered by our farmers a good crop. Deep plowing, a thorough pulverization of the soil and diversified culture is what needs to be practised by our farmers. The two former will obviate, in a great measure, the apparent necessity for our maxium yearly rain fall, and the latter will enable the farmer to make money from one portion of his crop if another fails. Of the grasses, our personal observation leads us to conclude that upon the plains it is a comparative failure. It is short and under the burning sun will rapidly dry up and disappear. Along the foot-hills and in the mountain ranges the grazing is good. The stock raisers with wise forethought, are keeping their stock, sheep, cattle and horses, upon the plains as long as possible. In the mean time the grass along the rolling lands and mountain sides is coming forward finely, and when the plains become dry an abundance of fresh food will await the herds. This we regard as a fair statement of the situation. The talk in the upper counties of the danger of starving cattle in Los Angeles is all gammon and is made only in the interests of those desirous of "killing" the price of meat.

In addition to this we say that the moment good cultivation is practiced the irrigation plan will cease. In conversation with a large cultivator, directly from this section, he says emphatically no crops are lost where there has been good cultivation and due attention.

NEWS FROM SUTTER COUNTY.

A large cultivator from the banks of the Sacramento, near Nicolaus, says: Our crops look well. All crops put in early and on well tilled land looks well and do not suffer. It is only late planting, shallow and poor culture that has caused this hue and cry about poor crops—the crops properly cared for are good, NEVER BETTER

FALSE NEWS.

There has been a great wrong done by the press of this State in reiterating the cry of *Drouth* and lost crops. Persons of good sense should rebuke those journals and all who who reiterate it, for it is a SLANDER upon the reputation of our State. Every penny a liner and every petty commission merchant, neither of whom have seen a grain-field this year or know of what they speak, talk about the "loss of crops" as if they were assured that it was so, when it is mere hear say, and these informers of the press know no more of the crops, their condition, or of agriculture itself than at turkey gobler knows of the Greek language. Our State suffers greatly from such news and this kind always flies fastest.

A late publication of a large sheet of paper, is used by new men, in the Agricultural interest, pretending to be to benefit Emigrants and enlighten everybody abroad upon the "Resources of California," and announced as a valuable publication of "a hundred thousand strong," is a most unfortunate speculation for our State.

Many of the statements are gravely erroneous, and will tend to the injury of our State. We feel that we are called upon to speak plainly when a paper is sent abroad purporting to represent the agricultural interests and the crops when it only injures the cause and the State also.

We regret thus to speak, but duty compels us to do so, for when men who knows nothing practically of agriculture, send out errors, *we* will send out a remedy for their evil. Those whose names are appended to that doctrine of errors had better have kept on their usual course, the one to Politics the other to the Race Course there they may excel.

We shall in our next show up some *few* of their errors, were we to give them all we should have to publish a *Blanket Sheet*, also, We deeply regret that such errors have been sentforth, we hope, however, only a few of the "hundred thousand" have crossed the line of our State. A bundle of them came to our office through the mail, and, as we suppose for examination and notice—we shall do both fairly and truly.

IRRIGATION VERSUS CULTIVATION.

For some time past the Journals of our city, especially the *Alta* and *Bulletin* have had quite a warm debate upon the two all important theories named above, for nothing could be more important for our farmer to know than a proper system of culture in a dry country like ours.

To disputants like the writers in these two journals named, which seems to know but very little practically be their arguments, the battle between them appears to us like the "Kilkenny Cats."

We esteem the *Alta* in its advocacy of Irrigation very fallacious and wrong and destined to work injury to our State with people abroad as it induces them to believe we cannot raise a crop here without irrigation, when the very reverse is the real truth. Many of the statements recently made in the *Alta*, will, in our opinion do a serious injury abroad where that paper is not known.

The *Bulletin* takes a wiser and truer view of this question, and in the discussion has all the honor of the fight, for it is on the right side by advocating Cultivation instead of Irrigation, and has good practical proof that this is the system for a dry county.

It is a serious matter for a public journal to advocate a new doctrine so erroneous as Irrigation, all the history of the past is against it. there has been millions of dollars wasted for windmills and watering troughs, as many can well remember them, in the early years upon our orchards, vineyards and gardens almost everywhere, now they are done away with, and more cultivation of the soil, is found far better than water poured on the surface.

We have been much surprised to read the several articles in the *Alta*, advocating a system that is so erroneous in a climate like ours. If the Agricultural editor of the *Alta* will take the trouble to examine the system of European Culture, deep cultivation as a means of creating moisture, it would never again advance the miserable doctrine of Irrigation in our State.

The *Bulletin* has the right side of the question, and is sustained by the good results all round us of deep culture, besides the fact, that our best cultivators everywhere advocate Cultivation and not Irrigation.

The evidences we give in this number from various sources we thing is enough to convince any one of the fallacy of the erroneous doctrines of the *Alta*, or of any fears of our crops from failure, even the famous Sacramento *Union* begins to own up to the misrepresentations of the condition of our crops.

We do not design further to discuss the matter only to copy an article we find in the *Bulletin* of last Saturday with a letter from W. R. Olden, Esq., of Anaheim, which is very pointed on the cause of the failure of crops by reason of shallow plowing.

It will be seen that Mr. Olden says his soil is in splendid order, that means, not the *hen-scratched* system named, but well cultivated; and he also pointedly approves the doctrine of subsoiling and deep plowing in order to *produce moisture*. Mr. O. is right. Deep cultivation will always produce moisture.

That irrigation is not indispensable to the successful cultivation of the lands in Los Angeles county, is a fact which has been clearly proven by the experience of many intelligent farmers. The fogs and subterranean water which rests in these valleys gives, if the soil be kept loose and pulverised, more than sufficient supply of moisture for the raising of crops. Recent settlers north of Anaheim, fearing the effects of the drouth, proposed to construct a ditch to convey water from the Santa Anna river, to irrigate their lands. Several old residents refused to co operate in the movement, and we publish an extract from the letter of one, relating to the condition of the crops this year, which has been so unusually dry, and giving his opinion on the subject of irrigation. The writer is W. R. Olden, and his letter is dated Anaheim, May 6th:

"Farmers in the Northern part of this State are hard to please about rain; if we had only one-third of what they have, there would be no complaint here, we have only had a few light showers that fell at long intervals, and did not penetrate the ground, and were soon dried out by the North winds that followed. The fact is, the farmers don't deserve to have crops; they plow from one to three inches deep and then *trust to luck*. With abundant rains they make a crop, but let a short interval of dry weather ensue, and their "hen scratched" fields soon dry up. The case is the same here. Hardly any one does any more than scratch the soil, and, of course, excepting in a few moist spots, the grain is dried up and dead.

My potatoes are growing splendidly and promise a good yield. Part of my barley looks very well; that part which was sown on dry ground does not look so well. The flax is growing well and looks remarkably prosperous, stands the dry weather astonishingly; it was sown at least one month too late, but as it is I hope to get a fair crop of seed—but it will be too short for the fibre to be much, unless we should have rain, which I do not expect.

I hope to make a fair crop of both corn and beans; the former I have planted and the latter I am planting now. The soil is moist and in splendid order, and if the fogs don't dissapoint me as well as the rain, I shall continue to plant them for three weeks to come, and intend to subsoil all the land I plant hereafter. I place my dependance entirely upon the natural moisture.

The vineyards look splendidly, and none of them, or very few, have been irrigated; they don't require it, deep rooted plants find plenty of moisture in this section of the country. Irrigation on a large scale is a humbug, deep plowing is all that is required. If I had been here two months sooner I would have had full crops of everything. I am, however, confident of a fine return.

VINEYARDS AT FOLSOM.

This part of our State is becoming valuable in the wine interest, the Red Lands of that region proving most excellent soil for the Vine.

The Natoma Vineyard, that of B. N. Bugbee Esq., is the largest and most flourishing and prosperous, being very extensive, embracing in all the Vineyards, over 100 acres, containing 50 or 60,000 Vines in bearing order, of the very best varieties of grapes known. There are two principal Vineyards, the Natoma and the Durco, but all the wines are known as the Natoma Wines.

Mr. B., is annually enlarging his Vineyard by adding each year 20 to 25,000 vines of such kinds as prove the best for wine, it being his determination to establish a reputation for his wines both at home and abroad, that shall be worthy of having.

Mr. Bugbee has greatly enlarged his Vineyards and surroundings, and replaced the buildings destroyed by fire,—and has in his business the best implements, machinery, presses, vats, casks, etc., etc., that can be produced. He erected at his place the first new Patent Distilling Apparatus, recently invented, which expells the *fusil oil*, and all his other materials for his business are of the most approved order.

Mr. Bugbee purchased the large building that was erected for Coover and Stocktons, Flouring Mill at Folsom, and has converted that into a Warehouse and Cellar for his wines, where we saw and sampled his excellent wines on this visit.—His present stock on hand is about 40,000 gallons, the cellars under his Warehouse are 75 by 125, clean, airy and excellent.

We tested Red and White wines of several ages, made from different kinds of grapes, also his Port wine, his Brandy, and Sherry, all of which samples were excellent, and several of them would astonish the Vintagers of Europe, by their superior quality. We also tasted his Champagne—richer and sweeter than imported wines, but very fine; his brand of Champagne is a singular one, being as follows.

Syrrcus
or
Priente Cuvee
de
Anotan.

This curious title for a wine will puzzle many persons, as to its derivation—how many can give it to us, we are amused and pleased at the authors ideas for a name.

Mr. Bugbee deserves great credit for what he has done to advance the wine interest of our State. Of the further particulars of his fine Vineyard and Home we shall again speak, as Mr. Bugbee was absent at our present visit.

There are several other fine Vineyards near by, which we had no time to visit, but shall do so at an early day—they are, Messrs, Oswald Brothers, Wm. Waldron, Henry Meithi, Henry Miller, I Gelsburg, J. Bruger, Joseph Williamson and Mr. Knight, these are all prosperous Vineyards, which we hope soon to visit.

We visited the Vineyard of Mr. F. Holtzinger, only about 4,000 Vines from three to five years old, but showing a remarkable crop of grapes set, the Vineyard was in fine order and well pruned. If care is now had by "thumb pruning," the crop must be heavy and fruit fine. Mr. H., made some 600 gallons of wine last year, his Orchard trees need cultivation and mulching, we noted some few stands of Hops of remarkable growth. Irrigation is but little needed here as the red land is mellow and moist when cultivated.

We visited the Gardens of Arnold Schlingburgh and Brother, some half mile below Folsom, here is an Orchard Vinyard, Small Fruit Garden, and Vegetables of about 30 acres in all, and all under excellent cultivation. The vines are well and properly pruned, and have a very heavy crop set. the Fruit trees are well pruned and loaded with fruit. The Figs are very large and forward, all other trees well loaded.

We were sorry to notice the loss of large squares of Cabbages, Cauliflowers, and some other crops by *cabbage lice*, we have never seen the equal of it. The moderate use of Gypsum may check this evil, but their numbers are *legions*, completely eating up and destroying the entire plant.

We would suggest that all the soil where a crop thus infested has grown, should have a heavy dressing of ashes, manure, and Gypsum this fall, and some different crop planted another year, or let it remain fallow one year, and repeatedly plowed, would be still better for the soil.

We were particularly pleased with the care and industry manifested here, and the order of the crops. A handsome crop of Strawberries was on the vines, of which we enjoyed a hearty meal, by the kindness of the proprietor

We have other places soon to visit, as we seek for information about crops in that region.

IMPORTATION OF FLAX SEED.

It is a great loss as well as a discredit to our State to Import Flax Seed, when it could be grown to good profit.

The Linseed Oil and Lead Works have a cargo now daily expected of 600 tons. Here is some $40 to $50,000 to leave our State which might have been saved.

Oregon has been wise, and this year will have some thousands of acres of good flax.

The Linseed Oil and Lead Works have always shown a great liberality in furnishing seed to growers and they should be remembered in their business.

Vegetable Growing.

It is a great pity that so many of our farmers who have plenty of land yet never a vegetable scarcely on their own tables. Even their potatoes they purchase in the market, and as to green peas and beans, tomatoes or sweet corn, melons and cucumbers they are never seen on their tables save as a luxury, while for the want of them, and the cost of producing by labor, they loose in health, strength, and expence in medicine and doctor's bills, ten times the amount.

STOCKTON.

When in Stockton recently we gathered a few items of value to us as indicative of the life of that growing City, for Business is growing as well as the "Century Plant."

Manufactories.

We visited Matteson & Williams' Plow Works, and found Mr. Matteson active as ever over his Improved Grain Header, which he avers will beat the other Harvesters badly.

This Stockton made Harvester the last year did up the work of 1,500 acres nobly—harvesting in one day 32 acres—and averaging by the week 10 acres.

We noticed the Tar weed which grows abundantly on the sand plains of the San Joaquin, and yet while the cutting bars of the Machine were covered a half inch thick, all these Machines did their work perfectly. This firm complete and send out this season, seven of these Machines, they are also building a new Gang Plow called the "Chief," a capital implement, but will not exhibit it this year unless the State Fair have a Plowing Match.

Messrs Farrington, Hayatt & Co., at their Foundry, are turning out fine work. We noticed the iron castings for "Baxters," New Universal Harvester.

Mr Baxter it will be remembered is the inventor of the "Baxter Gang Plow,"—and he keeps his genius at work—and is now on the Head-er—and intends to make it the Harvester of his Fortune.

The Stockton City Mills, are as usual sending abroad their Superior Flour, so well known in New York and Boston; the price here is $4,50 for Superfine; $5,50 for Extra, but advancing. When selling that week $1,65 cental, and the wheat in that region estimated still on hand 5000 Tons.

The new Hotel, the "Yosemite," is a fine Hotel and doing a good business. Hotel full and soon to be enlarged, a good Hotel well kept, and a well supplied table, here plenty to eat, quite a contrast to old times in Stockton.

Vincent, Callen & Co., the well known Market men supply this Hotel, and do it well. V., C., & Co., are connected with the firm of Bulletti & Co., in the Pacific Market, the popular Market men.

The Wharves were well lined with products, and business very lively. The grounds of the Park Square is being improved very much and this has started the Century Plant, which is now growing some foot or more per day.

The Agricultural Warehouses are doing a lively business Messrs Hewlet & Jones, are very busy sending out Implements for the season.

The Warehouse known as Webster, Bro's., are also sending out lots of Implements etc., and other places of business look lively—all indicate good times coming.

The Stocktonians have done nobly for the cause of Internal Improvement by voting almost unanimously to aid the Stockton and Visalia Railroad. The City voted $300,000, and the County $200,000 $500,000 in all. The length of the road within the county is about 20 miles, and the whole length of the route is 165 miles. If other counties do as well the road will soon speed on.

That Stockton, and that region is now prospering is evinced by the steady increase of capital in the Savings Bank, and the good interest the deposits pay.

From the central position occupied by Stockton for travellers to the Big Trees, and to Yosemite Valley, there will be lively times in that vicinity the present summer, when the thousands of strangers from abroad shall come to our State—Stockton must be prepared for them.

The Banks are full of money, paying good per cent, Streets improved, Schools prosperous travelling to the Big Trees, and Yosemite Valley lively, so that we can write down

"Stockton all Right."

Acknowledgements.

Articles Received at the California Farmer Reading Rooms, No. 320 Clay Street.

The Agricultural Department

We are indebted to the Commissioner of the Bureau of Agriculture, for a Bag of the Reports of Agriculture for 1868, which we shall distribute where they will do the most good.

We are indebted to Hon. Eugene Casserly for valuable papers from Washington, D. C.

We return thanks to Hon. S. B. Axtell, for Documents from Washington.

New Potatoes, Barley, and Oats.

We have received from J. K. Hudson, of Kansas City Mo. several samples Bags of new and valuable Seeds, of the above named varieties.

New York State Agricultural Society.

We are indebted to the officers of this Society for valuable documents of the Society: Viz.

The Address delivered before that Society by Prof. James Law, of Cornel University, his treatise being upon the Rational and Irrational treatment of Animals. Also,

The Memorial of B. P. Johnson Esq the late Secretary of the Society, whose decease has caused a void hard to be filled. Also,

The Memorial of Herman Ten Eyck Foster Esq a very distinguished friend of Agriculture.

The Memorials both of Mr. Johnson and Mr. Foster, are tributes to noble men, whose lives have been devoted to the cause of Agriculture and kindred interests, and whose memories will be cherrished by the good and the noble of the land.

The Land Owner:

We have a copy of this valuable publication from Chicago.

The "Land Owner and Real Estate Journal" comes to us with a very beautiful style of Map of the Real Estate around Chicago, and of Public Institutions also. This work is highly creditable to its Publishers.

OUR AGRICULTURAL COLLEGE.

Alameda, May 6th, 1870.

Mr. Editor.

Allow me to inquire what progress has been made towards the development of the Agricultural College of the State University. This College was, as I understand it, the first to be developed by the Board of Regents, who were required by their organic act to appoint a competent person who is a practical Agriculturist by profession, competent to Superintend the working of the Agricultural Farm, and of sufficient scientific attainments to discharge the duties of Secretary of the Board of Regents, and who shall reside, and keep his office at the seat of the University." What has been done in this direction? All I can learn is that some twenty thousand dollars has been expended for Chemical and Philosophical apparatus, and a University Park with thousands of Evergreens and Ornamental Trees set out in Groves, etc."—(See Report of Superintendant of Public Instruction.) But what Farmers and Horticulturists who have sons to educate, want to know is, what has been done in the way of practical Agriculture.—Any information on the subject will greatly oblige.

A Farmer.

In reply to our Correspondent we would say, that we have been living upon Hope, but now we confess that it seems so far off, that our faith in the good we had anticipated for the Sons of our Farmers is fast fading away.

We claim to feel a true interest in Agricultural Colleges—we have labored for them, for nearly twenty years, and when the National Grant was made of land, we anticipated great things for our State.

California by her natural resources, her climate and soil should have had her Agricultural College the very leading College in our Union. But instead of this, it is the very last in all its practical uses.

We hold that the Agricultural Department of the University should have been the very first to have been developed. We have the soil, the climate, the trees and plenty of them, the seed, the sunshine and rain, in its season. We have here too, a goodly number of promising young men who by a well presented theory put into practice by daily labor in Farmer; Garden, Orchard, Nursery, etc., could have, ere this, shown great and good results for these students and for our College.

We are now asked by Letter, (and this is but one inquiry of a thousand made to us.)

What has been done towards the development of the Agricultural College of the University?

We answer as far as we know—as far as we can learn by earnest inquiry. Nothing has been done, and we feel deeply pained to utter so lamentable a truth.

Why call it an Agricultural College if this all important interest is to be placed in the back ground?

Why did Congress call the Grant, Agricultural College Lands, if not to foster this Special Interest?

We call upon our Farmers who have Sons to educate, and who should be receiving the benefits of this Institution, to become interested and take up this subject.

If we are correctly informed, there is now from 150 to $200,000 in Gold, only realizing some six per cent, when its real value is more than double that amount, and while great injury is being done to the cause of Agriculture by the delay in putting this Department of the College, into working order.

With an earnest desire to awaken the attention of our Farmers and all interested, we here annex some few of the Articles establishing this Institution, and call special attention to the Qualifications and Duties of the several officers who now control that College, and we cannot but feel that the true purpose of the Act of Organization has been lost sight of entirely, or the duties neglected, which allows so valuable a trust to remain unacted upon.

There is we believe a Professor of Agriculture, a most worthy and excellent man, but we cannot learn that anything has yet been done to open the Department of Agriculture, or carry out the purposes intended.

Will not the Secretary of the Regents, whose duty is to inform the Press as well as the Public, inform us what has been done thus far, for the special cause of Agriculture.

We shall be grateful for such information. We shall continue this subject in our next number.

Herewith we give the Articles alluded to, from the Acts of Organization.

Sec. 13. The Regents and their successors, in office, when so Incorporated, shall have power, and it shall be their duty, to enact laws, for the government of the University, to elect a President of the University, and the requisite number of professors, instructors, officers and employés, and to fix their salaries, also the term of office of each, and to determine the moral and educational qualification of applicants for admission to the various courses of instruction. They shall also consider and determine whether the interests of the University and of the students, as well as those of the State, and of the great body of scientific men in the State whose purpose is to devote themselves to public instruction, will not be greatly promoted by committing those courses of instruction which are brief and special to professors employed for short terms, and for only a portion of each year in their special departments, and to be termed non-resident professors; and their decision in that regard may be reconsidered by them as often as they deem it expedient. And it is expressly provided that no sectarian, political or partisan test shall ever be allowed or exercised in the appointment of Regents, or in the election of professors, teachers, or other officers of the University, or in the admission of students thereto, or for any purpose whatsoever; nor at any time shall the majority of the Board of Regents be of any one religious sect, nor of no religious denomination, shall be equally eligible to all offices appointments and scholarships.

Sec. 14. For the time being, an admission fee and rates of tuition, such as the Board of Regents shall deem expedient, may be required of each pupil, except as herein otherwise provided; and as soon as the income of the University shall permit, admission and tuition shall be free to all residents of the State; and it shall be the duty of the Regents, according to population, to so apportion the representation of students, when necessary, that all portions of the State shall enjoy equal privilege therein.

Sec. 15. The President of the University shall be President of the several Faculties and the executive head of the institution in all its departments, except as herein otherwise provided. He shall have authority, subject to the Board of Regents, to give general direction to the practical affairs of the several colleges, and, in the recess of the Board of Regents, to remove any employé or subordinate officer not a member of any Faculty, and to supply for the time being any vacancies thus created; and, so long as the interests of the institution require it, he shall be charged with the duties of one of the professorships. A competent person, who is a practical agriculturist by profession, competent to superintend the working of the agricultural farm, and of sufficient scientific acquirements to discharge the duties of Secretary of the Board of Regents, as prescribed in this Act, shall be chosen by said Board as their Secretary, and, in addition to his special duties as such, as prescribed in this Act, he shall perform such other duties as they shall impose. He shall receive for his services such reasonable salary as the Board of Regents shall prescribe. The Board of Regents may also appoint a Treasurer of the University, and prescribe the form and sureties of his bond as such, which shall be executed, approved by them and filed with the Secretary before any such Treasurer shall go into office. The Secretary and Treasurer shall be subject to summary removal by the Board of Regents.

Sec. 16. The Secretary of the Board of Regents shall reside and keep his office at the seat of the University. It shall be his duty to keep a record of the transactions of the Board of Regents, which shall be open at all times to th inspection of any citizen of this State. He shall also have the custody of all books, papers, documents, and other property which may be deposited in his office; also keep and file all reports and communications which made be made to the University from time to time by County, State and District Agricultural Societies, Horticultural, Viticultural and Mining Societies; and of all correspondence from other persons and societies appertaining to the business of education, science, art, husbandry, mechanics and mining; address circulars to societies, and to the best practical farmers, mechanics and miners in this State and and elsewhere, with the view of eliciting information upon the latest and best modes of culture of the products, vegetables, trees, etc., adapted to the soil and climate of the State, and also on all subjects connected with field culture, horticulture, stock raising and the dairy; he shall also correspond with established Schools of Mining and Metallurgy in Europe, and obtain such information respecting the improvements of mining machinery adapted to California, and publish from time to time such information as will be of practical benefit to the mining interests and the working of all ores and metals; receive and distribute such rare and valuable seeds, plants, shrubbery and trees as may be in his power to procure from the General Government and other sources, as may be adapted to our climate and soils, or to purposes of experiment therein. To effect these objects he shall correspond with the Patent Office at Washington, and with the representatives of our National Government abroad, and, if possible, procure valuable contributions to agriculture from these sources. He shall aid, as far as possible, in obtaining contributions to the museums and the library of said college, and thus aid in the promotion of agriculture, science and literature. He shall keep a correct account of all the executive acts of the President of the University and an accurate account of all moneys received into the treasury as well as those paid out.

Sec. 17. The seeds, plants, trees and shrubbery received by the Secretary and not needed by the University shall be, so far as possible, distributed without charge equally throughout the State, and placed in the hands of those farmers and others who will agree to cultivate them properly and return to the Secretary's office a reasonable proportion of the products thereof, with a full statement of the mode of cultivation and such other information as may be necessary to ascertain their value for general cultivation in the State. Information in regard to agriculture, the mechanic arts, mining and metallurgy may be published by him from time to time in the newspapers of the State, as matter of public information, provided it does not involve any expense to the State.

AGRICULTURAL IMPLEMENTS.

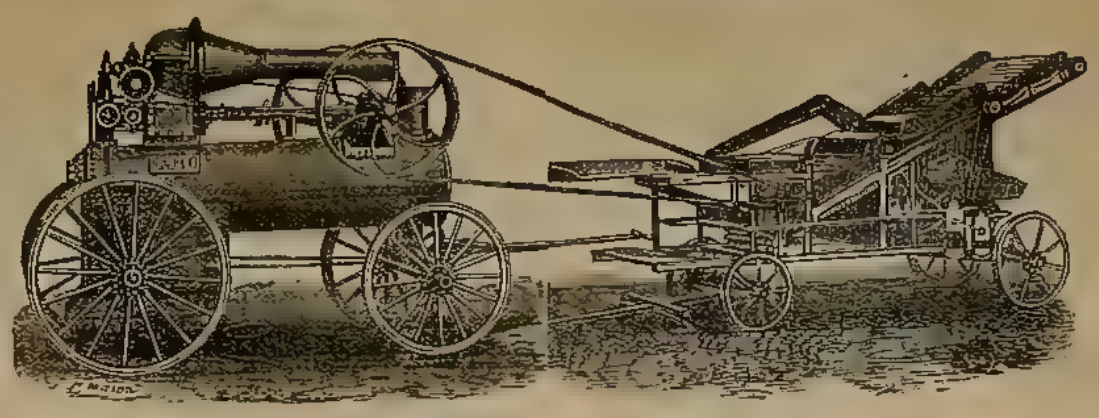
The farmer's weapons, Mowers, Reapers and Grain Headers are now selling rapidly, this all indicates large crops and prosperous farmers Messrs. Treadwell & Co., Marcus C. Hawley & Co., and Linforth Kellogg & Co, are sending out these weapons merrily, each house having their own favored implements.

The last new implement shown is the "World, a Mower and Reaper which we shall soon illustrate, and which is among the Reapers and Mowers advertised in our columns.

Farmers should be on the alert—they should examine carefully.

Mangy pigs may be cured by washing them with carbolic or cresylic soap, and sprinkling their beds and pens with the same. One application will often effect a cure.

"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 42 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agriculturalists, Nurserymen, Booksellers, and others having interests connected with the Pacific Coast, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all Human Enterprizes, the Pacific Railroad, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely Advertise now, will be the first to secure it, and when once secured, they can hold on to it.

We therefore invite all those who have valuable Implements, Manufactures, Inventions, Books, Paintings, etc. to the Columns of the California Farmer, that will give them a wider circulation than any other medium they can adopt.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Working Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER."

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY, Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to,

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

THERE IS NO DEATH.

There is no death! The stars go down.
To rise upon some fairer shore;
And bright in heaven's jewsled crown
They shine forever more.

There is no death! The dust we tread
Shall change beneath the summer showers
To golden grain or mellow fruit,
Or rainbow tinted flowers.

The granite rocks disorganize
To feed the hungry moss they bear;
The forest leaves drink daily life
From out the viewless air.

There is no death! The leaves may fall,
The flowers may fade and pass away—
They only wait through wintry hours,
The coming of the May.

There is no death! An angel form
Walks o'er the earth with silent tread—
He bears our best loved things away,
And then we call them "dead."

He leaves our hearts all desolate—
He plucks our fairest, sweetest flowers;
Transported into bliss, they now
Adorn immortal bowers.

The bird like voice whose joyous tones
Made glad this scene of sin and strife,
Sings now in everlasting song
Amid the tree of life.

And where he sees a smile too bright,
Or heart too pure for taint and vice,
He bears it to that world of light
To dwell in Paradise.

Born into that undying life,
They leave us but to come again;
With joy we welcome them—the same,
Except in sin and pain.

And ever near us, though unseen,
The dear immortal spirits tread;
For all the boundless universe
Is life—there are no dead!

A WONDERFUL TRUTH.

How few persons ever reflect upon the consequences which result from what we see, hear, and feel, upon ourselves, and the effect of what we do, say and speak. Experimental Philosophy and practical results show that

NOTHING LEAVES US AS IT FOUND US.

If a sheet of paper on which a key has been laid be exposed for some minutes to the sunshine, and then instantaneously viewed in the dark, the key being removed, a fading spectre of the key will be visible. Let this paper be put aside for many months, where nothing can disturb it, and then in darkness be laid on a plate of hot metal: the spectre of the key will again appear. This is equally true of our minds. Every man we meet, every book we read, every landscape we see, every tone we hear, leaves its image on the brain. These traces, which under ordinary circumstances are invisible, never fade, but, in the intense light of cerebral excitement, start into prominence, just as the spectre image of the key started into sight on the application of heat. It is thus with all the influences to which we are subjected.

HOW SOME NEW YORKERS KEEP LENT.

The true way to keep Lent, it is said, is to pray, practice self-denial, and turn our minds and thoughts strictly to pure and good subjects. Some keep it to the letter, while others observe it only in the spirit. A fashionable lady up-town, in Lent, dresses herself in deep mourning, and spends much of her time in her room before a crucifix, reading devotional books. She sees no visitors, makes no calls, and lives entirely upon poor fare. Another denies herself all the luxuries of the table and toilette, and gives the money thus saved to some poor families in the neighborhood. A gentleman of our acquaintance abstains from all stimulants, such as tobacco and wine, and saves the money. He does not then present it to charitable institutions, but buys a new supply of wine and cigars, and smokes all the harder to make up for his lost time

[The above description of the way some of the religious people observe their "Holy Days," we clip from the *Home Journal*, New York. This can be applied to almost all sects in religion. There is too much cant, hypocrisy and outside show. Were it not for this, with the great number of churches in our city, and the other organizations, of Sabbath Schools, and Young Men's Christian Associations, there would not be so many saloons, pit-falls, and dance cellars, for the power of *live* religion would remove them.—Ed. Farmer.]

A writer in the *Graphic* says that "a woman will always love the meanest man of suitable age, after a fashion, if she has never seen any more attractive specimens of masculine humanity."

A Wisconsin lover caught his bride carrying in a "back log" that he himself could not lift, and he concluded not to marry in that family.

The School Commissioners in Iowa prohibit "lady teachers" kissing school-boys over eighteen years of age. This is not forbidden in California.

A SOFT ANSWER, ALMIGHTY,

OR MRS. THOMPSON'S WHITE WARE.

(Concluded from last Week.)

Robert Thompson was not an unkind man, only thoughtless. He was a type of a very large class, more especially farmers, who do not feel the need of life's rugged pathway being softened with flowers. Absorbed in his stock, his money-getting, he did not realize how monotonous was his wife's life at home. He had his recreations, the weekly markets, gossip with his brother farmers, politics; she had nothing but work and care. He did not realize the truth that the worn, shabby home told upon her, that she needed some brightening to come to it as a yearning want of life. And so, as the years had gone on, she grew dissatisfied at heart, hardly understanding what she wished for or what she did not wish, the intensely unlovely, prosy, dull life somewhat sourling her spirit. Now and again, when she gave back a short or bitter retort, Robert wondered, she, who used to be so sweet-tempered.

All through the long forenoon, Mrs. Thompson nursed her wrath. Robert was selfish and unreasonable, and she did not care who knew it. She would not have the sewing-club at the farm, come what might. The potatoes got boiled; the big piece of beef was simmering on the fire. Before twelve o'clock had well struck, she saw her husband and his two friends coming through the orchard, with red and hungry faces. Mr. Thompson always wanted his dinner boiling hot, and she hastened to lay the cloth in the cold room of the kitchen. Frank and Charley, her two boys, came running in from school, each striving to claim her attention. She felt tired, heated, and very cross

"Why! isn't dinner ready?" demanded Mr. Thompson, not seeing it actually on the table when he entered. "I told you we had no time to waste to-day," he added angrily, in his hurry and hunger. "If I hadn't anything to do all the afternoon but to get dinner, I'd have it ready to time, I know."

A bitter retort was springing to her lips. But ere it could be spoken Charley clamorously interposed, pushing his newcopy-book before her eyes

"Look, mother! I am going into sentences now, like Frank. It's my first copy. The master wrote it, and he said I was to get it by heart too, and always remember it. Do read it, mother?"

Mrs. Thompson, her arms full of the cracked old mulberry plates, paused a moment to let her eyes fall on the new copy. "A soft answer turneth away wrath," was what she read. It was not that the proverb was new—she had read it scores of times—but there was something in its appropriateness to the present moment that fell like a cool sweet wind on her heated pulses.

"I will have it ready in a moment, Robert," she said, quietly.

Mr. Robert Thompson looked up. Evidently he had not expected so pleasant a reply. If the truth must be told, he had thought a good bit that morning of his wife's request about the white ware. Not in the way of granting it, but that she would probably be sulky over it when they got in to dinner.

"It doesn't feel here as it does in that blazing meadow," he remarked to his friends, as they went into the cool north room to dinner. "Wish that can keep in-doors this weather have an easy time of it. They don't know what heat is."

Mrs. Thompson wondered whether this was a slap at her. Her face looked scarlet enough for any amount of heat. As to setting down with them, she had enough to do to wait on the party. It was washing-day, and Molly must not be called.

"This butter must not be kept in the kitchen. It's like oil," said Mr. Thompson.

"I took it out of the cellar since you came in. I will go down and get some more if you think I had better," was the reply, given pleasantly.

"Never mind. Well, I declare!—do you call this meat boiled?" went on Mr. Thompson as he began to carve. "It's harder than a rock. If meat has to be cooked pretty fresh this weather, it needn't be like this."

"I tried to have it nice, Robert," she said, striving to choke down a rising sob—as well as an angry word.

Mr. Thompson, aroused by a quiver in the tone, looked at his wife. His friends glanced at one another. She sat down at length, but could not eat. Mr. Thompson finished his dinner in silence.

He was watching his wife's face. There was something in it he did not understand—a kind of patient, hopeless look, as if she no longer cared to struggle onward. The old mulberry ware did look dingy on the snowy white tablecloth; almost too bad for these chums of his to sit down to. He wondered he had never thought so before. Robert Thompson grew thoughtful.

He passed into the kitchen when they were going out again—how hot and stifling it felt with that big fire—as bad as the south meadow. His wife had been in it cooking; that must have made her face scarlet. In-doors was not so comfortable a place after all, if you had hot work to do, was the idea that flitted through his mind. And—perhaps the work was overmuch for his wife, who at best was but a delicate woman.

A fresh cool breeze had sprung up from the south, as he went out, walking slowly, but the sun was burning hot still. Robert Thompson waited to wipe his brows; and in that moment the voices of his comrades came toward him from the other side of the hedge, where they stood in the little shade it cast.

"I never pitied a woman so much in my life," quote one of them. "She works like a slave and does not get even 'thank ye' for it from Thompson. He's a good fellow, but uncommon down upon the work. Strong as a horse himself, he thinks, I suppose, women must be the same."

"Yes, Bob's a sterling good fellow, but Jane Lawrence made a mistake when she said 'Yes' to his asking," cried the other. Jones, she wasn't cut out for a farmers wife—especially one who keeps his folks to it like Thompson does. She's over sensitive—delicate; any lady but her would have turned long ago and bade him give her proper help. He won't make his money out of her many years if he don't take better care of her. She'll run down fast. Awfully changed, she is. She looks as faded as the old house rooms—and they haven't seen a coat o' paint since grandfather Thompson's day."

"Ah, she'd better have taken Joe Burnham. The Lawrences used to have things nice in their home, and she'd have got 'on so still if she'd married Joe. His wife's just gone out in her pony-chay. I say, Jones, I wonder wither Thompson's wife's ever sorry?"

Was she? The unconscious comments of these, his warm friends, came crushing down on Robert Thompson's heart and brain like a bolt of fire. That she rejected Burnham for him, he knew, when she came home to the old homestead, and took care of his invalid mother. Tenderly had she done it, too. And—could she be wearing out her life in hard work for him; she, whom he loved well, for all his churlishness? Robert Thompson stole away—he could bear his thoughts no longer—and he felt that he could almost kill himself for his blind heedlessness.

The afternoon wore on towards evening. Mrs. Thompson had finished her indoor-work—the washing up of the dinner dishes and the putting of the rooms straight—and was going in with an armful of fine things that she had taken from the clothes lines, when the sound of wheels made her look round.

"I've brought that white ware, Mrs. Thompson," said the brisk voice of Grover, springing from his cart, and lifting down carefully a large hamper.

"But I didn't order it, Mr. Grover," she rejoined in rather a frightful voice.

"The master did, though. Mr. Thompson came down this afternoon and said the things was to come up to you at once. There's the dinner set you admired, and a tea set as well. Where shall I put 'em?"

"Bring them in, please," she answered rather faintly. He did as he was bid, and then drove off.

Mrs. Thompson sat down by the hamper of crockery and cried as if her heart would break. They were magical tears, too, for they washed all the weariness and despair from her face, and the shadow from her eyes and heart. She forgot that she was tired, or that the day was hot. She only thought how kind Robert was, and what a wicked woman she had been for saying to herself in her temper that she'd rather have had Squire Burnham. Then she unpacked the treasures, pulling them out from amidst the hay, and singing softly all the while. Oh, it was beautiful ware!—with its clear opaque white, and here and there a delicate tracing of fuchsia or convolvulus.

Mr. Thompson came in and found her in the midst. "What is it, Jenny?" he asked—the old fond name he used to call her.

"Oh, Robert!" taking a step towards him. He opened his arms and drew her close to his heart, kissed her as fondly and tenderly as he ever had in the days of his courtship.

"I have been a brute, little wife," he whispered, huskily. "Can you ever forgive me?"

"Forgive you O, Robert! I never was so happy in my life! I have been to blame, I have not been as patient and kind as I might."

"Yes, you have. You've been an angel compared to me. I have made a slave of you; but all that is over now. I did not think, Jenny; I did not, indeed."

"But—Robert——"

"You shall have more help in the house, another servant. We'll get her in, Jenny, long before the sewing-club night comes round."

"Oh, Robert, how kind you are! I feel as light as a bird."

"And you are almost," he answered, smiling a little sadly as he looked into her eager face. "We'll all turn over a new leaf, Jane. Heaven knows I did not mean to be cruel."

"Robert, you were never that."

"Well—we'll let it be; bygones shall be by gones if you will. Oh, and I forgot to say I saw Leeds this afternoon. It's a very dull time just now, the poor fellow says, without a job on hand, so I thought I'd give him one. They'll be hear to begin to-morrow morning."

"You—are—not going to have the house done up?" she exclaimed in wild surprise.

"Every square inch of it. And, once the painting and that's finished, we'll see what else we can do to make it look a bit brighter.

She hardly believed it; she burst into tears. "And I have been so wicked!" she cried. "Only to-day I had quite wicked thoughts, Robert. I was envying Mrs. Burnham; I was feeling very angry with everybody. It was the discouragement, Robert." "Yes, it was the discouragement," he said quite humbly "We will do better for the future, Jane; I'll try another plan."

She cried silently for a minute longer; soft happy tears; feeling that light had superceeded the darkness.

"And it has all arisen from my trying to carry out for a bit that blessed proverb, 'A soft answer turneth away wrath!'" she murmured. "Robert, did you ever before see such lovely white ware?"

A Good Woman's Rights.

Since the 1st of March, 1860, Mrs. Frosse, of Oneida, N. Y., has woven 3,751½ yards of carpeting, of which 2,694½ yards were ordered by customers, and 1,057 yards were manufactured and sold. Besides, she cut and prepared the material herself for quite a portion of the carpets. And this in a addition to attending to her household duties, and the accomplishment of a large amount of miscellaneous work.

Frail things—Dates.

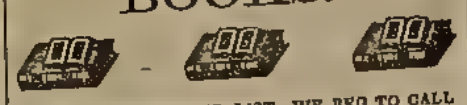
NEW

AGRICULTURAL BOOKS.



IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31-7

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ENTOMOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORRILLA which was exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

Miscellany.

CHARLES DICKENS.

The following anecdote is told of Chales Dickens, who was once present at a dinner-party where a young writer inveighed against the world generally, in a very "forcible feeble manner."—During a pause in this philippic against the human race, Dickens said across the table, in the most self-congratulatory of tones: "I say, ——, what a lucky thing it is you and I don't belong to it. It reminds me," continued the author of "Pickwick," "of two men who on a raised scaffold were awaiting the final delicate attention of the hangman; the notice of one was aroused by observing that a bull had got into the crowd of spectators, and was busily engaged in tossing one here and another there; whereupon he said to the other, 'I say, Bill, how lucky it is for us that we are up here!'"

A Healthy Family.

There is a man in the vicinity of Cedar Keys, Florida, who has twenty-two children living. The family subsist principally on fish and oysters. They have never had a plate nor a cup and saucer in their house. In lieu of cups they use gourds and shells. They help themselves to the cooked fish and oysters from a common huge dish, and each member of the family uses his or her own jack-knife for that purpose. Those articles of diet are spread on corn bread, which they make themselves, and then they consume the plate, as well as the food on it. In this way the washing of dishes is wholly obviated. The family are all healthy, and are rather more robust than graceful.

Those young women of the present day, who scorn to scorn the domestic duties of the kitchen, should go to this region and live there, they would have no dishes to wash. What say they to this fashion?

Paper from Old Rope.

Our readers will be surprised when we inform them that out of this dirty and apparently unbleached substance is produced a tissue of paper of the most beautiful fabric, of even surface and delicacy of color, a ream of which weighs, with wrappers and strings, two and a half pounds. It is principally used in the potteries for transferring the various patterns to the earthenware, and is found superior to any substance yet known for that purpose. It is so tenacious that a sheet of it twisted by the hand in the form of a rope, will support upwards of 500 lb weight. Truly, we live in an age of invention.

Will S. P. Taylor & Co., of the Pioneer Paper Mills, note this article, and be prepared to furnish the tissue paper for tracing the figures on the china, and crockery ware that will soon be manufactured in this State, where all the material for its manufacture can be found in large quantities.

The Brain—Curious Facts in Nature.

In the fish, the average proportion of the brain to the spinal cord is only 2 to 1. In the reptile, the ratio is 2½ to 1. In the bird, it is 3 to 1. In the mammalia, it is 4 to 1. But in man, it is 13 to 1. No less remarkable is the foetal progress of the human brain. It first becomes a brain resembling that of a fish; then it grows into the form of that of a reptile; then into that of a bird; then into that of a mammiferious quadruped, and finally it assumes the form of a human brain, thus comprising in its foetal progress an epitome of geological history, as if man was in himself a compendium of all animated nature, and of kin to every creature that lives.—*Utah Magazine.*

Wealth of Massachusetts.

The returns to the office of the Secretary of the Commonwealth from the several towns and cities of Massachusetts of the assessments on the 1st of May last, show that the valuation of the State was $1,341,989,403—an increase of over $120,000,000 for the year. The increase of the previous year was $84,000,000. The total amount of money raised by taxation was $20,000,000, over $7,500,000, being raised in Boston alone. The number of polls taxed was 337,043. There were 207,057 dwelling houses in the State, an increase during the year of nearly 7,000. The number of horses in the State was 103,114; nuber of cows, 165,880; number of sheep, 112,047.

A Truly Manly Act

The English Royal Humane Society has given its silver medal this year to Lord Walter Kerr, commander of the Hercules ironclad. One of his men fell overboard in the Tagus, and striking his head into the chains, was stunned. Lord Kerr, seeing that he could not be saved if he waited for a boat to be lowered, sprang from the bulwark of the ship—a flight of thirty feet—into the stream and swam to the seaman, whom he succeeded in holding above the water for ten minutes of terrible endurance, until the ship's boat reached them and took up the commander and his man, nearly dead.

Prior to 1837 the woolen manufacturers of New England were accustomed to use castile soap almost exclusively for fulling purposes. In that year Stephen N. Mason established a soap factory at Woonsocket, and within a very few years his product entirely superceded the imported article. The factory is still in operation, giving employment to eight hands, and turning out 2,000,000 pounds of soap per year.

Bad Matches.

The United States Marshal has seized three Match Factories for violation of the U. S. Revenue Laws, two in this city and one at Sacramento. Bad matches these that match against the Government.

Potatoes mashed fine and mixed while hot with an equal bulk of corn meal is the best of all puddings for fattening chickens fast.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L. AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that; on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H. & L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $[illegible] per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be noted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, May 18.

There has been quite an advance in Wheat of superior quality, in this Market within the past ten days, but in our humble judgement, this rise has been caused without any good basis for such an advance.

The quotations here have reached 1,95 the cental, being thirty cents advance in ten days, whereas the advance on Liverpool has only been one half that sum and this advance too here, just on the entrance of the new crop, and while we have still of the old crop, fully ONE MILLION CENTALS of Wheat on hand.

We can see no reason for this advance, for if it was real and permanent, and the result of a demand from abroad, by reason of great rise there, or short crops—why should our Flour Mills cease work?

It is reported that there was an active demand for Wheat and Flour for China. Yet the report of the sales in China by the arrival of the Steamer, looks more like a large loss than any profit, and we loose our calculations if shippers under the present quotations do not bleed heavily also.

The advance of wheat (which we claim is a speculation) has given a vim to other grains, wheat being the Talisman often.

Barley and Oats have been sold freely at advanced figures. It will be a good thing if these extra rates put the advanced value in our Farmers pockets, but we opine differently. At all events we hope the grain sold will go abroad, to make room for the new harvest.

Hay is being harvested well, and has advanced a little as well as grain.

Potatoes have dropped in value materially. Speculators in this article, did not make their pile—of gold—though they have a *pile*—of Potatoes on hand. New Potatoes are coming in finely, and prices less.

All other kinds of produce very abundant, and prices cower.

TO CORRESPONDENTS.

THE TRUE NAME.

We frequently receive letters of enquiry, also of suggestions—often letters containing criticisms of writers to our Journal, from persons who are entire strangers to us, letters often personal in their expressions and criticisms. Such letters we cannot publish or reply to—such go into the waste bag. Writers should give us their full names and residence, so that we may know all is right—their names will not be used against their wish, yet we must know the writer, else we shall not publish them.

ALSIKE CLOVER—LAWN GRASS.

This valuable Clover so highly esteemed abroad can be had at our Office.

Also English Lawn Grasses of best kinds at FARMER OFFICE.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser forsixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co, to our Office.

GOLDEN EAGLE HOTEL.

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS A "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will alway be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the present year, to more than double its former size, with spleudid suites of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night

D. E. CALLAHAN,

3. PROPRIETOR

Auzerais House,

SANTA CLARA STREET,

SAN JOSE, CAL

☞ This HOTEL has been fitted and furnished with reference to the real comfort and Enjoyment of Guests and the traveller who seeks a Home. Quiet, and Best.—To this end no pains or expence will be spared.

33 6. J. M. STAPLES & SONS, Proprietors.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER.

ORANGE SEED.

THOSE WHO WISH TO RAISE TREES FOR AN *ORANGE PLANTATION*, Can obtain a SUPERIOR SEED at the FARMER OFFICE.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

PARIS, April 23d, 1870.

SPANISH SHEEP AND WOOL.

Spain preserves to this day, the celebrity of her wool, which was famed when the Phœnicians occupied the Iberian Peninsula. Like her population, the number of Merinos has also diminished—where there were many millions of sheep, there is not now half this number. This is the month when flock masters are most busy. The manner of rearing the sheep consists, first, the stationary flocks, comprising about one-ninth of the total number in the country, and the most inferior breeds, pass all the year round on the same land. Second, those that emigrate—to pass the Summer in the districts of Leon, Asturia and Navarre to return in winter to the mild regions of Estramadera, Andulasia, New-Castile and Grenada.—The Hegira for the North, commences in April, and the journey extends over six weeks. The sheep travel in the mornings and afternoons only, to escape the heat by day, and the difficulty of midnight control. The flocks vary from one, up to 60,000 head, but move in subdivisions, of 1000 to 1,200—so that all may pick up something to eat on the road, and obviate confusion; the rams march separately—but unite at the common meeting place

PUBLIC ROADS, SHEEP SHEARING, ETC.

The various roads, as old as Spain itself, are 35 yards wide, grassy at the sides, and no encroachment is allowed on this space Indeed Charles the Fifth on one occasion, extended his park on a portion of one of these high-ways, but had ever to open the gates as the travellers approached. Each flock is under the charge of a conductor, mounted on horseback, who is assisted by five sub-shepherds, their pay for the season, varying from 800 to fr. 25. But then they have the privilege of grazing a few sheep or goats on their own account. Dogs of a very huge species, complete the guard, and defend the sheep against wolves Along the route are special half-way houses, where the shearing takes the place, and capable of taking off a thousand fleeces per day—those of the rams, weigh in the rough, from 9 to 11 lbs—the ewes, one half less, and both lose 60 per cent when scoured. It is to these depots, the wool merchants come to make their purchases.—In July or August, the rams are permitted to cover the ewes—25 of the latter to each ram. The rams are not allowed to cover, (nor the ewes to breed,) until two years old, and after three or six years, are cut and prepared for the butcher. It is in July that the lambs, are deprived of their tails, to prevent the soiling of the fleece, and are branded with a hot iron on the forehead, or cut on the ears, with the distinguishing mark of their owner; and a few are castrated at this epoch, to form "conductors;" —these bell-weathers are quite pets with the Shepherds, and march, with huge bells round their necks, like drum-majors, at the head of the flock. Towards the end of September, the "return journey" takes place—slowly, on account of the gestation stage of the ewes. The lambing season is generally November or December, and on account of the limited extent of the pasturage and fodder, from one-half, to three-fourths of the lambs, are slaughtered—the males first, except those selected for reproduction. Very often two ewes have to suckle one lamb, and much patience is required to make the little stranger, take to the foster-mother. They are never milked, and the lambs can wean themselves when it pleases them.

NAPOLEON'S AID TO AGRICULTURE

The Emperor in a quiet way, has done much for Agriculture. He has selected the most barren lands, and made them blossom like the rose. In Sologne, he purchased 7000 acres—of cold desolate heath and marshy ground—divided it into farms, erected buildings—imported improved breeds of cattle. The great belt of Sandy desert between Bordeaux and Bayonne—comprising a million and a half of acres—he bought 17,000—planted pine trees to yeild resin—reclaimed the one half of his property by means of special manures—made roads, built farm houses and a village—dried up a neighboring marsh, rivalling now the polders of Holland in fertility. The camp of Chalons, was formerly a chalky waste. By means of the manure from the cavalry stables, 1,200 acres of meadow land smiles in the centre of the camp, and three thousand more surround it with waving corn. At Vincennes, by means of the night soil from the forts, 300 acres of heath and briar land have been levelled, and are now profitably cultivated. In the granite mountain pastures of Limousin, he has drained and been successful. Nearer Paris, he has model farms at Rambouillet, Saint Cloud, and Saint Germani devoted to special experiments. In Algeria, he has lately established a model farm for the colonists. All these works have cost upwards of fifteen millions of francs, of which eight have been paid in wages—the returns in the aggregate, annually, represent nearly one million—more than the half being expenses under the head of labor. In these various Oases, His Majesty has adopted the most advanced principles of husbandry—his "High Farming" does not consist in "sowing gold, and reaping silver." The best breeds of cattle, the most suitable machinery, the most appropriate manures have been imported. Colonies of farmers have been created—stirred to emulation by liberal prizes and kind encouragement, and every employée, from the highest to the lowest, has his dividend from the profits, and the greatest interest as a consequence, in commanding a success.

DOUBLE PLOW, NEW PRODUCT.

I have noticed in Burgundy, a double plough at work on light soils, drawn by three horses, and capable of turning over nearly three acres per day. It has two mould boards, coulters, etc., attached to the single beam, or rather two beams united at the point of draught, and on wheels. It appears to give much satisfaction.

At Erfurt, in Prussia, satisfactory experiments have been made on the *Polymnia edulis*, introduced from Bolivia. It is somewhat of the dahlia kind, and in its native land, the roots often attain a weight of from 12 to 22 lbs. When cooked, they form one of the principal articles of dietary with the Bolivians—the native Indians eat them raw like apples. The South of France—whose climate is very favorably suited for the plant, is about cultivating it. The stems and leaves of the plant, are reported as a grateful feed for cattle.

MAD HOGS, ETC.

A farmer announces, that being short of pasture for his hogs, he turned them into a field of buck-wheat, then in flower, and which he was about ploughing in. About half an hour afterwards, the animals exhibited all the symptoms of drunken madness, they furiously attacked, and devoured the shepherds dog, and the herder only escaped their attention, by climbing a tree. This fact has been observed before in other cases.

PROTECTION OF BIRDS.

The Agricultural (central) Society of Germany, attributes the ravages of insects made on the crops, gardens, and young forests of Fatherland, to the destruction of these birds which prey on the vermin. The Government as early as 1860, interdicted the killing of certain birds, or the disturbance of their nests, under a smart penalty, and at the same time ordered in the Village Schools instruction relative to such useful friends. The Society in question has on foot, the scheme of an international treaty, to be executed between Germany, France, Austria, Spain, Italy, Greece, etc., for the protection of these birds of passage, which go to pass their winters in the sunniest spots of the South.

THE WORLD REAPER AND MOWER.

THE WORLD REAPER AND MOWER.

This New Competitor for Public favor we now present to our readers, Illustrated here before them as we promised a little time since. The cut has just been recieved, and although "The World is new," the people like it, for we learn that of *two car loads* that but lately came over the Rail Road, more than one half have been sold already.

It will be seen that all the working machinery, save the wheel gear and cutting knives and rake, are *locked up* in the *Iron case* beneath the Drivers seat, there *free* from dust and dirt it works perfectly, (see advertisment.) We append the following letter which speaks its favor. It is worth seeing. Linforth, Kellogg, & Co., have it on sale.

SALINAS CITY, May 25th., 1870.

Messrs Linforth Kellogg & Co.

Gents:—We have set up, and now have on exhibition the "World Reaper and Mower." Every one who has examined it are loud in the praise of its perfection mechanically. We think we can introduce them here without much trouble, and will exhibit its working powers in the first field of grain that is cut near town. Our crops are coming *out wonderfully*, will have *much over* half a crop. Within one mile of Salinas City, we have some fields of wheat that would *make* the reputation of a wheat growing County, ANY YEAR.

Yours Respectfully,

HARVEY & Co.

THE GERRISH PUMP—WATER FOR CATTLE.

Now that the dry season is upon us, water! water!! water!!! is the universal cry, and for the safety of our Buildings water is the element needed. At Elko this spring, the "Gerrish Pump" saved a full block of buildings from loss by the ready supply it gave when the fire hose was attached to it. This excellent Pump is universally used in all that region and gives very great satisfaction.

The Visalia *Delta* also says it is universally used there among sheep men, and gives general satisfaction.

Stock men must be sure to have a full supply for their stock in dry weather, nothing is more injurious to stock than want of water in hot weather and the Gerrish Pump when *correctly set in the well*, is one of the best pumps known. Many persons ruin their Pumps by not placing them in true perpendicular order for their working. Water should be ready for stock and for fire. Linforth, Kellogg & Co., have the Gerrish Pump.

Eastern Correspondence.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND FOURTEEN.

NEW YORK May 9th, 1870.

CHURCH OF THE MESSIAH—PREACHING.

Editor California Farmer:

"How do you do Mr. G.," said Miss C., a sparkling belle of 20th st., as we were leaving the Church of the Messiah last night. "How do you like the new star among pulpit actors? He is too much like Edwin Booth to suit my ideal of a clergyman." "My dear Miss C.," I replied, "You have paid Mr Hepworth a very high compliment. Edwin Booth as an elocutionist stands among the very first I have ever heard. His name can be placed with Ristori, Fanny Kemble, Butler, Henry Ward Beecher, Dr. Chapin, Pere Hyacinthe and John Gough. The day has gone by when a clergymen can afford to neglect elocution. In a city like new York to possess the influence which would enable him to be of service to his Divine Master, he must not only be pure-hearted, simple in his manner, a scholar in his acquirements, but he must be, if not an orator, a graceful—or an effective speaker. If he be ever so learned and cannot repeat his thoughts, so as to play with the feelings of men, his work will be barren. Religion, philanthropy and civilization will have a poor servant in him. He must be in the pulpit what Booth is on the stage, he must not let the charm of the actor detract from the sermon of the minister. He must bear in mind that his Divine Master was a perfect orator. Good people attend church because they wish to express by so doing their love and gratitude to God, but the mass of people, especially those who are young, wish at the same time to be instructed and and entertained. Christians, members of churches perhaps, do not need an eloquent teacher, but the congregations do. It it not the good but the wavering and the bad that need salvation. That Mr. Hepworth's sermon if it did remind you of the beauty of Hamlet was not ineffective, was proved by the strict attention of the audience, by the moistened eyes, and by the reverence with which every head was bowed when the choir chaunted in modulated tones the Lord's prayer. Rest assured, my dear Miss C, inasmuch, as His Satanic Majesty dressed up vice in robes of magnificence and renders her presence attractive, that minister is doing his duty, and is counteracting the influence of evil who beautifies virtue, and makes her presence more fascinating. Mr. Hepworth *does* resemble Edwin Booth in the perfection of his pronounciation, in the management of his voice, in the refinement of his manner, and in the exquisite sensibility of his nature which can easily be read in the play of expressive features and in the magnetism of his presence. It is, however, a resemblance not an imitation, and once let it be known that the new clergyman in the pulpit is like Edwin Booth on the stage, as good a man, as industrious a student, as perfect an elocutionist and his church will be crowded by an eager audience, better too, by the highest class of intellectual young people, and what an opportunity this will give him. He can transform into active, generous Christian men and woman, the multitude of skeptical vacillating young gentlemen and young ladies who are attracted to his church by the fact that a *Minister* is as charming as an actor. If he can do this, why should he not look like Edwin Booth. Indeed my dear Miss C, it is the highest compliment you can pay him, and if you reflect, you will change your opinion and incline rather to the opposite extreme, and wish that each pulpit should be so attractive as to make the church more popular than the theatre. You are here this evening to listen to an eloquent man. Your own respectable church with its highly estimable pastor, I warrant is not crowded. Your good parents are perhaps dozing in their comfortable pew, while the monotonous tones of their clergyman's voice lulls them to rest like the sighing of the wind. They are the salt of the earth *I* know, but their brilliant, witty, fashionable daughter is not with them; she glories in the respectability but professes the dullness of her own church and is attracted away up here in Park Avenue, to hear a star. You know there are hosts of young girls like yourself. I can see crowds of young men who are like them, and if Mr. Hepworth can only attract you, he will exercise an influence for good, which your excellent pastor never will be able to exert. Glory then to the clergyman who *is* like Edwin Booth, who *can* draw a crowd, who *can* improve his opportunity and who while he amuses can teach them and fit them for service as soldiers of the cross. Ah! here we are at home, and I have in my enthusiasm done all the talking. Forgive me for I have been very much interested. Good Night.

M. A. B.

GENESEO, HENRY COUNTY, ILLINOIS, April 17, 1870.

Editor California Farmer:

Some time in February I enclosed you $5.00 for one years subscription for your paper, I sent from the International Hotel, in San Francisco, On my arriving home I found four copies of your paper.

I feel a great interest in your State, I shall have the Farmer once a week to strengthen that interest. Water froze one-fourth of an inch thick last night. Please let me hear from you, if in no other way by the receipt of the Farmer once a week.

Every thing is dull and prices low, still we ought to be happy, as we get enough to eat and to wear. I would like your climate and people, but your fleas bite just like our? I don't like either. The only difference is, that your's bite in winter and ours in summer. Here fleas bite in summer and fast in winter. Does your's bite in the summer time? I ask these questions so that I may know what to do in the future.

Please give my respects to S. Daniels of Lakeville, Sonoma County, if you should meet him.

Please send on the paper and oblige,

Respectfully yours, P. P. B.

[REPLY.]

[Our friend can come safely, for ere long we shall have some new invention that will trap fleas, so there will be no more trouble about them. Our climate and soil will more than match the fleas —Ed *P.*]

A copy of Loomis' Musical Journal, came to us by Mail, this Publication has three pieces of New Music. Also many valuable articles, all tending to create and keep alive the Science of Music, and the love of it.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER NINETEEN.

SOILS AND FERTILIZERS.

A Farmer is a manufacturer of articles wherefrom mankind are fed and clad; his raw materials are the soil and the various substances he mingles therewith or adds thereto in order to increase its productive capacity. His art consists in transforming by cultivation crude, comparatively worthless, and even noxious, offensive materials into substances grateful to the senses, nourishing to the body, and sometimes invigorating, even strengthening, to the mind.

I have heard of lands that were naturally rich enough; I never was so lucky or perchance so discerning as to find them. Yet I have seen Illinois bottom whereof I was assured that the soil was fully sixteen feet deep, and a rich, black alluvium from top to bottom; and I do not question the statements made to me from personal observation that portions of the strongly alkaline plain or swale on which Salt Lake City is built, being for the first time plowed, irrigated, and sown to wheat, yielded ninety bushels of good grain per acre. I never saw, yet on evidence believe, that pioneer settlers of the Miami Valley, wishing, some years after settling them, to sell their farms, advertised them as peculiarly desirable in that the barns stood over a creek or "branch," which swept away the manure each Winter or Spring without trouble to the owner; and I have myself grown both Wheat and Oats that were very rank and heavy in straw, yet which fell so flat and lay so dead that the heads scarcely bore a kernel. Had I been a wiser, better farmer, I should have known how to stiffen the straw and make it do its office, in spite of wind and storm.

[And let me here say, lest I forget it in its appropriate place, that I am confident that most farmers sow grain too thickly for any but very poor land. If one thinks it necessary to scatter three bushels of Oats per acre, I tell him that he should apply more manure and less seed—that land which requires three bushels of seed is not rich enough to bear Oats. He might better concentrate his manure on half so much land, and save two-thirds of his seed.]

I do not hold that the remarkably rich soils I have instanced needed fertilizing when first plowed; I will presume that they did not. Yet, having never yet succeeded in manuring a corn-field so high that a few loads more would not (I judge) have increased the crop, I doubt whether even the richest Illinois bottoms would not yield more Corn, year by year, if reinforced with the contents of a good barn-yard. And, when the first heavy crop of Corn has been taken from a field, that field—no matter how deep and fertile its soil—is less rich in corn-forming elements than it was before. Just so sure as that there is no depletion or shrinkage when nothing is taken from nothing, so sure is it that something cannot be taken from something without diminishing its capacity to yield something at the next call.

Rotation of crops is an excellent plan; for one may flourish on that which another has rejected; but this does not overbear Nature's inflexible exaction of so much for so much. Hence, if there ever was a field so rich that nothing could be added that would increase its productive capacity, the first exacting crop thereafter taken from it diminished that capacity and rendered a fresh application of some fertilizer desirable.

Years ago, a Western man exhibited at our Farmers' Club a specimen of the soil of his region which was justly deemed very rich, taken from a field where Corn had been repeatedly grown without apparent exhaustion. A chemical analysis had been made of it, which was submitted with the soil. It was claimed that nothing would improve its capacity for producing the great Illinois staple. Prof. Mapes dissented from this conclusion: "This soil," said he, "while very rich in nearly every element which enters into the composition of Corn, gives barely a trace of Chlorine, the base of Salt. Hence, if five bushels per acre of Salt be applied to that field, and it does not thereupon yield five bushels per annum more of Corn, I will agree to eat the field."

Many men fertilize their poor lands only, supposing that the better can do without. I judge that to be a mistake. My rule would be to plant the poorest with such choice trees as thrive without manure, and pile the fertilizers upon the better. It seems to me plain that of two fields, one of which has a soil containing nine-tenths of the elements of the desired crops, while the other shows but one to three-tenths, it is a more hopeful and less thankless task to enrich the former than the latter. If you are required to supply to a field nearly everything that your proposed crop will withdraw from it, I do not see where the profit comes in; but if you are required to supply but a tenth, because the soil as you found it stood ready to contribute the remaining nine-tenths, it seems to me that the margin for profit is here decidedly the greater.

How many tons of earth ought a farmer to be obliged to turn over and over in order to obtain therefrom a hundred bushels of Corn? Two hundred? Five hundred? A thousand? Five thousand? Other things being equal, no one will doubt that, if he can make the Corn from one hundred tons of soil, it were better to do so than to employ five hundred or five thousand. It seems clear to my mind that, though other conditions be unequal, it is generally well to endeavor to produce the required quantity from the smaller rather than the larger area.

I fully share the average farmer's partiality for barn-yard manure in preference to most, if not all, commercial fertilizers. In my judgement, almost any farmer who has cattle, with fit shelter and Winter fodder, can make fertilizers far cheaper than he can buy them. I judge that almost every farmer who has paid $100 or over for Guano (for instance,) might have more considerably enriched his farm by drawing muck from some convenient bog or pond into his barn-yard in August or September and carting it thence to his fields the next Fall. If he can get no muck within a mile, let him cut, when they are in blossom, all the weeds that grow near him, especially by the road-side, cart them at once into his barn-yard, and there convert them into fertilizers. In Autumn, replace the hay-rack on the wagon or cart, and pile load after load of freshly fallen leaves into your yard, taking them, if you may, from the sides of roads and fences, and from any place where they may have been lodged or heaped by the winds, your own wood-lot excepted. Plow the turf off of any scurvy lot or road side, and pile it into the barn yard; nay, dig a hundred loads of pure clay, and place it there if you can get it at small expense, and your average soil is gravelly or sandy. The farmer who is unable or reluctant to buy commercial fertilizers should apply his whole force every Autumn to replenishing his barn yard with that material which he can obtain most easily and which the trampling of his cattle may readily convert into manure. A month is too little, two months would not be too much, to devote to this good work.—Some may seem obliged to postpone it to Winter; but that is to run the risk of embarrassment by frost or snow, and encounter the certainty that your material will be inferior in quality, or not so well fitted to grain crops the ensuing Fall.

I close by reiterating my belief that no farmer ever yet impoverished himself by making too much manure or by applying too much of his own manufacture. I cannot speak so confidently of buying commercial fertilizers; but these I will discuss in my next.

TO THE FARMERS.

Do you wish to prosper? If you do, stick to your farm, make your regular crop; make up, by using labor-saving implements for the loss of manual labor, cultivate fewer acres, and make your land rich, and you will find that your farm is improving in value, you are enabled to spend more money for fertilizers, to educate your children, to live more comfortably, and lay up something for a "rainy day." But croaking and grumbling, or groaning over what has been is not the way to do it. If you want your land improved, you are the one to do it. If you want enterprise and thrift developed in your immediate neighborhood, you are the one to begin it; if you want two blades of grass to grow where only one has grown before, you are the man to show how it is to be done, and not your neighbor. We are very apt to say, so and so, ought to do this thing and that thing, but perhaps he don't know how to do it, and if we, who know how to do it, would begin, he would follow our example. Let us not try to shift responsibilities, but rather let us reach one, assume our own, and do what we are able to advance our own good and that of our fellow men.—*Roanoke Valley.*

A DISCOVERY ABOUT CORN.

An intelligent and reliable neighbor of ours, who has for years been making experiments with corn, has discovered an importance and value in replanting corn, which is quite novel, and worthy of publication. We have always thought replanting corn was of very little consequence, but this gentleman says, "It is of so much consequence, he replants whether it is needed or not—or rather, he plants two or three weeks after the crop is planted, a hill every fifteenth row each way." He says: 'If the weather becomes dry during the filling time, the silk and tassels both become dry and dead. In this condition, if it should become seasonable, the silk revives and renews its growth, but the tassels do not recover. Then, for want of pollen, the new silk is unable to fill the office for which it was designed. The pollen from the replanted corn is then ready to supply the silk, and the filling is completed.' He says nearly all the abortive ears so common in all corn crops, is caused by the want of pollen, and he has known cars to double their size in this second filling.

[Here is a very important item for our corn-growers, and one that will be valuable to them. The corn-growers of the West practice this plan, so says the *Western Rural*.—Ed. F.]

A Large Farm.

The largest farm in England consists of 3,000 acres, and belongs to a man with the Yankee name of Samuel Jones. In its cultivation he follows the "four course" system, the whole extent of the farm being divided into four great crops—750 acres of wheat, 550 of barley and oats, 750 to seeds, beans, peas, etc., and 750 to roots. His live stock is valued as follows: Sheep $35,000, horses $15,000, bullocks $13,000, pigs $2,500. The oil cake and corn purchased annually amounts to $30,000, and artificial fertilizers about $8,000. The entire cost of manure, in various forms used, annually cost about $15,000. Sheep are claimed to be the most profitable stock he keeps, from which are realized about $20,000 a year. His income from the whole farm, is not stated.

Troubles in Paris.

The storm is brewing, the hidden fires will burst forth ere long, spreading desolation far and wide. But after the storm will come a calm, and the World and Paris, and the Fashions be as before.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 13 per cent; Oil Cake Meal, 23 3-100 per cent. For its sustaining properties to all stock and [illegible] to sudden changes of weather or over-driving! [illegible]

For MILCH COWS, particularly valuable, increasing the quantity of milk and giving it quality to a fat greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the malt of brain, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

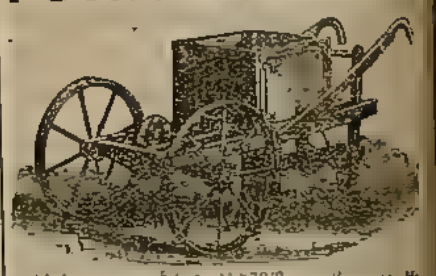
TRUE'S IMPROVED POTATO PLANTER,



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 10 Men in Planting Time.

Makes its own furrow, coils the potato in such distances as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over any ground that can be plowed.

No intelligent farmer can [illegible] that an implement with which one man can, with the aid of a horse plant six acres of potatoes in a day, is of inestimable value, because the days in which PLANTING can properly be done are very few, while he has all SUMMER and YARD in which to cultivate and dig.

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attending to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor-Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with a moment, and a good Mechanic can make a fortune with a

THE JAPAN LILIES.

BY FRANCIS PARKMAN, JAMAICA PLAIN, MASS.

So the varieties of *Lilium lancifolium* are popularly called, though there are many other lilies equally entitled to the name, inasmuch as they also are natives of Japan.

Lilium lancifolium with its varieties is worthy to stand at the head of the whole race of lilies, for it surpasses them all in beauty, without even excepting the new and superb Gold Banded Lily.—A few years ago there were doubts of its hardiness; but, in truth, it stands our winters better than our native lilies, and is much less exacting in its choice of soil.

Now, as to its varieties: first we have the pure white, then the faintly spotted variety, *L. lancifolium punctatum*, then the so-called rose colored, then the red, and finally the deeper red or crimson.

The white variety, *L. lancifolium album*, is without spot or stain. It blooms a week later than the rest, has an excellent constitution, and is very hard to kill. This is the case with *L. lancifolium punctatum*, which seems capable of withstanding severe cold, but, on the other hand, is more liable than any other member of the family to become diseased. It resents frequent removal, and should be allowed to remain undisturbed until the bulbs become too crowded.

L. lancifolium roseum is too often but a mere name, being undistinguishable from the red variety, from which, at the best, it differs only in a lighter shade of the same color. One of the principal Dutch bulb growers lately advertised *L. lancifolium roseum*, "*true*," selling those with this recommendation at four times the price of those which he did not profess to guarantee. Curious to see in what the "truth" consisted, I ordered some of them, but they proved no whit different from scores which were growing beside them.—They were the common *Lilium roseum* and nothing more. A great many, however, are sold under this name, which are entirely undistinguishable from the red variety, *Lilium rubrum*. This last is a superb flower, and is destined to be as familiar in the garden as the beautiful white or Annunciation Lily.

Mr. Hovey has raised a number of seedling Japan Lilies, one of which, called by him Melpomene, is several shades deeper in color than the old red variety, and is a valuable acquisition.

Lilium cruentum is another deep red variety which I received through a friend from Japan six years ago, and which, from its peculiarity of form, as well as its color, is entitled to stand under a distinct name. The flower is very broad and flat, the petals being less recurved than usual, and the color is scarcely less deep than in the Melpomene.

Many other varieties will be found in the catalogues, but not one of them can be distinguished by the unpractised eye. *L. speciosum* is identical with *L. rubrum*, and *L. superbum* (not our fine native lily of this name) does not differ from it the value of a hair.

The only other members of the species requiring special mention are the red, white, and rose colored varieties of *L. lancifolium monstrosum*. These are, as their name imports, monstrosities. Their peculiarity consists in the merging of several small stems into one large one, which is flat and broad, and which branches near the top, so that the number of the flowers is greatly increased, though their size is apt to be diminished. They form at times a large, dense cluster,—white, red, or rose color, as the case may be,—and numbering from twenty to thirty blossoms. That figured in the plate, from a photograph, had twenty-seven buds and flowers. The effect is often very striking and beautiful; but these varieties with aggregated stems seem liable to a species of blight or rust, which sometimes spoils the flowering. The other varieties are also exposed to it in some seasons, though in a less degree. It is one of the few diseases from which this vigorous race is ever known to suffer.

These Lilies grow in any tolerably good garden soil, but to have them in perfection, it should be dug deep—say eighteen inches or more—and mixed with a good portion of coarse sand and well rotted manure, at least two years old. To this should be added peat, surface soil from the woods, or well rotted leaves, either of which will do as a substitute for others. The autumn is a good time to plant the bulbs, which should be set four or five inches deep, measuring from the top or crown. Cover the surface with leaves, tan, or pine boughs, to prevent heaving by frost. They will also do very well if planted in spring; and when once planted they may remain undisturbed for several years. For pot culture they are admirable. Plant them in six inch pots, in a compost like that indicated above, watering very little at first, but abundantly after growth is fully in progress. When the flower-buds form, they may be watered at intervals with a solution of guano mixed with soot. Thus treated, they will flower superbly. Some cultivators adopt a more elaborate method—using a pot much deeper than the ordinary flower-pot, and filling it only to within about four inches of the rim, the upper part remaining empty. When the young flower-stem has risen as high as the rim of the pot, the empty space is filled up with any rich compost. Into this the stem emits roots in great abundance, which help greatly to nourish the flower-buds. Japan Lilies grow well in the green-house, or in a warm and sunny window.

There is no doubt that a time is coming when these Lilies will even surpass their present beauty. I saw the other day a bed of several hundred seedlings, blooming for the first time, in the garden of an eminent horticulturist. They were the results of cross-impregnation, that is to say, of fertilizing the pistils of the several varieties mutually with the pollen of each other, without introducing the pollen of other species. Some of the flowers were of a very large size, with petals two inches wide; and the varying shades of color, as well as the diversities of form, were exceedingly striking and interesting. This offers a flattering prospect of the improvement of the species within its own limits. As to the results of hybridizing it with other species, I hope to have a good deal to say at some future time.

THE CRANBERRY AS AN ORNAMENTAL PLANT.

I do not see how any one, who has ever noticed the delicate foliage and flowers of the cranberry, even when wild and uncultivated, could fail to be struck with its beauty. But my object now is to call the attention of your readers to its value when cultivated in pots, in the house, or, still better, in hanging baskets. When thus grown, the long, slender stems, drooping from the basket, together with the rich fruit, form a most beautiful object.—Let those who mourn that they cannot afford to purchase foreign novelties, make a rustic basket, and put a few cranberry plants in it, and hang it in the window, and they will say they never saw anything more beautiful. O. A.

PATERSON'S SUNRISE MELON.

This extraordinary melon was raised, during the summer of 1869, at Pantypool Park, by Mr. Paterson, gardener to Mr. Hanbury Leigh; it weighed twenty-four pounds, and measured forty two inches in circumference.

It was raised from the Netted Scarlet flesh, crossed with the Black Rock. The fruit is of exquisite flavor, and very handsome, with fine rich scarlet flesh, and, as seen by the dimensions given, of extraordinary size and weight. It produced one hundred and sixty-nine seeds, which is all the stock of it.—[*Gardener's Chronicle.*

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and those cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories, or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,

Farmer Office.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plant

(The Large Bell Variety,)

Ramie Seed, Fresh,

WATERMELON, CANTELOUPE,

AND

MUSKMELON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

MIXED LAWN-GRASS, ETC.

For sale at the "FARMER" OFFICE.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting.

We have them put up in Packages of ONE DOLLAR EACH, MAILED free to purchasers.

WARREN & Co., FARMER OFFICE,

320 Clay Street

The California Farmer.

SAN FRANCISCO:
THURSDAY EVENING MAY, 26th., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our *Journal*, to which we would direct their *special* attention.]

We have a glorious letter on "Preaching," in the correspondence of our able writer from New York, a moral and Religious Sermon that is most admirable—we are proud of it—there is virtue in it.

Our European Letter should receive special attention, for the valuable information it gives us.

The *Overland Monthly* for June, is before us, it maintains its high and excellent reputation for our own resources and capacities to have a Literature of our own.

The *Overland Monthly* should be found on every table in every family in our State, that claims to be Californian in spirit.

FALSE NEWS.

We spoke last week of a large paper sent out of a "Hundred thousand," with erroneous news. By reason of illness we could not complete our review this week, it will appear in our next issue.

OUR AGRICULTURAL COLLEGE.

Letter No. 2, with some important items, will appear next week, when we hope to announce the the time for laying the "Corner Stone."

COMPLIMENTARY.

We acknowledge complimentary cards of invitation to the Exercises of Memorial Day, of the Grand Army of the Republic, which are to take place at Platts Hall on Monday Evening next.

Oration by A. L. Stone, D. D.

LAUREL HALL.

We acknowledge cards of Invitation to the Anniversary Exhibition of the Pupils of this very popular Institute of Education for young Ladies, at San Mateo, under the charge of Miss. Buckminster as Principal.

The Anniversary Exercises were Tuesday, Wednesday, and Thursday of this week,—closing by the Graduates Exercises this (Thursday) evening.

YOUNG LADIES SEMINARY AT BENICIA.

We acknowledge cards of Invitation to the Anniversary Exercises of this excellent Educational Institute—one of the earliest Female Academies in this region, now under the charge of Rev. C. T. Mills & Lady. Exercises, Wednesday and Thursday, day and evening—the Graduating Exercises this (Thursday) evening at the City Hall.

We acknowledge the reception of numerous Cards to Pic Nics, Festivals, Parades, etc., for which courtesy we return thanks, regretting that it is impossible to be present, by reason of ill health, and as important duties at our post prevents us the pleasure of attending.

SPECIAL PREMIUM TO STOCK RAISERS!

WITH a desire to awaken a greater interest among our STOCK RAISERS, and to enlist them in STUDY of all the new things in STOCK RAISING, and to induce them to read and see what is being done in other States in STOCK RAISING,

WE PROPOSE

TO PRESENT to all who shall subscribe for our NEW VOLUME that commences in JULY, a copy of the STOCK JOURNAL, as a Premium,

FREE FOR ONE YEAR

to all who send us THEIR NAMES as subscribers to

THE CALIFORNIA FARMER.

WE will send the STOCK JOURNAL from June 1st., and also send them the FARMER for one year, for the Subscription of $5,00.

WARREN & CO., Farmer Office.

THE SEASON, CROPS, &c.

The season roll on "Seed time and Harvest," "Summer and Winter," each in their turn, and the world keeps rolling on.

We have had in the newspapers of the day, from all parts of the State, various reports. We have had hot weather, dry weather, north winds, drought, and loss of crops, and almost "Famine and Starvation"—but the *end is not yet*, and after all these mere sensational paragraphs the same journals that reported the "loss of crops" will all begin to say they were *misinformed*, or it is "better than was expected," the crops have been "greatly improved by the late rains," or they will turn out "a good average," or "equal to last year."

For our own standpoint, personal examination, or from the most reliable sources, we state now the fact that we believe cannot be disputed, that there are no loss of crops except those late planted upon poorly tilled soil—and such unwise farming must always *go to waste*. If our farmers will read the newspapers from all parts of our State, they will find our words verified everywhere.

Good, wise cultivation, summer follow, deep plowing, early planting in this dry climate, will always ensure a good crop—unless it be on *starved land*—even with all the efforts to prepare the soil. If that soil has been cropped year after year and nothing returned to it, crops *must die out*. This is *one* and a good cause of loss of crops this year in many places. Starved soil and poorly plowed will not stand dry weather—a man or beast needs *food* as well as *water*.

These intelligent culture will prevent loss of crops and greatly counteracts the changable seasons, we urge our farmers all to read the "GREELEY ESSAYS" which we publish every week in the Agriculture Department. Finally we assert our belief that our crop of cereals for 1870, will be in their total larger than last year.

The Fruit crop promises to be generally abundant.

Strawberries have been and are now abundant but declining in the quality. Price cheap.

Cherries are coming in plentifully and are fine. Price reasonable.

Raspberries and Currants are coming in slowly, and bring good prices.

There is a complaint that fruit is packed deceptively, "topped off." It is reported by the fruit-dealers that attention will be given to this subject and the names of those who thus pack fruit, reported publicly.

SHIPPING FRUIT—FRUIT BOXES, &c.

The subject of Fruit Boxes, for the shipment of fruit to the Eastern States, is now one of great moment to our Fruit-growers, and it is one that affects the general interests of our State.

There has been two meetings held in our city recently by our fruit-dealers, for the purpose of divising the best means of shipping fruit, *when*, *how* and *where*.

At the first meeting some seventeen persons were present, including reporters, strangers, &c. There should have been a better attendance. At this meeting little was done, save the appointment of a committee to wait on the Directors of the Central Pacific Railroad, to see if a reduction of rates of freight could not be had, so as to enable our fruit-growers to send their fruit abroad with profit.

S. B. Davis, Esq., of Chicago, was present, who gave the meeting many very valuable statistics in relation to the great market of Chicago that could be opened to them, if a proper system was adopted for such an enterprize, assuring them that it could be done with profit to the growers and a great benefit to our State.

A second meeting has been held; Committee on Freight reported that no reduction could be had, and the meeting adjourned *sine die*.

We esteem the cause of non-success to the meeting and Committee was the want of a union of interest and purpose, *somebody* wants the *buttered side of the loaf*, the rule and control of all the business, and all the profits, and our hard working growers won't submit to it. We have conferred with the Directors, and find them ready and willing to do all that is fair, liberal and right, but cannot alter their regular lines and time of travel for a *few tons* of freight.

When a regular system of business is had, and a reliable plan adopted, as it will be done, and by parties with experience and means, the Railroad Directors will be found to be liberal and generous too, to help the industries of our State.

Mr. Davis of Chicago, alluded to above will remain in our city and open a Warehouse here to receive fruit for shipment to Chicago. His experience of twenty years will enable him to do a successful business, and be a large purchaser and render essential service to the Fruit growers of our State.

TAKING THE CENSUS.

This all important action on the part of the National Government, is like that of the Merchant taking account of stock, the people are the treasure of the Nation, and every ten years the account is taken.

Hon. W. G. Morris has just returned from Washington under the full confidence of the Government, as the man fitted for the all important post and in the Office of U. S. Marshall to "Take the Census."

We have confidence it will be well and faithfully done—and here we would speak a word for our own State, CALIFORNIA.

Marshall Morris could do our State a very great service if he will instruct his Agents and Deputies to be careful in relation to all other sources of wealth besides men, women, and children. We need the correct account of acres under cultivation, crops, etc., and if it can be done correctly, now is the time. County Assessors heretofore have not given us the correct data—will not our Marshall do this for California?

The Census now being taken will amount to Seven Hundred Thousand, at a Yankee guess.

IMPORTANT INFORMATION FOR FARMERS

THE AGRICULTURAL AND OTHER USES OF THE BY-PRODUCTS OF GAS MANUFACTURE.

We regret to remark that our branch of industrial Chemistry is comparatively neglected among us. The utilization of the amoniacal liquor and refuse lime, and to some extent, of the Coal Tar, which are produced at the Gas Works in large quantities.

The first is easily convertible into salts of Ammonia; the second possesses certain valuable fertilizing properties; while the third, beside its every day applications to roofing, paving and the preservation of wood, is rich in the most brilliant coloring matters.

The important value of ammoniacal liquor is most readily made available by its conversion into sulphate of ammonia. The crude sulphate sells at about $150, per ton of 2,000 lbs, and besides being used for agricultural purposes, is the salt from which all other preparations of ammonia are obtained. Distilled with quick lime, it yields free ammonia, which by condensation in water, becomes the liquid ammonia of the shops. Distilled with chalk, it makes carbonate of ammonia, and it has other applications.

Now twelve pounds of the sulphate may reasonably be assumed as derivable from a ton of coal, and it is therefore evident that the great establishment which lights our city affords a handsome opportunity for investment in its manufacture.—We do not of course, assert that the supply of the raw liquor, or the demand for the products, or either of them, is large enough to support such an establishment as that of Powers and Weightman, of Philadelphia, or of the Lamings of London.—But these conditions are sufficiently favorable for works of a moderate size in the hands of an industrious and experienced chemist.

The manufacture of Coloring Matters from Coal Tar might profitably be conducted under the same roof. From the three derivatives of Coal Tar,—Aniline, Carbolic Acid and Naphthalin—are produced on a commercial scale, an almost endless variety of dyes. The most of them, we are sorry to say, disfigured by such titles as "Harmaline," "Fuchsine," "Azaline," "Aurine," etc., etc.

We now come to what is to most of our readers, the most important portion of this notice; the advantage, in an Agricultural sense, of the refuse lime from Gas Works.

As is well known, the hydrate of lime is almost universally employed for the separation of the sulphur compounds, of ammonia, and of carbonic acid, from the gas. Saturated, or nearly so, with these impurities, the refuse lime may be obtained at a much more reasonable rate than other forms in which lime is employed in Agriculture. It should however, be submitted to soils.

In regard to its specific advantages, Dr. Volcker, Professor of Chemistry to the Royal Agricultural Society of England, says:

1st.—"Gas Lime exercises a beneficial mechanical effect on land, by rendering stiff, heavy clay lands friable, and consequently better adapted for cultivation, and by consolidating on the other hand, light, sandy soils.

2d.—"It supplies food to plants. Gas lime not only supplies lime to plants, but also sulphuric acid—a combination not present in any quantity in quick lime. For leguminous plants, such as peas or beans, for clover, and for other crops especially benefited by sulphate of lime or Gypsum, gas lime, when obtainable—as is generally the case—at a trifling expense, is certainly preferable to quick-lime as a manure.

3d.—"Gas Lime, in virtue of its alkaline properties, exercises a beneficial effect upon the organic matters in the soil. In this respect its action is similar to that of quick lime. Both facilitate the destruction of organic matters, the remains of previous crops, and their conversion into plant food.

4th—"Gas Lime, like quick lime, has the power of unlocking, so to say, the naturally unavailable mineral stores of plant food in the soil. In many soils we find portions of granite and other materials from which clay has originally been produced. Gas Lime, like quick lime, naturally hastens the decomposition of these, rendering the potash or soda soluble, or available for the use of plants, and thus produces an effect similar to that of a prolonged fallow."

These statements and extracts prove that a considerable source of wealth exists in these residuaries, and we trust that this brief article will attract the attention of Chemists and Farmers.

We are prevented by lack of space, from publishing Dr. Voelcker's valuable report in full, in this issue; but will do so in our next. We presume that test samples of the three products may be obtained, free of charge, from the Gas Company.

NEW TELEGRAPH LINE.

A number of the students of the State University School, have organized themselves into a Telegraph Company. They have placed all the buildings in communication and have six offices.—[*Oakland Termini.*

Now we protest against Oakland being the *termini* of all the *news*, or the head quarters of it either, and if Oakland claims to be the Head Quarters of Literature, Fashion and Wealth, we hope it will pass the *News* along.

One thing we desire most particularly, i. e., that these young Students now thirsting for all the news intelligence of the day, will do us the favor to Telegraph us the progress of the *Agricultural Department of the University*. We are most anxious for this, on account of the many that inquire of us for this important Department,—see letters last week. Will the Students keep us advised and we will send them a Donation, and remember them in our Will.

GRASSHOPPERS.

The Mariposa *Free Press* tells us that the Grasshoppers infest Cathey Valley, and count by millions, but does not report the damage done.

BOSTON BOARD OF TRADE! BOSTON.

How every New England heart beats at the magic word, "Boston"—however much may be said of the "Yankee haters" and of Boston, that noble City and her Merchants, her example and her influence has been, and is felt, the wide world over.

Great as is her wealth, greater by far have been the mightier power of her moral and intellectual influences.

That noble City of Boston, will by her Representatives, her "Board of Trade," be represented here in our Emporium City on Tuesday evening next. And these men come to us as Men, Brothers coming from one part of our common Household to meet the Brethren of the other portion of the same Household.

Let them come say we—God Bless Them. Let them come, and let the most generous spirit of Manhood go out to greet them, not with adulation or vain show and mockery, but with a genuine welcome.

We then show our natures by the manner we receive and welcom such men.

We are not in favor of public feasting and great Dinners, for there is a better way. Let these Representative men be invited to meet the citizens of our state at the Pavilion and then and there let us greet those who, many of us have not seen for over twenty long years. This would, by a warm grasp of the hand be a "Feast of reason, and a flow of soul," and be of more real practical good than any other course that could be adopted, for then thousands, could meet and greet them, where otherwise only a few. Will not our Chamber of Commerce give this invitation for our People?

THE CAUSE OF EDUCATION.

The past and present week has been the great and important week to all pupils of our Colleges, Seminaries and Schools generally, Public and Private. For pupils have been brought before their judges for examination, that it may be known who have improved the golden moment, of their lives.

By reports, a good and happy result has been and will be attained. This week closes nearly all our Public and Private Schools. Vacation comes, and with it Prizes, Rewards, cessation from labor, home greetings, Pic Nics, and—Rest! aye Rest for the weary Teacher, and play for Pupils.—This vacation also gives to our Teachers the opportunity for a large number of them to go East to their early Homes and be Happy. God and Peace go with them.

ONLY ONE SIDE.

We clip the following from the *Oregon Statesman* of May 6th—which says.

"Mr. W. M. Snyder, of Scio, has just returned from San Francisco, where he disposed of a large amount of chickens and eggs at fair prices. He informs us that he visited the San Jose and the San Joaquin Valleys, and while in some instances crops look well, in many they have suffered severely from drouth and will yield small returns. He represents much of the farming region in that country as 'burnt up' by dry weather, and he saw them cutting barley to save it for hay, there being no probability of its yielding in other ways."

Here the statement is from mere *here say*; Mr. Snyder informes us, etc.

Now we protest against this hear say evidence, because it does great injury to our State, by preventing the right kind of people from coming to our State often.

Mr. Snyder may have passed over the Western Pacific Rail Road, and seen the famous Livermore Valley, District, where shallow plowing, and late planting was the only causes of the failure of the crops, for above and below that region as fine crops can be seen as could be desired.

Evidence pours into our Sanctum, both written and verbal—all showing that wherever proper tillage has been had, crops are good.

We hope the Newspapers abroad will endeavour to be just to our climate and soil, by not sending out so many reports of the failure of the crops, from mere hear say.

We shall give proof in this number, of good crops—enough to satisfy all doubts about our general harvest—which we again say will be a good one, and equal, and greater than last year.

HOT WEATHER—NORTH WINDS—CROPS.

The recent hot weather and the scorching north winds has tried some of our crops, and tried some of our farmers' system of shallow plowing. Where grain has been injured by this scorch either of sun or wind, it will be found the hull of the grain seems scalded, and is without any farina; it will by the cool weather that followed recover in part, but had the soil been better and deeper plowed when the scorch came, the roots would have sent up more moisture and saved the heads, but shallow plowing choked the pump boxes of nature and the grain suffered. The late generous showers may help it a little.

SPRING LAMB'S FLEECE.

A new thing among sheepmen is reported from Merced County, a flock of 1300 lambs dropped in January and February have been sheared, yielding an average of 2¼ lb, some few gave 5 lb. This is a rare thing to shear lambs, we believe the first instance of the kind. Messrs. Buckley Brothers, owner of the flock, which were of the Cotswold grade, sent 30 bales of this wool to market.

We give the item to show to sheep-raiser abroad what our climate is for sheep raising.

STOCK FOR OUR MARKETS.

Cattle, sheep and swine are now coming to this market by railroad from all the different quarters of our State—from Los Angeles, from Butte counties by our railroads in freighting live stock.

Home Correspondence.

THE TRAVELLER'S SKETCHES.

RAIL ROAD TO CHICAGO.

EDITOR CALIFORNIA FARMER:

After one of the most delightful trips, on one of the finest Railroads in the world, in the finest and most comfortable coaches, passing through the grandest scenery, through the most fertile as well as the most barren land on the globe, we reached Chicago in due course of time. The best description we can give of Chicago is "it is a great city a fine city, a wealthy city, and a city which controls the whole trade of the great Northwest; it is the centre of Commerce of that great region.

Californians and their institutions and products are not only well represented here but on mode of dealing and Gold basis is highly appreciated. Every one speaks highly of our fruits sent to them last year, and they await with pleasure the arrivals this summer. Our Pioneers last year I hear was greeted as old friends, and entertained the short time they remained beautifully.

The Pacific Insurance Co. of San Francisco, represented by that energetic and able Fire Underwriter, Charles C. Sutton, is doing a splendid business. The wise interest is well represented by the well-known house Stern, Perkins & Co. Of all the California institutions, the Mutual Life Insurance Company of Sacramento, has made its most friends, and I am told done a large business, even at a time when but little business could be obtained. Mr. Schreiber, one of the General Agents from the home office, set the ball in motion, and by his energy gained a business hardly ever obtained by a Company during the first year in a strange country. Mr. Schreiber has been more than fortunate in securing for the Chicago office, Mr. Ryan, its present manager, and the gentlemen will give a good and profitable account of his stewardship cannot be doubted. The office of this Company is the headquarters of all Californians, where all courtesy and assistance is extended to them by the gentlemanly employés. The value of this solid institution has been soon discovered by the smart Western men.

More Anon.

[It will be seen that Californians are up with awake as the Chicagoans, and that we place our Best Insurance Company there to lead off in the business—good for San Francisco.—ED. F.]

LOS ANGELES COUNTY.

The Los Angeles *News* of May 21st, reports:

WOOL SHIPMENT.

At the present writing $350,000 of wool has been shipped from Los Angeles, all of this year's clip. This is exclusive of the amount received from Fort Tejon. This amount is the largest ever shipped hence in the same period of time.

ARRIVAL OF CATTLE.

E. W. Boyce arrived here from Arizona Saturday night with seven hundred head of fine fat cattle. If not sold here at satisfactory rates the herd will be driven to San Francisco. The animals are in splendid condition.

[Strange change! formerly our beef cattle came from that region, now they are purchasers—how is this? is it that cattle are all sold, and hay farms are out up? Well be it so, it is better for all.—ED. F.]

HAY.

Hay is plentiful in the market. The ruling rates appear to be $12 to $13 per ton, loose; bales a shade higher.

AGRICULTURAL STATISTICS.

Tables carefully compiled by our Government authorities show that in 1868 there were planted 36,000,000 acres of Indian corn, which produced 1,000,000,000 bushels—value, $5,700,000; wheat, 18,500,000 acres, giving 3,250,000,000 bushels—worth $3,360,000; oats, 10,000,000 acres producing 2,150,000,000 bushels—value, $150,000,000; potatoes, 1,125,000 acres, giving 100,000,000 bushels—value, $84,000,000. The average yield and value per acre of each of the above productions for 1868 is shown below:

Production.	Bushels.	Per Acre.
Indian Corn	25.9	$16 37
Wheat	12.1	17 39
Oats	16.3	14 74
Potatoes	93.7	74 35

One or two decades since, the averages of these staples were more than twenty-five, and of wheat and oats not much less than fifty per cent. above the showings.

IRELAND, HER ACRES.

Ireland has four hundred and forty acres thousand and seventy-one acres under crops, nine millions nine hundred and ninety-nine thousand three hundred and ninety-three grass or pasture, twenty-two thousand one hundred and ten fallow, and three hundred and twenty-two thousand three hundred and fifty-eight woods.

It will be seen that Ireland has millions of acres of green grass pastures, and this is the reason of her "*wearing the green.*"

CALAMITIES.

We notice with deep regret the severe injury that occured to Judge Shafter of this City, by being thrown from a Buggy.

Mathew Keller Esq., the Wine Merchant of Los Angelos, was also badly injured by being thrown from a Buggy at that place.

These calamities seem to be on the increase, why is not more care observed by our citizens—it would seem that these things could be prevented by proper care. The lives of such men are of too much value to be thus exposed.

Why does a wheat crop greatly exhaust the soil? —Because, it absorbs the *carbon* and the *azote* which form the straw and the grain.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

CALIFORNIA PLANTS.

We have received from Messrs. Roman & Co., a valuable treatise, just prepared by our late State Botanist, who, distinguished as a Botanist, has carefully prepared a list of Plants growing in the vicinity of San Francisco, and published it in Book form. It is a neat Quarto Volume, of 42 pages, containing many thousand varieties—all carefully and scientifically arranged in their several classes, and orders.

This Volume reflects great credit upon the author, and the work should be widely used in our Schools and Libraries.

NEW BOOKS.

Bancroft's Guide Book for May. We have received from Messrs H. H Bancroft & Co., the May number of their valuable Guide Book for the traveller—by Steam, Stage or Rail Road. A very comprehensive and valuable Book for the traveller.

NEW NOVEL.

Lothian, by Right Hon. B. Disraeli. This Novel by the authorship of this distinguished name, will like all his works, command great public attention, extensive reading and criticism. Published by Appleton & Co., N. Y., and for sale by Bancroft & Co.

NEW STRAWBERRY BOOK.

Another New Book upon the Cultivation of Strawberries, has been issued from the press, bearing this title, "The Strawberry and its Culture," with a discriptive Catalogue of all known varieties. This Book has been prepared by J. M. Merriat Jr., Esq., of Boston, and published by Messrs J. R. Tilton & Co., the well known publisher of the "Journal of Horticulture," of that City.

A hasty glance over its pages gives us assurance that there is much that will interest our readers. We shall therefore give from its pages in our next. We are indebted to Messrs A. Roman & Co., for a copy of the work, who have the Book on sale.

THE NEW RUSSIAN NEWSPAPER.

We have received No. 1, of the *Slavonian*, a newspaper just issued in the cause of the Russian Church interest, Edited and Published by N. Kovnigin, Pastor, and Jos. Lugabel as Editors and Proprietors.

The *Slavonian* will be published in English and in Russian, and will present from time to time the great interests which should bind the Russian kingdom with, us in bonds of peace and amity. We shall speak more on this subject hereafter.

We have received a copy of the "Pastoral Letter," of the Rector of the Church of the Advent, to his Congregation. Such a Document is a valuable one to the members of any Church and Society always, as it shows the relations held, and the interest which unite Pastor and People, and serves to make them better and happier.

We are indebted to Hon. Eugene Casserly, for Documents from Washington, for which we return thanks.

GENERAL NEWS ITEMS.

CROPS IN CALAVARAS.

The Calavaras *Chronicle* of May 14th, says:

Crops were never better in this vicinity than they are at the present season. Grain is looking finely, and is nearly ready for harvesting. Haying has commenced in good earnest. Whichever way we turn, our ears are greeted with the ringing music of sharpening scythes, and our olfactories delighted with the scent of new-mown hay. Our farmers are pre-eminently fortunate. In many sections of the lower country the drouth has cut off the crop entirely, and pasturage is already exhausted Grain and hay must necessarily be extremely high during the present year, affording a ready market for those who have a surplus. Mountain ranchers are in luck for once.

FISHING.

A chance for Isaac Walton.

The Vallejo *Chronicle* of May 10th, says:

From an actual resident of Lake county, and by the way, a disciple of Izaak Walton, we learn that there are three lakes, known as the Blue Lakes, situated on the road from Upper Clear Lake to Ukiah in Mendocino county. This, of itself, is nothing improbable; but these lakes are inhabited, by not a serpent, but by fish, and fish of immense size Many persons living in the vicinity of these lakes have frequently seen them, and they are represented as being from ten to fifteen feet in length. James Parrish, of Lake port, is at present engaged in preparing tackle for the purpose of trying to capture one or more of these scaly monsters. When it is known that these lakes are situated in a mountainous country and have no communication whatever with any other body of water, the fact of their being inhabited by such large fish is quite remarkable. One of the lakes has been sounded to the depth of three hundred feet and no bottom found.

Undoubtedly these fish came up from below through "Syme's hole" which the world has heard so much of but never found.

VENTILATION.

Farmers should see to it that their stables have proper vents for fresh air for their stock, as it tends, as much as anything, to the promotion of good health and healthy appetites, and as every adult human being inhales about sixty gallons of air per hour, the necessity of attending to proper modes of ventilation in close apartments is very desirable. But how often we find upon entering a cow stable of a large dairy, the air stifling, and we are glad to retreat as soon as possible. No wonder that for want of pure air and proper cleanliness, so many dairies are divested of choice animals. A word to the wise is sufficient.

SONOMA COUNTY NEWS.

The Petaluma *Journal and Argus* of May 21st says:

THE COUNTY FAIR.

Though the time is not definitely fixed upon, yet it is pretty well understood that our next County Fair will take place about the last of September or the first of October next. We are glad to report that the management of the Society has fallen into good hands and that every endeavor is being made to render the coming exhibition superior to any yet had. We hope that our citizens, and friends of the institution generally, will lend whatever aid they can to the furtherance and success of the Society, as at the coming exhibition there will undoubtedly be many persons here from the East, and elsewhere, in search of homes and places for investment, who will naturally turn to our agricultural exhibitions as a safe criterion whereby to judge of the products and yield of our soil. Therefore, not only through selfish motives, but for the credit of the whole county, it is desirable that all should take a deep interest, and endeavor to make the exhibition a perfect success.

[The Press over the whole State should wake up the dilatory Directors of Fairs. Here it is near June, and not a single public notice of Fairs yet, while the fact is daily reiterated of thousands coming to our State to note our *products*, climate, &c. Stir them up, country papers, they need it. —ED. FARMER.]

FINE GRAIN.

Mr. Israel Cook of Vallejo Township, exhibited in town yesterday, samples of wheat, barley and oats, from his ranch, ranging in hight from 5½ to 7½ feet, and well headed out. The barley was sown in January fad down; the samples shown, therefore, are of a second crop.

RAIN.

A nice little rain shower visited this locality last Thursday. Rain commenced to fall early in the morning, and it continued showery until noon, when the sun broke out clear and pleasant. We fear that some of our farmers had their hay damaged.

PERSONAL.

Before the next issue of this paper reaches our subscribers the senior editor expects to be on his way East, to visit his old home and the friends and scenes of early days, after an eighteen years' absence. We arrived in California in 1852, and in 1855, came with the first press and type to Petaluma, where we have since resided, with a slight intermission, engaged in the arduous duties of journalism. We need rest and recreation, and going for such purposes, we cannot promise our readers that they shall hear from us till our return. We leave the paper under the sole editorial care and responsibility of the associate editor, feeling that "all will be well."

[We have long known neighbor "Weston" of the *Journal and Argus*, as a real working man. We are glad he can go and take a respite. We should like it much. Well! a pleasant trip, neighbor, and may it be indeed a pleasant and refreshing trip to you.—ED. F.]

HOME INDUSTRY.

On last Saturday Mr. T. T Uuckless, proprietor of the Washington Stable, called our attention to a couple of fine new carriages, built to his order by Messrs. Fritsch, Stafford & Co., of this city, which for style and comfort will do honor to any livery business. With these additions Mr. Uuckless is prepared to furnish his patrons with a first-class turnout at short notice.

TOMALES WAREHOUSE COMPANY.

Geo. W. Burbanks, Warren Dutton, Thomas J. Ables, N. L. Allen, O. W. Turner, James P. Whittaker, Henry Hall, and George Bunn, Esqrs have filed articles of incorporation of a company to be known as the "Tomales Warehouse Company." The object of said Company is to transact a General Forwarding and Warehouse Business. Capital stock, $20,000, in two hundred shares of $100 each. Duration, twenty years. Principal place of business, Tomales. Trustees—Geo. W. Burbank, Wm. Jones, Warren Dutton, Geo. Bunn and Henry Hall. Date of incorporation, April 23d, 1870.

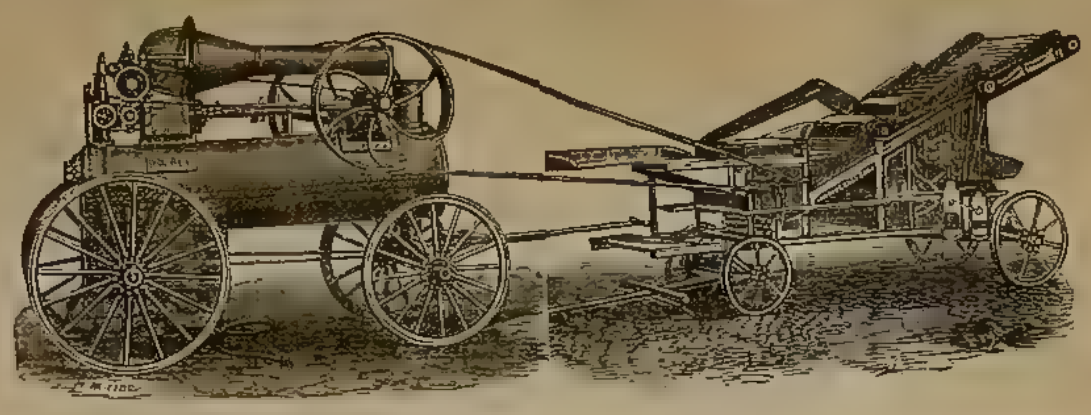
"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 42 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs,—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails.

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRIZES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Eds. and Prop'rs.

Young Man Wanted.

We want a smart and active young man from 12 to 15 years of age, to attend to our Reading Room and Museum, Mailing Papers, etc.

None need apply who cannot bring the best testimonials of character and ability. Must be a good penman and quick at figures.

To such a young man an opportunity of advancement will be given.

A young man whose parents or friends reside in the city would be preferred.

Apply at our office only between 4 and 5 P. M.

No parcels to be above *four pounds.*

All parcels should be carefully done up and sealed.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to out gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER."

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the Improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to,

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

32 12, GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

AMERICA FREE!

BY O. W. ELLIOTT.

O Liberty! whose hallowed name
The froward world hath mocked so long;
Whose smothered rage and crimson shame
Bore witness to thy cruel wrong;
Behold, where late a chattel stood,
With woful look and weary hands,
And back all scarred with scars and blood,
A proud, enfranchised soverign stands—
Where heavy lash and galling chain
Henceforth shall hiss and clank in vain!

Sweet spirit of the olden time,
When honor, wealth and battle-blade,
With a devotion all sublime,
Against oppression's curse were weighed,
Give welcome to the march of Truth,
With laurels o'er her pathway cast,
The prize that nerved the nation's youth
Securely in her hands at last!
Her heralds shouting to the morn,
"All men are Free and equal born!"

America! the Stripes and Stars
No more shall hold thy sin aflame—
Bad streaks of gore the rosy bars,
The stars thy night of sullied fame—
But, sanctified in sacred fight,
Will evermore a symbol be
Of Wrong's great overthrow by Right—
The Beauteous Banner of the Free,
Whose dyes will prove, as now unfurled,
A beacon bright for all the world!

SPRING.

Hail, dawning Spring! what bringest thou?
Balmier days and gentle showers
To wake to life this world of ours;
Sunshine and shadow, smiles and tears,—
My gifts to man his mortal years;
These, these I bring.

Hail, welcome Spring! what bringest thou?
Singing birds and tender flowers
To bless this pleasant world of ours;
Life, health and happiness for some,
Sickness and death for many a one;
These, these I bring.

Hail, gentle Spring! what bringest thou?
Gifts of love that overpowers
Christian hearts in this world of ours;
Healing balm for the anguish given
From the God of earth and heaven;
These, these I bring.

Hold regal sway, dear God of love,
Through all the dark and bright to-morrows,
O'er every heart in this world of ours,
O sanctify each joy we know,
And reconcile our minds to woe,
While here below.

Maplewood, L. H., in *Watchman and Reflector*.

POISONOUS EFFECT OF ORANGE PEEL.

Now that oranges are in every child's mouth in California, it is well enough for parents to know that fatal consequences may follow the swallowing of the rind. Many years ago we had in charge two little girls, sisters, four and six years of age, who were seized with violent inflamation of the bowels from this cause. One of them died in convulsions, and the other had a narrow escape.—Since that time quite a number of instances similar in character have come under our observation. Quite recently we have seen a child something over a year old, that was attacked with violent dysenteric symptoms for which no cause could be assigned. The attack came on during the passage of the steamer from San Diego. The symptoms were so identical with those which we had previously noticed to arise from poisoning by orange peel, that we were induced to inquire particularly if the child had had an opportunity of getting this substance in its mouth. We were informed that it had been playing with an orange and nibbling at it just before the attack of disease. The discharges from the bowels were frequent and consisted of blood and mucus. After a week of severe enteric inflamation, the child died. We have no doubt that the disease was brought on by the rind of the orange. Though but a small quantity must have been swallowed, yet a very small quantity of such an indigestible and irritating substance will often produce most serious consequences. The oil of the rind is highly acrid, and adds greatly to the noxious quality of the indigestible mass. We learn that it is a common practice among the children at some of our public schools to eat the rind, and that juvenile merchants have been known to trade off the inside of the fruit for the skin.—[*Pacific Medical and Surgical Journal.*

Mind Your Own Business.

To tell a man to his face to mind his own business, would be considered about equal to knocking him down. And yet it is one of the simplest rules of right conduct, and the most useful that mankind can adopt in their intercourse with each other. There is a great deal of the Paul Pry spirit in the human heart, or wonderful inquisitiveness in regard to the personal and private affairs of friend and neighbors. This spirit makes more mischief in the community than almost any other cause, and creates more malice, envy and jealously than can be overcome in a century. Let every man mind his own business, and there will not be half the trouble in the world that there is at present.

THE WOMAN QUESTION, AND BABIES.

The "*Revolution*," the Womans great organ has changed hands, and with new managers will stir up the woman spirit with new zeal.

We clip the following from a recent number, and ask the reading of it, for its potency.

"The great want of the women is money—money for their personal waste, and money to carry out their plans. I propose that they shall earn, that they shall consider it as honorable to work for money as for board, and I demand for them equal pay for equal work. I demand that the bearing and rearing of children, the most exacting of employments, and involving the most terrible risks, shall be the best paid work in the world, and husbands shall treat their wives with at least as much consideration, and acknowledge them entitled to as much money as wet nurses. The meaning of this is, that wives are about to strike for greenbacks; so much for every baby born. No greenbacks, no more sons and daughters. No greenbacks, no more population; no more boys to carry on the great enterprise of the age. The scale of prices for maternal duties are as follows:

Girl babies	$ 100
Boy babies	200
Twin babies	300
Twins (both boys)	400
Triplets	600
Triplets (all boys)	1,000

Terms: C. O. D. No credit beyond first child the motto being, 'Pay up, or dry up.' Husbands who wish to transmit their names to posterity will please notice and take new departure."

Here is a challenge with a vim. Now, we do not want to quarel with the *Revolution*, but we ask every intelligent reader, if these strong minded women who have claimed that women are *equal* to men, and some of them to be vastly superior to all mankind, if by this very article they have not *stultified themselves*, for while they claim equality they only put down the value of Girl Babies at *one half price*.

The *Revolution* printers must have made a mistake and reversed the figures, for to have this stand, would completely upset all efforts to secure *equal suffrage*, for this shows women are not equal.

Mrs. Cady Stanton! do you endorse the doctrine that girl babies are only worth *half price*? We wait the answer.

The *Revolution* gives the following good news:

"The New York Sorosis has adopted the sensible resolution, that 'if an effort should be made to revive the dirty and disgusting fashion of trailing skirts in the street, that the universal voice of American women should utter a protest that would be heard throughout the country and Europe, and prove that whoever may choose to follow the senseless lead of a Court or a coterie, American women can think and act for themselves.'"

The following news shows that common sense is returning to girls and women.

"One of the very best signs of the times is found in the fact that quite a number of educated and intelligent young American girls are applying for admission into families as nurses and to do upstairs work. They have found sewing hurtful and unremunerative, and have conquered that dislike to *domestic* service, which young American girls so generally feel, sufficiently to make a trial of its possibilities. We hope housekeepers will so far appreciate their courage and willingness as to afford all the encouragment possible in their undertakings. A superior class of nurses and domestics is just what American housekeeping needs if the ladies of the family cannot 'do their own work,' as the phrase goes, and our great, generous, well-provided homes are the proper refuge for young American women who need shelter and employment."

ABOUT BABIES HERE.

Hear what our own newspapers say:

We challenge the world to produce finer looking children than are to be found in Oakland particularly, and in this county generally.—*Evening Termini.*

We don't know what the world *can* do in the produce business, but we will back Woodland against her, or Oakland either, when fine babies are to be produced—for inspection.—*Yolo Mail.*

The Exchange from which we clip says:

We think both journals are right; at least one would think, from examining their columns, that they were presided over by babies, whether they are fine or not.

We don't think our neighbors should be jealous of each other, for these natural flowers grow spontaneously everywhere. Undoubtedly *Woodland* flowers are fair, and the *Oakland* products have *Merrit* also, so don't dispute, neighbors, but strive to see which will produce the *most*, the Fairest and the BEST.—Ed. F.

Medical Properties of Eggs.

The white of an egg has proved of late the most efficacious remedy for burns. Seven or eight applications of this substance soothes the pain and effectually excludes the burned parts from the air. This simple remedy seems preferable to collodion or even cotton. Extraordinary stories are told of the healing properties of a new oil which is easily made from the yolk of hens' eggs. The eggs are first boiled hard, and the yolks are then removed, crushed and placed over the fire, where they are carefully stirred until the whole substance is just on the point of catching fire, when the oil separates and may be poured off. One yolk will yield nearly two teaspoonfuls of oil. It is in general use among the colonists of South Russia as a means of curing cuts, bruises and scratches.

Every family should prepare a bottle of this valuable oil.

Worrell, the clown, and father of the once amoss, but now deceased, Worrell Sisters, is a man of wonderful mind, and a graduate of Harvard College. The girls take after him.

PLYMOUTH CHURCH, BROOKLYN, N. Y.

REV. HENRY WARD BEECHER.

Plymouth Church, of Brooklyn, and its earnest, enthusiastic pastor, are well known throughout the country. And the fact that on the beautiful Sabbath that ushered in the month of May ninety-eight persons united with that church, is of interest to many outside the immense throng present on that occasion. The first Sunday in May has been regarded as a sacred and joyful anniversary in Plymouth Church since about eleven years ago, when two hundred individuals together made a public profession of their Christian faith. On this last May morning the platform, which is the pastor's pulpit, was fragrant with the choicest flowers, arranged in elegant vases and massive stands, while a double border of mosses and trailing arbutus encircled the entire platform. Some of the flowers were sent as memorials of loved friends "not lost, but gone before," to whom the day had been a personal anniversary. The extremes of life were represented in those who joined the church that day; one of the ninety-eight was but ten years old, and another eighty. Henry Ward Beecher has been for twenty-three years pastor of Plymouth Church, which now numbers over two thousand members. Between five and six thousand have been at different times connected with the church, many of whom, scattered throughout the country, remember with interest occasions similar to the one to which we have alluded. Not long ago it was stated in a certain newspaper that Mr. Beecher's congregation was largely composed of strangers, who were drawn thither by curiosity. Doubtless a large proportion of the hundreds who found it impossible to find entrance to the church on the first of May were strangers, and hundreds of strangers go there every Sunday. But the great mass are regular attendants. The large lecture-room, at the weekly Friday evening meetings, is often filled to overflowing, even as the church is on the Sabbath.

The registry of the Bethel Mission Sabbath-school, which is sustained by Plymouth Church shows a membership of nearly one thousand teachers and scholars; and there is a regular attendance of between seven and eight hundred. During the winter there has been a series of attractive entertainments at the Bethel one evening each week; and these, with the Free Reading-room, and evening schools for boys, draw many from the dangers of idle evening hours in the streets of a great city.—*Harper's Weekly.*

ADVICE TO YOUNG MEN.

Let no young man embark in any business for which he has no taste, for as sure as he does, his life will prove a complete failure. Bacon never could have been a Watts, a Fulton or an Arkwright. Byron never could have made a Franklin. Each of these celebrities chose a sphere for which he was suited, and achieved fame in it.

The great error committed by many American parents is the notion that at least one son must be a lawyer, doctor, preacher, or merchant, and herein lies the prolific cause of there being so much mediocrity among those classes. It is easy these days to get the privilege of pleading, practicing, proclaiming or merchandizing, but failure is the rule, and success the exception. True, many plod all their lives and eke out a sort of support but many fail to achieve any substantial success.—You might as well try to civilize a baboon as to give great success to any man in any profession or business for which he has no taste.

Many a young man has been absolutely forced by parental pride into a profession in which he remains at the bottom step, when in some mechanical pursuit he might have achieved wealth and greatness.

Thousands of men have been pushed into mercantile pursuits only to make thousands of failures. And the same error may be found with reference to mechanical pursuits.

WORDS FOR CHILDREN.

He did what he could.

The other morning, as the Pacific express on the Pennsylvania Central Road was running at the usual speed, the engineer noticed a boy on the track, waving his handkerchief. The train was stopped, and the boy informed the engineer that a large rock had fallen on the track. The boy's name is Willie Kehen, ten years old, and has twice prevented accidents at or near Kittaning Point, by his thoughtfulness and bravery.

Lessons.

"Mother," said Henry, "I can't make Mary put her figures as I tell her."

"Be patient, my dear, and do not speak so sharply."

"But she won't let me tell her how to put the figures, and she does not know how to do it herself," said Henry, very pettishly.

"Well, my dear, if Mary won't learn a lesson in figures, suppose you try to teach her one *in patience*. This is harder to teach, and harder to learn, than any lesson in figures; and perhaps, when you have learned this, the other will be easier for both of you."

Henry hung his head, for he felt that it was a shame to any little boy to be fretted by such a little thing, or, indeed by any thing, and he began to think that perhaps he deserved to be blamed as much as Mary.

Children very often complain of their playmates, or brothers and sisters, when they are very much in fault themselves. A fretful, impatient child makes himself and all about him very unhappy.—Will you all try to learn a lesson of patience?

"A fretful temper will divide
The closest knot that can be tied
—*Youth's Companion.*

A Florida negro was two years ago so terrified at the cars that he had to be blindfolded to get him aboard. Now he is a Senator and director of the railroad.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

Miscellany.

FARO'S VICTIMS.

A item relating how a poor young man in the city of St. Louis, with only five dollars for a stake, won at the tiger game the goodly sum of twenty-six thousand and some odd dollars, is attracting considerable attention at present. In the midst of our gambling excitement, when our heads are filled with dreams of magnificent lottery prizes, such little paragraphs take particular well with us. The recital of these large winnings is especially pleasing, nor, indeed, are we often left disappointed when one of them happens. The press in joyous strains trumpets it abroad, and its melodious notes are soothing to this mighty nation of gamblers. How seldom, though, in comparison do we hear of the heavy losses which the victories of this game suffer. Outside of a very limited number of friends, the news of a bitter loss seldom goes. We hear over and over again that John Morrissey, or some other distinguished Congressman, won on such a night the sum of one hundred, or perhaps one hundred and fifty thousand dollars. No one ever hears, no one ever asks, in fact, no one seems to care from whom this money is won. As a set-off to the aforesaid narrative of the impecunious young man and the twenty-six thousand some odd hundred winning, we propose to recite one taken from real life, the authenticity of which will be vouched for by the many who will at once recognize the unfortunate subject of this sketch. It is but one of a million similar cases that never become known.

Six or seven years ago the individual of whom we write was the head manager of one of the largest shipping and banking firms on this coast. Toiling steadily for many years, always alive to the interests of his house, a capacity for business excelled by none, he could not fail to find favor in the eyes of his employers. Sharing equally in many of their large investments, he had amassed for himself the sum of perhaps one hundred or one hundred and fifty thousand dollars. Then it was that that fatal passion first seized upon him. Losing lightly in stocks he would attempt to make up his losses at the faro table in the evening. So he went on, until at last, whether stocks were up or down, it was always the same, night found him at the table betting with fearful recklessness. During two or three years that he was thus enabled to keep up his gait, he must have lost at faro at least two hundred and fifty thousand dollars, for stocks, trencherous as is their reputation, had been kind at least to him. His position in the meantime had slipped from him, and was left penniless, homeless, though not hopeless, for the same deceptive siren was luring him on. Then it was, desperate in mind, that he bought a ticket in the Havana lottery. Fortune this time opened her bounteous hand for him drawing for him fifty thousand dollars. A little fortune itself, and yet in a few short weeks not one cent of it remained in his possession. All of it had been lost at faro.

Fortune has not been pleased to smile upon him since then, and this man, capable of better things, sits day after day watching the drawing of the cards, never failing to bet when he can raise the price of one chip, as eagerly intent as though thousands were on his turn. For one lucky young man, winning his few thousands, this city alone can show her hundreds of ruined men, who have lost not thousands, but tens of thousands, perhaps hundreds of thousands.—*N. Y. Exchange.*

[Were the secrets of the gaming table laid open to the public view, how many broken hearts and wrecked homes would the picture present. We could recite cases of woe and suffering that has been made known to us, but fortunately we have no taste for the sin, not ever knowing a card, ignorant of its entire routine save the sorrow we have known to flow from it.—Ed. F.]

THE LADY MURDER KEY.

HOW A RUSSIAN HUSBAND DISPOSED OF AN INTRUDER.

One of the Paris journals announces the death, at Versailles, of a Russian lady who appeared in the drawing rooms in Paris in 1848 and 1849, and was nicknamed the "Dame a la Clef." She died aged forty-five, in the most complete solitude. It is said that her husband, who was much older than she, came to see her for a week or two every six months, and went away again, no one knew whither. All was mysterious about this Lady of the Key. Last month her husband did not return as usual, but a letter came announcing his death. The widow survived him a few days only, and it is supposed she allowed herself to die of hunger. Whether true or not, this was the story that was whispered about her when she appeared in Paris, young and beautiful, more than twenty years ago. It is said that her husband surprised her in a little country house which he possessed near Moscow, at the moment she was hastily shutting somebody up in a wardrobe. A servant had betrayed her. The Muscovite Othello turned the key twice in the wardrobe, took it out, and then told his wife to follow him. A travelling britzka stood a few paces from the villa. More dead than alive, the unhappy woman obeyed. When the husband had placed her in a carriage, and given an order in a low voice to the coachman, "Keep this key," he said to his wife: "I have forgotten something, and will return," and then went back to the house. He returned according to his promise, but as the carriage ascended the hill the poor woman saw the flames issuing from the windows of the country house and taking full possession of it. She fainted away, and on regaining her senses discovered that a gold chain was riveted round her neck, to which the little key of the wardrobe was attached. She wished to kill herself, but her husband threatened that if she committed suicide he would reveal her misconduct, and cover her father's family with dishonor. She was therefore compelled to live, and her strange necklace excited much curiosity in Paris. At last her tyrant ordered her to retire into a quiet retreat, on the previous stipulation that she would not attempt to destroy herself during his lifetime. His death released her from this condition; but she had remained for more than twenty years, having the remembrance of her guilt always before her eyes.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. His three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed.

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, May 28.

The Grain Market may be said to be firm, yet no speculative feeling. Europe an Market is not so firm It has receded, and will recede more. We do not believe, with the general good condition of the crops in Europe, that high rates can be maintained, and the only wise policy for our grain growers here to pursue, will be to "sell at harvest."

Our general remarks on crops will be found in another column, of Seasons, Crops, etc.

Good sound wheat is sought for, and wanted for milling purposes, but little wheat is going out of our State abroad; even with the advanced rate, as the future is uncertain. It seems very singular that when Wheat rises abroad shipping ceases—are these rumors false?

The attempted speculation in Barley, like that of Potatoes was a failure.

Oats firm and fair sales. Hay steady, at fair rate.—Corn comes in freely from the lower counties, showing it a good corn region.

TO CORRESPONDENTS.

THE TRUE NAME.

We frequently receive letters of enquiry, also of suggestions—often letters containing criticisms of writers in our Journal, from persons who are entire strangers to us, letters often personal in their expressions and criticisms. Such letters we cannot publish or reply to—such go into the waste bag. Writers should give us their full names and residence, so that we may know all is right—their names will not be used against their wish, yet we must know the writer, else we shall not publish them.

GOLDEN EAGLE HOTEL.

Corner Seventh and K streets,

SACRAMENTO.

THIS HOTEL IS OFFERED TO THE PUBLIC AS a "Home for Families" and for the Traveler.

The Proprietor has spared neither expense or care to make his Hotel one that shall always be acceptable and pleasant to all that may favor him with a call.

With ample accommodations by means of spacious Suites of Rooms for Families, and by recent enlarged accommodations, he is confident that visitors will always be satisfied and feel at Home.

Particular attention will always be paid to the comfortableness of the apartments, by well ventilated Rooms, clean Beds and Bedding, and strict attention to the wants of Boarders; while the TABLES will be provided with the very best the season affords.

The Hotel has been greatly enlarged during the year, to more than double its former size, with splendid suite of Rooms, and is entirely refurnished in the best style.

CARRIAGES, to and from the Hotel to the Railroad Cars and Steamers, at all times, Free of Charge to the Patrons of the Hotel. Hotel open all night

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

ORANGE SEED.

THOSE WHO WISH TO RAISE TREES FOR AN *ORANGE PLANTATION*, Can obtain SUPERIOR SEED at the FARMER OFFICE.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			6 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS,

ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

Farmers' Headquarters. WARREN & CO., 320 Clay Street, up-stairs.]

SPLENDID PREMIUMS 1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin the SEVENTEENTH YEAR of LABOR with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS.

The California Farmer and the Independent for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them the two Splendid and Popular Pictures worth $4, and both these Papers for $7 50

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by HENRY WARD BEECHER, $7 00

The CALIFORNIA FARMER and the Hearth and Home Monthly, Weekly and Bazar, $5 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid $4 00

The CALIFORNIA FARMER and the New York Weekly Tribune, $3 00

The CALIFORNIA FARMER and the American Agriculturist, $2 00

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $3 00

The CALIFORNIA FARMER and the Pharmaceutical Journal of New York now in its 50th Volume, $3 00

The CALIFORNIA FARMER and the American Stock Journal, $3 00

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most favorable terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (paid strictly in advance) and $1 extra when payments have been delayed, and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered by the Union of other Journals with ours.

WARREN & CO., Editors and Publishers
320 Clay St., San Francisco

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS institution will commence on THURSDAY August 18th 1870

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of ten months $

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Varsi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

24-3 REV. A. VARSI, S. J. President.

A Bargain!

Fine Homestead on the Mountains"

A very fine COTTAGE HOME, in Edenvale County containing Twenty Acres of Choice Land, pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wagon and Chicken House, etc.

A Vineyard of Five Acres, Six and Eight years old from which 1,500 Gallons of Wine have been made this Year.

A good Orchard of 500 Trees, Five to Seven years old, all Good Varieties of Fruit. The Eleven Acres of Garden Choice Land is best for Orchard, Vineyard, or Garden Crops.

There is any quantity of "Uncle Sam" land of the best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person wishing this place can be made a "little Paradise"

The House and Grounds will be sold a GREAT BARGAIN if applied for immediately, and will would for Less than Cost of the Buildings!

Apply to Editor of FARMER.

TRUE OPIUM SEED

JUST RECEIVED—a Small lot of the TRUE OPIUM POPPY SEED, of a Superior Quality.

For Sale at "FARMER" OFFICE.

Herb Seeds.

Complete Collection of all kinds of HERB SEEDS of Superior Qualities.

For Sale "FARMER" OFFICE.

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittance to us, as there are several firms of Warren & Co. in this city, unless the address is very plainly marked, sometimes serious.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO., California Farmer Office

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, JUNE 2, 1870. NUMBER 20.

SILK CULTURE.

Tarrytown, N. Y., May 30th, 1870.

Editor California Farmer:

Dear Sir—I have been in search of information concerning the raising of silk worms in California, and have read Mons. Prevost's "California Silk Grower's Manual" with care. I find so many incorrect and contradictory statements in the book that I am at a loss to know how much of it is true. The edition I have was published by H. H. Bancroft & Co., San Francisco, 1867, and was sent to me by the Commissioner of Agriculture, Washington.

I find on page 105 a list of prices of cocoons at Lyons, France, the average of which is $1 26 per pound. Ure's Dictionary gives the price of cocoons in France in 1851 at 1f., 52c., per pound, equal to $0.19. It is possible that Mons. Prevost is correct?

On page 77 I find the statement that he had raised silk for two successive years at a net result of $104 and $108 per acre; and on page 237 there is a calculation to show that the net return from an acre may be $2,800. I have made a calculation, however, of the product per acre according to the price of cocoons on page 105 and find the result to be over $9,000!

I am really desirous of obtaining correct information on this subject for the benefit of myself and some friends who are looking about for a business in which to engage; but after my investigation of Mons. Prevost's Manual I hesitate about applying to him, for my confidence in his figures is shaken.

I have therefore taken the liberty of addressing yourself, and shall be much obliged for any facts that you can send me.

Has the silk manufactory at San Jose been successful?

Have any others been started?

What is the price of cocoons per pound, and what of raw silk?

Can the raising of silk worms in California be considered an established success?

If you can send me answers to my questions, together with any additional information, you will confer a favor upon me.

Very respectfully,
Josh Rockwell.

[Reply.]

In reply to our correspondent from Tarrytown, N. Y., we would say our widely esteemed Serientarist "Prevost" is no more with us. He has finished his course and gone to his reward above. His memory will long be revered for his unselfishness and devotion to the cause he espoused. He was worn out with labor.

The silk factory at San Jose has not succeeded, nor the one commenced here either. The Neuman Brothers had not "good fortune" on their side.

No others have been started.

The price of Cocoons here is now 3

Reeled silk none prepared for sale here yet.

The raising of silk worms in California can be pronounced a perfect success, and the business will be carried on on a large scale. Several large nurseries are already established.

We can also say that to persons conversant with the business, or having a taste for it, no better place in the world than California.

There is no one article that can be made so valuable as Gypsum upon a farm, or in an orchard or vineyard. It is the best fertilizer known, and should be extensively known and used.

Home Correspondence.

WALKING AROUND.

LETTER NUMBER ONE.

Dear Colonel.

Having gone around in a Waggon, we propose now to avail ourselves of a more ancient mode of locomotion, by going around on foot. And as we do not intend very long journeys without rest—perhaps we can prevail on you to accompany us.

It is now more than eighteen years since we landed in San Francisco. Eighteen eventful years. Winter has followed Summer, and Summer Winter, in such rapid succession that we can scarce tell when the one left us or the other came upon us. What great issues have been decided, what great mysteries solved? What wonderful changes in so short a time! It does not seem possible that the great gulf that seperates the past from the present, could be so easily bridged over. Science and Art keep steadily on, and light springs from darkness, even though gigantic intellects of the past failed to discover its whereabouts.

Daniel Webster, the North star of our Nation and Henry Clay, his great Southern compeer, have both gone to that mysterious bourn, from whence none return. We shall never forget the inexpressable sorrow that settled on us as we read those portentous words floting from the mast head of the Steamer as she entered the Golden Gate "Webster is Dead." And not on us alone, every face seemed to speak the language of the heart. But no words were spoken—what could we say?—With what avidity the papers were read that told us this great man was no more. We read his dying words, "I still live," we pause; how wonderfull, how prophetic, and yet how true, "though he be dead, yet shall he live again," and living in spirit bequeath to posterity the great blessings of Wisdom, Patriotism, and Truth.

With what anxiety those ever welcome Steamers were looked for, and what crouds gathered on the wharf at their landing. Friends long seperated meet again—the fond embrace, the fervent kiss.—Friends, brothers, sisters, fathers, mothers, husbands, and wives meet again. And then the letters, what a scene at the Post Office—long lines often reaching blocks—all anxious to hear from the loved ones at home. Watch their countenances, joy here, sorrow there—so intent on reading their letters that they see no one, an earthquake could scarcely arouse them from their abstraction.

The new comer wanders around into this place and that, astonished at what he sees. Magnificent Saloons thrown open, gorgeously fitted up and brilliantly lighted tables loaded with gold and silver, while music charms the senses like the Sirens harp that loreth on to death. We will pass along, here is a great croud and a great noise, what does it mean, "Cheap John," we read nothing more, but we hear "sold again."—Across the street is a rival with drum and fife, and fiddle, and castanet, making all sorts of horrible discordant sounds delivered at intervals with, "sold again" and so on, for a whole block a very pandemonium in which the fallen angels seem to rival each other in vulgar and obscene slang—But we are tired and it is getting late, so let us go home and tomorrow we will visit another portion of this wonderful city. Down in this basement there appears to be some kind of a Theatrical entertainment, but we will not go in though it is all free.

Good morning "Colonel," how did you rest last night? you say good, well, we confess we had too many bedfellows and they were too lively by half. But they may improve upon acquaintence, we suppose you old forty niners are quite used to them. What armies of rats you have, we counted a million on our way home last night in less than a minute, or we counted a number and multiplied them by five hundred thousand, which made exactly a million and we saw more after that. One whole street was paved with nail kegs filled with rusty nails, another block was lined with barrels of cement that had been wet and ruined. Boxes of hams, sugar, codfish, eggs, starch and old cheese in short every conceivable article of commerce encombered the street from one side to the others abandoned and worthless. But suppose we take a turn along the wharves, what a busy scene, those great ships discharging their cargoes and taking ballast. The wharves lined with teams and drays, all intent on some single object, yet all working as a part of the whole, to make up the grand machine. Those ships, where are they? scarcely one of those famous Clippers deigns to visit us now. Others fill their places, or more properly fill other places for the births that they then occupied are now occupied by great Warehouses, and a number of squares away lie their successors still discharging, still taking ballast. But instead of rotten rock, golden grain and valuable productions are sent to the far off lands in return for the rich commodities of the civilized world. The young State that then asked for bread, now sends it abroad to bless the millions of other lands, and receive in return the luxuries of the enlightened universe.

There comes another Clipper under full sail—read her name on the flag at her mast head *Flying Cloud*, eighty-nine days from New York. Just think of it. Down goes her anchor, around she comes with the tide. What is that strange looking thing on the hill yonder, there goes another long black arm. "Oh that is the Telegraph on Telegraph Hill," that signifies that another ship is in sight. There, one arm falls, it must be a smaller craft—perhaps another Steamer—shall we climb the hill?

What a magnificent view! what a scene of busy life. Shade your eyes, or we will, while you adjust your glasses, what a beautifull panorama.—What large gothic house is that looking so fresh and interesting just on the verge of the hill? The terrace is all overlaid with marble tiles—how comfortable and substantial it looks in contrast with the other temporary shanties that we see.

That is the residence of Harry Meiggs, the great capitalist, and that long Wharf making off into the Bay on the North, is another enterprise of his. Those vessels discharging lumber belong to him also.

We wonder if he will oblige us by taking our money and give us four per cent a month for it, he can get five or six per cent, but we don't care, we like to have ours safely invested, and if such a man will take the risk, he ought to make something handsome. Besides this he will give us the best block in the City for security, the same he has given to a score of others for thousands of dollars, the mortgages for which are still held as good as on the day "Harry" gave them, though they have been sold and re-sold, burned down, destroyed, rebuilt and destroyed again. Still the mortgages are *good*, and there is Harrys' name and there is Meiggs, Wharf, but where is Harry?

Go ask that man of deeds and conveyances, or yon bronzed sailor, or that muddy teamster, or that bent and aged woman, with soiled and scanty apparel. No, do not ask them, you know already, and they do not need to be reminded of one who did so much, and left such Monuments behind him.

Philomon.

(*To be continued.*)

SANTA BARBARA COUNTY.

San Francisco, Cal., May, 20, 1870.

Editor California Farmer:

Having called at your office, and not finding you, I leave a short note with a bottle containing a very small snake which I found in the ground on my farm in Carpenteria, Santa Barbara county. It is a curiosity to me, and I presume will be to you. It crawls through the ground like the Angle worm, and must of course get its food there.

A word about the crop-prospect of Santa Barbara. Most of the planting is done. Barley is good, corn and beans promise well as the land is in good condition.

The rain fall has been short, but that little has come just when it was needed most. The 16th inst. we had a good rain with thunder and lightning. The rain knocked down the barley on the low ground, but will be just what was wanted for the corn crop. Some will re-plow and plant over their beans so as to save weeding. If the land is in good order beans will mature and make a good crop without rain after planting.

We would mention also that cabbage lice is with us by the million, and they infest *everything*, corn, potatoes, beets, &c.

Respectfully yours,
O. N. Cadwell.

[This curious snake belongs to the "Glass Snake" species, of which we shall give a full account soon.—Ed. F.]

GRAIN, VERSUS, WEEDS.

Antioch, Contra Costa County, Cal.

Col. Warren:

Dear Sir—I see in your paper you are willing to answer all questions of this kind. Now will you, please, tell us what this is? In buying some grain last fall we got a sack of seed we suppose by mistake. Not knowing what it was I planted some, and here it is, and I still don't know but what it is only weeds. Why would any one gather it and ship it to market? We got it from a commission house in San Francisco. If not too much trouble, please answer,

Mrs. Margaret Perry.

We need only say the samples sent us was—weeds—as the writer supposes—common *white weed*.—Ed. Farmer.

The World's Inhabitants.

According to a recent estimate the population of the globe is about 1,228,000,000 souls. Of this number 552,000,000 belong to the Mongolian race; 340,000,000, to the Caucassian; 190,000,000 to the Ethiopian; 176,000,000 to the Malay, and 1,000,000 to the Indo-American race. The annual mortality is 33,000,000.

According to this estimate of the people on the globe, the debt of the United States would allow every person on the globe about *Two Dollars each*.

ABOUT BEES.

The following items we take from the *Agriculturist* of St. Louis, Mo:

A paragraph credited to the *Canada Farmer*, is going the rounds in the papers, stating that the well known writer on Bee Culture, Mr. J. H. Thomas of Brooklyn, Ontario, says "that he doubts whether any queens have ever been fertilized in confinement, as it is so contrary to their nature and habits that he should feel half inclined to doubt his own eyes if he saw it."

I do not know whether Mr. Thomas made any such statement as above quoted, but I do know that queens can be fertilized in confinement, without any doubt's, if's or but's about it. Last year I succeeded in having over twenty queens fertilized by such drones as I selected (three of which were mated before my own eyes) in adopting the method originated by the queen of the queens, Mrs. E. L. Tupper—and which is known as the Tupper process.

L. C. Waite.

St. Louis, April 30th, 1870.

HIVING A SWARM OF BEES:

Henry Ross was in our office a few days ago, and while there was talking of some of his exploits in the way of bee hunting. At one time, while out hunting, in the spring of the year when bees were swarming, he came across a large swarm hanging to a bush. He did not like the idea of leaving so fine a swarm. He was about three miles from home. How was he to get them home, was a question in his mind. The idea struck him of putting them in his shirt, and he took it off, tied up the sleeves and the collar, and shook the bees from the bush, and started home with them. In walking home he had to hold the bees in the shirt, at a distance from his body to prevent their stinging him. He succeeded in getting the bees home, and hived them in an empty whisky barrel, where they provided him with lots of honey.

SUCCESSFUL BEE KEEPING.

The Burmingham (Iowa) *Enterprise* says: "Mr. John Locke, of Cedar Township, Jefferson County, 6½ miles Northeast of our town, furnishes us with the following bee item: Last Spring he had thirteen stands in the common Langstroth hive, and one in a double (two-story) Langstroth hive.—The bees are Italian and hybrid. From these fourteen stands he got thirteen swarms, and 1,050 pounds of surplus honey. From the two-story hive which did not swarm, he got a trifle over 200 pounds. During the last week in August and the first week in September, the two-story hive collected over five pounds per day in the upper story alone."

STRAWBERRY ROSE TREES.

This is the freak of the Parisian Florist, and has proved quite successful—producing a pretty novelty. Roses blossoming and strawberries fruiting on the same stem, gratifies both sight and taste.—In the autumn, a few common roses of good kinds on their roots are planted in pots, at the same time a well-rooted strawberry vine, in good bearing condition is placed with each rose and planted just beneath the stem of the rose.

It is well known that the runners of the strawberry soon make their own roots, and in due time the runners are cut off, making these cuts as for a scion, and then grafted into the rose stem without cutting the runner from the parent plant in the ground. They should be cultivated with great care to induce the sap upward to the scions, cutting off all blossoms and many leaves from the parent plant. Thus treated, the strawberries will blossom and bear perfect fruit upon the rose tree for some time, and present a most attractive appearance.

The above we find in the *Utah Pomologist*, but have no faith in such an experiment, as it is against nature. A much prettier way would be to allow the runners to make strong plants and lead them up the rose tree to some pretty small shell hidden among the foliage of the rose. The shell being filled with rich compost, the runners may be led into this shell where they will root, and there may bear fruit. That will depend upon the care and nourishment given to them—the other experiment might be tried also.

INTERESTING EXPERIMENT.

A recent work of science gives the following novel experiment, which settles a question of some importance in philosophy:—Two hundred pounds weight of earth was dried in an oven, and afterwards put into an earthern vessel. The earth was then moistened with rain water, and a willow tree, weighing five pounds, was placed therein. During five years the earth was watered with rain or pure water; the willow grew and flourished, and to prevent mixing with fresh earth and dust from some source, it was covered with a metal plate, numerously perforated to admit air only. After growing in the air for five years, the tree was removed, and found to weigh 169 pounds plus, and the earth in the vessel being removed, dried, and weighed, and found to have lost only about two ounces of its original weight. Thus 164 pounds of woody fibre, bark and roots, were certainly produced; but from what source unless from air.—*Ohio Farmer*.

SUGAR AS FOOD FOR PIGS.

Messrs. Laws & Gilbert have made some experiments on pigs to ascertain the nutrative value of sugar as compared with starch.

Twelve pigs weighing from 72 lbs. to 98 lbs. each were placed in four pens, 3 pigs in a pen.—Lentils and bran were selected as the nitrogenous food, and in pens 1, 2 and 3 the pigs were allow 3 lbs. of lentil meal, and 1 lb. of bran each per day, and in addition, the pigs in pen one were allowed all the sugar they would eat, and those in pen 2, all the starch they would eat, and in pen 3 a mixture of equal parts starch and sugar. The pigs in pen 4 were furnished, in separate troughs, all the lentil meal, bran, starch and sugar they would eat. The experiment was continued 10 weeks. In pen 1, the pigs ate nearly 2 lbs. of sugar each per day, and in pen 2, a nearly identical quantity of starch; the other food being the same in kind and quality in both pens. The increase obtained from 100 lbs. of food was in pen 1; 30.8 lbs., and in pen 2, 19 9 lbs.

The pigs in pen 3, having a mixture of equal parts starch and sugar, and the same quantity of lentil meal and bran as in pens 1 and 2, ate 2¾ lbs. each per day of the starch and sugar. The increase from 100 lbs. of total food was 19.8 lbs.

In pen 4, where the pigs were allowed all they chose to eat of the different foods, each pig ate per day on the average, lentil meal 4 lbs. 6 oz., bran 3¾ oz., starch 3¾ oz., and sugar 2 lbs. 2 oz.—They ate more food and gained more rapidly than in any other pen. The increase from 100 lbs. of food was 21 3 lbs.

Without going into farther details, it is evident that the pigs show a great preference for sugar as compared with starch, but it does not appear that sugar produces any materially greater increase than starch; Certainly there is no benefit approximating in the slightest degree to the increased cost of sugar; and it is very doubtful whether we should gain any marked advantage by converting our barley into malt or growing sugar beets instead of ordinary beets or mangel wurzel.

We should add that a mixture of 20 lbs. of coal and wood ashes, 2½ lbs. of superphosphate of lime and 2½ lbs. of common salt was placed in troughs in the pens. This quantity being distributed to the 12 pigs during each period of two weeks.

Messrs. Laws & Gilbert says: This mineral mixture was always taken with the greatest avidity and relish; so much so, that the animals would leave their other troughs the moment the fresh supply of this was put within their reach. They were, moreover, upon the whole, very healthy throughout the experiment, and yielded good rates of increase.

In Messrs. Lawes' & Gilbert's account of these experiments, the actual gain of each pig is not given. But since writing the above, we have found the weights of the pigs at the commencement and at the end of the experiment, from which it appears that

the pigs in pen 1	gained	8 2 lbs.	each per week.
" 2	"	8 2 lbs.	"
" 3	"	9.1 lbs.	"
" 4	"	10.4 lbs.	"

To a practical farmer these actual figures are more interesting than mere percentage results.—From this it would appear that, there may be cases where, with an unlimited supply of other food, a little sugar may be given to a pig with advantage. A pig with a delicate appetite might be be given ordinary food, and then when he had eaten all he would of it, by mixing a little sugar with the food, he might be induced to eat more.

MINING UNDER THE SEA.

There is a vast copper mine in England, where shafts extend many hundred yards under the sea. The moaning of the waves as they dash against the rocks is forever sounding in those gloomy aisles. When the storms come, the sound of the waters become so terrific that even the boldest miners cannot stay below but leave their work and come out upon the earth. Overhead are masses of bright copper streaming through the gallery in all directions, traversed by a net-work of thin red veins of iron, and over all the salt water drips down from tiny crevices in the rocks. Immense wealth of metal is contained in these roofs, but no miner dare give it another stroke with the pick-axe. Already there has been one day's work too much upon it, as a huge wedge of wood driven in the rock bears witness. The wedge is all that keeps back the sea from bursting in upon them. Yet there are three tiers of galleries where men work day by day, not knowing but at some fatal hour the flood may be upon them, rendering all escape as hopeless as it was in the days of Noah. The eye-stricken visitor hurries away from the scene with a heart appalled in view of the hourly danger.

San Joaquin County.

The farmers from that district report to us that the late rain has done good service to the grain crop, and their fears have greatly abated. They think now they will have a good crop.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWENTY

BONES—PHOSPHATES—GUANO

I hate to check improvement or chill the glow of Faith; yet I do so keenly apprehend that many of our people, especially among the Southern cotton growers, are squandering money on Commercial Fertilizers, that I am bound to utter my note of warning, even though it should pass wholly unheeded. Let me make my position as clear as I can.

I live in a section which has been cultivated for more than two centuries, while its proximity to a great city has tempted to crop it incessantly, exhaustively. Wheat while its original surface soil of six to twelve inches of vegetable mold (mainly composed of decayed forest-leaves) remained; then Corn and Oats; at length, Milk, Beef and Apples—have exhausted the hill sides and gentler slopes of Westchester County, except where they have been kept in heart by judicious culture and liberal fertilizing; and, even here, that subtle element Phosphorus, which enters minutely but necessarily into the composition of every animal and nearly every vegetable structure, has been gradually drawn away in Grain, in Milk, in Bones, and not restored to the soil by the application of ordinary manures. I am convinced that a field may be so manured as to grow three tuns of Hay per acre, yet so destitute of Phosphorus that a sound, healthy animal cannot be grown therefrom. For two centuries, the tillers of Westchester County knew nothing of Chemistry or Phosphorus, and allowed the unvalued bones of their animals to be exported to fatten British meadows without an effort to return them. Hence, it has become absolutely essential that we buy and apply Phosphates even though the price be high; for our land can no longer do without them. Wherever a steer or heifer can occasionally be caught gnawing or mumbling over an old bone, there Phosphates are indispensable, no matter at what cost. Better pay $100 per tun for a dressing of one hundred pounds of Bone per acre than try to do without.

But no lands recently brought into cultivation—no lands where the bones of the animals fed thereon have been allowed, for unnumbered years past, to mingle with the soil—can be equally hungry for Phosphates; and I doubt that any cotton field in the South will ever return an outlay of even $60 per tun for any Phosphatic fertilizer whatever. That any preparation of Bone, or whereof Bone is a principal element, will increase the succeeding crops, is undoubted; but that it will ever return its cost and a decent margin of profit, is yet to be demonstrated to my satisfaction.

No doubt, there are special cases in which the application even of Peruvian Guano at $90 per tun is advisable. A compost of Muck, Lime, &c., equally efficient, might be far cheaper; but months would be required to prepare and perfect it, and meantime the farmer would lose his crop, or fail to make one. If a tun of Guano, or of some expensive Phosphate, will give him six or eight acres of Clover where he would otherwise have little or none, and he needs that Clover to feed the team wherewith he is breaking up and fitting his farm to grow a good crop next year, he may wisely make the purchase and application, even though he may be able to compost for next year's use twice the value of fertilizers for the precise cost of this. But I am so thorough in my devotion to "home industry," that I hold him an unskillful farmer who cannot, nine times in ten, make, mainly from materials to be found on or near his farm, a pile of compost for $100 that will add more to the enduring fertility of his farm than anything he can bring from a distance at a cost of $150.

Understand that this is a general rule, and subject, like all general rules, to exceptions. Gypsum, I think every farmer should buy; Lime also, if his soil needs it; Phosphates in some shape, if past ignorance or folly has allowed that soil to be despoiled of them: Wood-Ashes, if any one can be found so brainless as to sell them; Marl of course, where it is found within ten miles; Guano very rarely, and mainly when something is needed to make a crop before coarser and colder fertilizers can be brought into a condition of fitness for use; but the general rule I insist on is this: A good farmer, will, in the course of twenty or thirty years, make at least $10 worth of fertilizers for every dollar's worth he buys from any dealer, unless it be the sweepings or other excretions of some not distant city.

I have used Guano frequently, and, though it has generally made its mark, I never yet felt sure that it returned me a profit over its cost. Phosphates have done better, especially where applied to Corn in the hill, either at the time of planting or later; yet my strong impression is that Flour of Bone, applied broadcast and freely, especially when Wheat or Oats are sown on a field that is to be laid down to Grass, pays better and more surely than anything else I order from the City, Gypsum, and possibly Oyster Shell Lime, excepted.

My experience can be no safe guide for others, since it is not proved that the anterior condition and needs of their soils are precisely like those of mine. I apprehend that Guano has not had a fair trial on my place—that carelessness in pulverizing or in application has caused it to "waste its sweetness on the desert air," or that a drouth following its application has prevented the due development of its virtues. And still my impression that Guano is the brandy of vegetation, supplying to plants stimulus rather than nutrition, is so clear and strong that it may not easily be effaced. It seems to me plainly absurd to send ten thousand miles for this stimulant, when this or any other great city annually poisons its own atmosphere and the adjacent waters with excretions which are of very similar character and value, and which Science and Capital might combine to utilize at less than half the cost of like elements in the form of Guano.

My object in this paper is to incite experiment and careful observation. No farmer should absolutely trust aught but his own senses. A Rhode Islander once assured me that he applied to four acres of thin, sixty grave!, one hundred pounds per acre of Nitrate of Soda, which cost him $4 per hundred, and obtained therefrom four additional tuns of good Hay, worth $15 per tun: Net profit (after allowing for the cost of making the Hay,) say $30. He might not be so fortunate on a second trial, and there may not be another four acres of earth's surface where Nitrate of Soda would do so well; but, should I ever have a fair opportunity I mean to see what a little of that Nitrate will do me. And I hope farmers may more and more be induced to conform in practice to the Apostolic precept, "Prove all things: Hold fast that which is good." No one's success or failure in a particular instance should be conclusive with others, because of the infinite diversity of antecedent and attendant circumstances; but if every thrifty farmer would give to each of the commercial fertilizers—Lime, Gypsum, Guano, Raw Bone, Phosphates, Ashes, Salt, Marl, etc.,—such a careful trial as he might, by observing closely and recording carefully the results, we should soon have a mass of facts and results, wherefrom deductions might be drawn of signal practical value to the present and to future generations.

ACTION OF PLASTER.

It is much better to sow the plaster on the young clover than to wait a year, for you insure the stand of clover, and the plaster acts the second year, and for many years after. I'll tell you of a report Mr. Randolph Harrison made to the first State Agricultural Society of Virginia in 1817 or 1818, when John Tyler of Caroline was the President of the Society. Mr. Harrison said, when he bought Dover, the first clover seed he sowed on a field, the clover to a line was so much greener and better, that he thought the land had been manured up to that line, but on enquire of some of his neighbors, they told him that a man from Pennsylvania had sowed some white stuff there several years before, which he called Plaster of Paris, but it had no effect, and his neighbors laughed at him, but as soon as clover was sown Mr. Harrison said it showed the effect; which proves how long plaster will last, if not taken up by trefoils, or some plants which delights in it. So I tell all my young friends, sow clover, drag it in, and sow plaster, if the land is plaster land, and you make your land rich, and to make your land plaster land if it is not, lime it as heavily as you can afford. Mr. Fielding Lewis of Wyanoke told a neighbor of his 40 years or more ago, to lime his land, and he said I have not the money to buy it. Then said Mr. Lewis borrow it, and it will soon return principal and interest. By and by, Mr. Lewis was the first man on James River who used lime, and to him and Ed. Roffin lower Virginia is more indebted than to all the writers on agriculture since Virgil's Georgics. But for Ed. Roffin's Essays on Calcareous Manures, turning the attention of the farmers of the lower or tide water country to improving their land with marl and lime, I believe all the lands off the rivers would have been abandoned, and Berbeck report of this country in 1816 would have been realized. He said in Europe, the river lands of tide water Virginia would have been cleared; but the ridge lands were not worth clearing and would have been left in forest. But since the use of marl, some of our forest lands are very fine lands, and from their being rolling, are less liable to wet, and more easily drained, and perhaps more valuable, generally accessible to marl, and most of them good plaster lands. Rolling lands are generally red and not wet. Plaster acts well on red land land, and will not act on wet lands. I believe the forest lands which Berbeck condemned where they are accessible to marl may be made rich with clover and plaster. Marl was not used when Berbeck visited this country, and he did not take that into consideration, or he would not have condemned all the forest lands in tide water. At Shirly, we have this year very satisfactory experiments with plaster. (Gypsum.) On one of our farms only, was the clover of last year, (1869) plastered, on that there was a good stand. On the other two no plaster was sown on the clover, nor had there been for ten or twelve years, and there is a very poor stand, so I tell my boys, sow clover, drag or glean in the seed, and then sow plaster and never fail and you will have a good stand.—*Southern Planter and Farmer.*

CHARCOAL FOR TURKEYS.

I have made an experiment in feeding charcoal to fattening turkeys, and the result surprised me. Four turkeys was confined in a pen and fed on meal, boiled potatoes and oats. Four others of the same brood were also at the same time confined in another pen and fed on the same articles, but with one pint of very finely pulverized charcoal mixed with their food—mixed meal and boiled potatoes. They had also a plentiful supply of broken charcoal in their pen. The eight were killed on the same day, and there was a difference of one and a half pounds each in favor of the fowls that had been supplied with the charcoal, they being much the fattest and the meat greatly superior in point of tenderness and flavor.—*Exchange.*

DEEP OR SHALLOW PLOWING.

A correspondent of the *Western Rural* gives his experience upon deep and shallow plowing, and his experiments is a fair sample of all such labor. When will our farmers learn how to farm in a dry climate?

Now for the test. I took 22 acres of gentle rolling land, equally well-drained by natural drains or ravines, all of which had been in cultivation from 30 to 35 years, and pretty well worn. I subsoiled 11 acres. This portion had never been seeded to grass of any kind to my knowledge—at least, not for many years. The other 11 acres I plowed the usual way; that is, what would, be termed shallow plowing. It was all planted about the same time, cultivated as near as could be alike, with cultivator. No hoeing was done on either piece. I think both pieces of land had previously about the same attention, as regards manure and tillage, except that the part I did not subsoil had the advantage of a good stiff sward of clover and timothy turned under the preceding Spring, after being seeded three years. The result was, that I took from the part plowed the ordinary way and not subsoiled, but ten bushels to the acre on the average; while from the part which was subsoiled, I took thirty-five bushels per acre as an average. I send you this report of my experiments, hoping that I may hear from other who may have experimented on the same principle, or something better. W. W.

PAUPERS OF ENGLAND.

There are a million paupers in England. If English wealth is overwhelming so is English poverty. Yet there are thousands and tens of thousands of acres of lands in England given up to herds of deer. New Forest, in Hampshire, contains 30,000 acres. It has belonged to the crown since the days of the Norman Kings. How many poor people could get a living out of this, at present, merely ornamental tract! But English poverty has supplied Asia and America with a good colonizing population. Even now a benevolent English lady is sending over scores of poor English girls for the Canadian connubial market.

If thy brother is in danger, haste thou to his assistance, and hesitate not to endanger thy own life for him.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 27-2-100 per cent. For life-sustaining properties to all stock and to sudden changes of weather or over-driving it is unequaled.

For MILCH COWS it is particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton) it is the cheapest feed in market. It is now selling in New York at $43 per ton, gold; at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

PACIFIC OIL & LEAD WORKS,
NOS 8 AND 5 FRONT STREET,

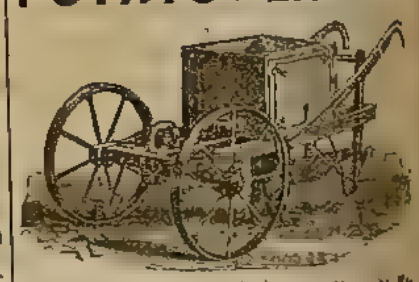
WARREN & CO.

TRUE'S IMPROVED POTATO PLANTER.



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.
It Saves the Labor of 12 Men in Planting Time.
Makes its own furrow, cuts the potato in such size slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over ground that can be plowed
No intelligent farmer can see that an implement with which one man can, with the aid of a boy plant six acres of potatos in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all SPRING and FALL in which to cultivate and dig.
This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very hot of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.
The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.
We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune with it.
Particulars and Catalogues can be had at our store
WARREN & CO.,

FIBER ZAGOS.

This, so called grape that for several years caused such a stir among viticulturists in California under the auspices of Mr. Bugby and others, has finally gone the way of thousands of other Humbugs. In the first place, there is no authority that any grape by that name exists anywhere only in the imagination of a few who have made that grape a speciality. The real name of the grape is "White Hamain," which we have imported from the east, and fruited, and find it identical, both in vine and fruit [illegible] known [illegible] of this vine when fully ripe, is very delicate and nice for table use, but will make neither good wine nor a sizeable raisin. The worst point it has is its disposition to crack and rot, a difficulty we have not been able to find a cure for. For the last five years we have known the grape and have not found it to justify the hopes entertained for it in one case in twenty.—We would therefore advise our readers to plant it sparingly for there are many varieties obtainable far superior, which have not this great fault.

[The above we clip from the Utah *Pomologist*, published at St. George—we do so, to correct an error which has been floating about for years.

The Grape called Fiber Zagos, when it was first shown at the State Agricultural Society, at Sacramento several years since, then introduced by Wilson Flint, we pronounced it a *misnomer*, and gave it the true name, "White Malaga" the same variety which comes to the Eastern States in Mother Jars.

We differ from the *Pomologist* as to its quality, for it is *one of the best Raisin Grapes known*, and is also a fine showy table Grape.

When grown in proper soils and rightly cultivated here in red land, or our decomposed quartz, it makes large clusters and fine Raisins, and ranks among our No. 1, Grapes.—Ed. F.]

VOLUSIA ORANGE.

BY H. G. LUNDEEN, M. D., VOLUSIA, FLA.

I believe I can present to horticulturists a new variety of the orange—a variety which possesses many good qualities. It originated near Volusia, Florida, and came from a choice seed. The tree bearing these oranges is quite young, never having yet borne its full crop. The orange seems to be an accidental cross between the wild or sour orange and the sweet or Chinese variety, having the large size, thick rind, and rough, oily skin of the sour, and the rich, highly-flavored, deep colored pulp of the sweet orange. In taste it is quite sweet, yet with sufficient acidity to make it pleasant. The rough skin is free from warts or other imperfections, the oil tubercules being even throughout, and much raised above the surface; in this respect being so different from the sweet and Mandarin orange. The fruit is slightly oblong, measuring, on an average, about three and three-quarters inches in height by three and a quarter to three and a half inches in diameter, and is much flattened at the ends. Color, lemon-yellow; weight, about twelve or thirteen ounces, often one pound. The smell of the orange is delightful, being much more spicy, and the flavor of the pulp much finer, than any other variety with which I am acquainted. It is hard to bruise, and this makes it valuable for shipping,—and it possesses the good quality of being long keeping. I have budded quite a number of young trees with this valuable variety. I believe it worthy of a place amongst the new varieties.—*Tilton's Journal of Horticulture.*

PINE APPLES IN FLORIDA.

The culture of the pine-apple is profitable in Florida. A local paper reports that one man in Key West sold his crop of pine-apples this year for nearly 7,000. The crop was gathered from less than an acre and a half of ground. The same man has 15,000 plants which will be in bearing next year. These cover less than seventy-five of ground, and if sold at the same rate as this year's crop, will net him $60,000. The pine-apple crop of next year, it is supposed, will exceed $200,000.

LOOK TO YOUR ORCHARD TREES.

Our orchardists are too neglectful of their orchard trees; many are not pruned at all, the whole strength allowed to go to making wood instead of fruit. Fruit growers should *summer-prune* their fruit trees as well as their grapevines—shorten all bearing branches—*thumb prune* all the young wood before the bearing spurs.

LOOK TO YOUR VINEYARDS.

Now is the time to watch the vineyards and be prepared to ward off the attack of the "Mildew," "Rust," or any evil to the vine; also to watch its growth, and *nip out* all the lateral branches above the fruit; the judicious pruning, enlarges the crop, and secures a better quality of fruit also.

VEGETABLE GROWING.

It is a great pity that so many of our farmers who have plenty of land yet never a vegetable grown on their own tables. Even their potatoes they purchase in the market, and as to green peas and beans, tomatoes or sweet corn, melons and cucumbers they are never seen on their tables save as a luxury, while for the want of them, and the cost of producing by labor, they suffer in health, strength, and expence in medicine and doctor's bills, ten times the amount.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevott on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, in gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will grow strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us.

WARREN & CO.,
Farmer Office.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed;

Fresh Cranberry Plant

(The Large Bell Variety.)

Ramie Seed, Fresh,

WATERMELON, CANTELOUPE,

AND

MUSKMELLON SEEDS,

EXTRA QUALITIES,

Flower Seeds, Choice,

MIXED LAWN GRASS, ETC.,

For sale at the "FARMER" OFFICE.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting.

We have them put up in Packages of 50 Nuts each, Mailed free to purchasers.

WARREN & Co., FARMER OFFICE,
32 Clay Street

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING JUNE, 2d., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

220 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with his paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER, CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to *our Journal*, to which we would direct their *special* attention.]

TO OUR READERS.

Horace Greeley's Essay this week, in the *Farmer*, is a capital talk about *feeding the soil*—our farmers should carefully read it—it will pay better than any speculation in Quartz Mining.

The action of Plaster, (Gypsum,) upon the land should be duly considered by all who till the soil.

Our lady readers will find several articles in the "Home Department," which we commend to their careful reading.

WALKING ROUND.

Our correspondent *Philmore*, will now give us some interesting Letters as he *walks round* our City, and recalls the past scenes of 49., to 52.—Our old Californians will read his Letters with pleasure.

OUR NEXT.

Report of Crops, and Prices—with a full reply to the *False News*, published in the large sheet from the *Alta* Office some little time since—severe indisposition for several days has prevented its appearance this week.

We return thanks for many letters about Crops—they will appear in our next issue.

SALE OF VALUABLE SHEEP.

We call the special attention of our Sheep men to the very valuable Flock of Sheep advertised in our columns this week. They are the very finest flock ever offered for sale on this Coast, and presents an opportunity to purchase rarely offered.

SPECIAL PREMIUM TO STOCK RAISERS.

WITH a desire to awaken a greater interest among our STOCK RAISERS, and to enlist them in STUDY of all the new things in STOCK RAISING, and to induce them to read and see what is being done in other States in STOCK RAISING,

WE PROPOSE

TO PRESENT to all who shall subscribe for our NEW VOLUME that commences in JULY, a copy of the STOCK JOURNAL, as a Premium,

FREE FOR ONE YEAR

to all who send us THEIR NAMES as subscribers to

THE CALIFORNIA FARMER.

WE will send the STOCK JOURNAL from June 1st., and also send them the FARMER for one year, for the Subscription of $5,00.

WARREN & CO., Farmer Office.

EXTRA NUMBERS.

We make it one of our plans in the dissemination of such agricultural information as we deem of particular importance and value, to issue and send out hundreds or thousands of EXTRA COPIES of our Journal, and send them broadcast, freighted as we hope with seeds of truth that may accomplish great good.

Of such editions we mail copies to active, prominent and influential men everywhere, and to Postmasters, ask them each and all to *read* and pass to others that the greatest good may be done.

The present number of the FARMER contains much that we trust will prove of value to the reader, and we hope many who read it will cooperate with us in our work, and extend the influence of our Journal.

Those persons who wish to give correct views of our State and its resources, a correct market report of all the products, should send the FARMER regularly to their friends.

THE SEASONS, CROPS, &c.

From every quarter of our State, where careful reports are made, we have only the word crops are good, crops are satisfactory.

We have information from many places which have been reported as having no crops; those reports are now known as made from *hearsay*—or mere *guess-work*, and the some Journals that made such reports now speak of crops as better than was anticipated—much improved by the late rains, &c., crops are coming up, crops are good, &c.

Our readers well remember that the whole season we have reiterated our faith in not only a good general average, but a larger crop than last year, and a better one, and where crops have failed it can already be traced to *faults in management*, plowing, planting, &c.

The Wheat crop will be of better quality this year, and larger than the last. New wheat will be with us next week.

Barley will be heavy and abundant. New crop being harvested now quite merrily.

Oats have done well and a good crop may be expected.

The Hay crop will be large and better cured this year. We notice, as we travel, more attention paid to *curing it green*, and thus retaining the goodness of the hay. Formerly too much of our hay was, bleached almost white, thus burning out the goodness of the hay.

Fruit comes to market more freely. Small fruits are getting plenty.

We notice cherries from the "Alhambra Gardens," Martinez, from Dr. J. Strentzel, are of most superb quality. They are sold by Howe & Hall, Davis street. Cherries are coming in in good quality and freely, and prices come down to moderate rates.

Currants look splendidly. The La Marseilles and Cherry Currants are large and beautiful.

Gooseberries, Raspberries, and Blackberries are now in full daily supply with moderate prices.

Los Angeles sends us fine Lemons and Oranges, equal and often superior, to any from other sources. A few years more and California need not import any more oranges or lemons.

Our vineyards and orchards are all looking well and promise well. More attention has been given to a careful pruning and guarding trees from insects and vines from mildew and insects by a judicious use of *Sulphur* and of *Gypsum*, both essential as protection to the orchard and vineyard.

DISTINGUISHED HORTICULTURISTS COMING.

We have information of a large Delegation of the most eminent Horticulturists and Agriculturists, who will visit California the present month.

We have a letter from Hon. M. P. Wilder, the President of the National Pomological Society, a Gentleman of world wide fame as a Horticulturist, the raiser of the famed CAMELLIA, *Wilderii* and *Mrs. Abby Wilder* and also the WILDER STRAWBERRY.

Mr. Wilder informs us that the party will leave between the 1st, and 15th of June, so that we may look for them at any time now.

Mr. Wilder will be accompanied by several most eminent men of Europe, and by many of the most prominent men of our own country. Among the party we have the names of Barry, Downing, Strong, Rand, Bridegman, and many others who come to see for themselves, and to witness the reality of what they have heard of our Orchards, Vineyards, and Gardens here in this

GARDEN OF THE WORLD

The coming of men who have done so much for the science of Horticulture, should be hailed with joy.

We hope the Presidents of our various Agricultural Societies will take some immediate action to give such men a glorious welcome, for among these most eminent men are several of ripe years and experience, who have given a lifetime to benefit their fellow men in this noble science.

We hope measures will be adopted to invite Hon. M. P. Wilder to deliver an address before our people while he is here, as no other living man can present so much that will be of lasting practical benefit as President Wilder.

There are also many other distinguished men from whom addresses would be of great practical benefit, and we trust this Golden opportunity will not be lost, but wisely improved.

THE CONCERT.

The very distinguished and highly gifted Queen of song, MISS. ADELAIDE PHILLIPS, gave her first concert at Platts Hall last evening, before one of the most select audiences of the season.

Miss. Phillips was in California some five years since, and the remembrance of her songs called out a full house.

We do not intend to give a detail of all the sweet songs sung by this gifted warbler, but only to say she enraptured them by her melody, and drew forth an earnest call for several encores.

Miss. Phillips may indeed be called the "Queen of Song." We are happy to say other Concerts will take place on the 6th and also on the 9th, these Concerts will, we are sure, be improved by our citizens, to hear this delightful Songstress.

Miss. Phillips was aided by J. Levy, the famed Cornet Player, the best in the world, and by Signor Mancusi, the whole under Mr. G. T. Evans, with a very efficient Orchestra.

These Concerts are a rich repast, and should be enjoyed—the Cornet performance of Mr. Levy is beyond all praise.

THE AGRICULTURAL COLLEGE.

Our Agricultural College Letters and Sketch was received too late for this week, shall continue the series in our next.

We are glad to notice that there is a movement to build. It appears to us that our College should now be in full working order. Other States have done so. Why not California?

OUR BOSTON VISITORS.

New England! New England!
Our own native Home.

The much anticipated, much looked for event, the arrival of the BOSTON PALACE CAR TRAIN, has triumphantly completed its GRAND MISSION, and is with us safely with its precious freight of glorious men, woman, and children, from the goodly city of Boston.

When this event shall be fully realized in all its true bearings, it will, as it should be, set boldly on the pages of History as one of the greatest achievements of this present Century. For when it shall be realized, that whole Families can step into a Railway Train, richly furnished in every department of living—equal to the best Hotels, and there to speed their way from their own city, through all the intermediate States and over the snow capped Sierra Nevadas, into our own sunny land, without a change of cars, and be set down at the very door of our Grand Hotel, coming a distance of over THREE THOUSAND MILES, through all the various climates of the year, and this too with all the luxurious ease and leisure of travelling in a private carriage, and this long and wonderful journey accomplished without an incident to mar its pleasure, and the entire distance completed in eight days! This event we say may truly be classed as one of the greatest events of the present century.

The Train started from Boston, May the 26th, and reached the Grand Hotel in this city at mid night, June 2d. And at that late hour thousands of our citizens awaited in the streets to give them a cordial and welcom Greeting.

The number of passengers in this company was about 150 persons, all hailing from Boston or its vicinity, and we learn from friends on this Train that a happier company never travelled in a Rail Road Train before. Having by contract, the right of way on the road, the cars could stop when and where they pleased, and thus enjoy the scenery at their leisure, and this was done to their hearts content. We hope the "Diaries" kept by these travellers will yet give the world *sketches of travellers on the Boston Train.*

As a Bostonian, we can say from the heart, Welcome, thrice welcome, citizens of that noble City. Welcome to our Land of Gold, our Land of Golden Grain, of Rich Fruits, and Bright Flowers.

We give you the Right hand of Fellowship, and bid you "Ask and ye shall receive," all the kind care, courtesey and good will, that hearts could desire.

San Francisco Merchants and Citizens greet you with a right good will.

We bid you welcome to our "Sunny Land"
We bid you welcome with an Earnest heart
We bid you welcome with our strong Right hand,
We bid you welcome from our "Native Land"
And claim of that Dear spot, to own a part.

MASSACHUSETTS' EDITORS.

We mean *Agricultural* Editors, men who have given long years of earnest labor to promote the cause of Agriculture.

Hon. C. L. Flint, the Secretary of the Massachusetts Board of Agriculture, and Geo. Noyes, Esq., Editor and Proprietor of the Massachusetts *Ploughman*, are on a flying visit to our State, to gether information of its vast resources.

Mr. Flint has made himself a name and fame as the author of several valuable books on agriculture, viz: Flint on Dairying, Flint's Reports of Massachusetts Agriculture, and many other very valuable books.

Mr. Noyes has nobly sustained the *Ploughman*, one of the best Agricultural papers in our country, having a wide circulation, a paper of good and powerful influence reflecting great credit upon the Editor and Proprietor. We not only felt honored by a call at our Sanctum of these gentleman, but were delighted to greet them and to welcome them to our "Sunny Land."

These visitors will "Make hay while the sun shines," and visit all the most prominent spots of our State as their stay will permit. The friends of agriculture everywhere should give them a happy greeting.

STATE AND DISTRICT FAIRS.

It is now June and those who are interested and have products to exhibit, are now making inquiries about the coming Fairs, and it is of importance that the managers of Fairs should have their premiums before the people, that they may lay their plans of action.

Manufacturers of Agricultural Implements are desirous of knowing what is to be done, and when and where the Fairs are to be held.

PLOWING AND MOWING MATCHES.

We have many inquiries from different quarters and owners of Machinery, who say they are desirous of having a TRIAL OF MACHINERY, and ask if the Managers of our Fairs cannot order a trial of these Implements now in the season of Harvest. This certainly is the duty of such Directors, it is done in other States, why not in California?

We hope to hear from the managers of our Fairs on this subject.

SUMMER GARDENS.

We are often surprised to see gardens in our city and in the country apparently burnt up by reason of neglect. Owners of garden spots think because it is the dry season that *water* alone will sustain and keep up a fresh appearance. *This is not so*; our city garden spots and all others can be kept continually fresh and blooming by *cultivation*, deep spading and fine raking; the keeping of the soil finely pulverised and deep is what is most needed; then the moisture will be drawn up from below by the heat of the sun. This is nature's process, and all plants and flowers will prosper under such care without any irrigation.

Another good plan is to *mulch* all trees and large plants with any article of the manure kind. This aids in making a prosperous garden.

HELP YOUR SELF.

We place little faith in the genius which expires without action. The poet may lament his fate in sorrowing numbers; the philosopher must pity both genius and poet. One might as well talk of a nightingale living a long life without singing, or a lark not greeting the morn. The music is in them, and will out, in spite of cage or bars, and can only be extinguished with life. Boy at the plow, imagining yourself a dwarfed Shakspeare, think of Burns singing a song while tugging the furrow, just as you are, which vibrated human hearts round the world. The secret of his success was that he was Burns. There are none like him, and none need expect to be, not even desire to be.

The world hates duplicates; the last it always considers a caricature. Burns' age wanted a Burns, and he came. Our age desires different developments, and if you are the one called, be assured you will not die unwanted. This view of man's mission is liable to abuse. Believing that we are wholly creatures of circumstance, we idly remain awaiting the issue, waiting for a summons to take some great position. When thus benighted, we should consider that we are ourselves the greatest circumstance of our existance, and our own activity and energy must earn the place we desire. The French Revolution might have passed and never called the name of Napoleon, had he not educated in its spirit, seized with masterly grasp the control of its discordant elements.

Cincinnatus may be called from the plow to the dictatorship of an empire; but never, had he not by a long service, already shown his masterly genius for command. Such great turns of fortune never overtake the unprepared and waiting drones. They may waite to the day of doom, and wait till "God helps those who help themselves," and fortune is the helper of the energetic.

The individual may bide his time, gathering strength and preparing, only biding that he may be prepared in season to grasp the first opportunity he is "lord of;" then he makes, a mark wide and deep in the hearts of mankind, as the path of an avalanche. See how it is with that. Through the long winter days it rests on the mountain's brow; day by day the snow falls, adding flake to flake; and the sleet and rain congeal to its surface, still it reposes, grasping the rocky brow with tighter hand, and amid tempests and clouds remaining. Spring comes, and the breath of summer warms the mountain. Then it is ready for the dreadful leap, for which all winter has been preparing, and with a thundering crash, reaching from chasm to chasm, and rolling in dying accents from crag to crag, it rushes to the plain. Generations of men unnumbered will behold its deep furrow, almost cleaving the mountain in twain.—Had it not waited until prepared, had it fallen piece by piece, had it otherwise than thrown all the accumulated force of a year into the effort, the first grasses of spring would have obliterated its path. So it is with the efforts of men. They can waste their energies in fruitless efforts; they can waste in idle waiting; they can, by husbanding their strength till the proper time, shatter the world, and obtain the homage of generations they have benefited.

The old adage "Seize time by the forelock," should read, Seize circumstances by the forelock. Make the most of your surroundings, using them for stepping-stones to something higher. Never impatient, never content, active ever.

IMPORTANT QUERIES FOR FARMERS.

What is Silica?—Silica is a mineral substance, commonly known as flint; and it is one of the wonders of the vegetable tribes, that, although flint is so indestructible that the strongest chemical acid is required for its solution, plants possess the power of *dissolving and secreting it.* Even so delicate a structure as the wheat straw dissolves silica, and every stalk of wheat is covered with a perfect, but inconceivable thin coating of this substance.

Why is silica diffused over the stems of wheat, grasses &c.?—Because it affords strength, density, and durability, of structures that are very light, and which, but for this beautiful provision would be exceedingly perishable.

Why is guano a productive manure?—Because it contains, with other suitable elements, an abundance of the *silicious skeletons of animalculæ.*

Why does a wheat crop greatly exhaust the soil?—Because, it absorbs the *carbon and the salts* which form the straw and the grain.

Why is straw frequently used as a manure?—Because it gives back, with other substances, *a considerable proportion of silica*, in that form which adapts it to the use of the succeeding crop.

We also ask our Vineyardists *why is it that the pruning of our graperies will so enrich the soil of the vineyard?*

Because they restore back to the soil in the decomposing branches the substances which had supported the vine.

ANTIOCH FISHERIES.

Our Antioch neighbors have gone into the fishing business lately as our neighbors of the *Ledger* says:

We learn that a Mr. Page of Antioch, killed an Eel measuring *seven feet long*, and the size of a man's leg. The *critter* was seen to swim with his head raised some foot and a half out of water when Mr. Page shot at and secured the monster. We *guess* this animal is a lineal descendant of the Nahant Sea Serpent that usually appears in May, and this is a forerunner of the Boston Delegation of the Board of Trade—It may be a *true* story, or the *Ledger* when measuring the animal may have eel on-gated it

The same *Ledger* tell of a man that went fishing, and when waiting for a bite tied his line around his leg, took out the *Alta* to read it, and a *Sturgeon* was so anxious to get at the *news* that he took hook, line, and all, and drew the man into the river, the neighbors only arriving in time to seize the pole and save the man. The weight of the fish is not reported—large enough, however, to supply Antioch.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

BOOKS RECEIVED.

We have "Harris on the Pig," a very excellent book on the swinish subject, recently published by Orange Judd & Co., New York. This is a very practical book, valuable to our Hog-raisers.

FLORAL.

We have a beautiful little book, bearing the name "*Seventy Five Flowers*," just from the press of J. E. Tilton & Co., Boston; handsomely illustrates the seventy-five flowers thus described in the book.

The able author, E. S. Rand, Esq of Boston, is fully qualified, and has sent forth a very acceptable book, worthy a place in every library.

FIVE THOUSAND A YEAR.

This is a story of that sum of money, and how the writer made it starting *without a capital.* Ezra is a book for the many thousand young men here, who are wasting the morning of life doing nothing. Let them awake to duty, read this book, go to work and become useful men. Ed. Hildreth, Esq., is the author of the book; Loring, Boston Publisher.

A SIMPLE FLOWER GARDEN.

A Book for Country Homes, being a practical guide for every lady how to secure a pretty garden. How to start it; what it will cost. How to stock it so as to have flowers all the year round. Charles Barnard, Esq., is the author, a gentleman who has written many books upon Agriculture, Horticulture, &c., and this is a book we can recommend as a useful book.

Messrs. A. Roman & Co. have all these books on sale.

THE HUB.—We have a very fine Paper, No. 1, Vol. 1, of a new Journal, published at Boston by the Carriage and Car Makers—a capital name from a capital *place* for a capital *paper*—it is a creditable Journal.

MARITIME REGISTER.

We have received No. 1, of Vol. 1, of the San *Francisco Maratime Register*, published by D. I. Bishop, of 520 Clay street. This Journal is designed to furnish all the Marine intelligence both foreign and domestic, connected with the shipping interests. This is a journal that must prove valuable to our commercial men.

It will also be a register of all our rivers and bays, furnishing valuable information to all. The *Register* is neatly printed and sent forth in good style.

We have copies of the Walla Walla *Farmer*, a new Journal, published in Washington Territory, under the auspices of the Agricultural Society there, A. H. Simmon, Editor and Proprietor. It is a neat and well printed Journal and appears well; we wish it success.

EARLY ROSE POTATOES.

We are indebted to H. A. Deming, Esq., of the famous "Howe Sewing Machine" for *Two Early Rose Potatoes*, which he brought from Rutland Vermont. They weight 1½ lbs. and ¾ lb. They are splendid samples, and for the kind courtesy to us, we will as requested plant them by our own hand and note the result, many thanks for the favor.

SUGAR FOR FRUIT.

Now that the Season is with us when a large amount of sugar will be used on Strawberries, Currants, Raspberries and Blackberries, we can suggest to all, the use of the best Brown Sugars far better and containing more saccharine juice than the white or refined sugar.

The process of refining and perfecting the white sugar takes away much of its best quality for sweetning Fruits, and the fine light Brown Sugar, the Bowen & Brothers Fruit Sugar, is vastly superior to the white.

We give this information from those who only use this kind of sugar from preference of its quality, and our own experience corroborates it—we hope others will try it.

RUSSIA INTERESTS.

We have had the pleasure of several visits to our Rooms of Ed. Zimmerman, Esq., a corresponding member of the Royal Agricultural Societies of St. Petersburg, and Moscow Russia, who visits California, to examine the resources of our State and Coast.

Mr. Z., has visited many of our best Farms, Vineyards, and Orchards, has visited the Big Trees, Yosemite, Calistoga, the Geysers, and will shortly leave to make the circuit of the other States and make his Report through the Journals of Science, of Russia. We have been much pleased with the Gentlemany courtesy of Mr. Z., and the studious interest exhibited by him and we feel assured he will most faithfully represent our State and its resources, and fully at the Metropolis of the, Czar of all the Russias.

Mr. Zimmerman leaves this week for New York by Steamer, having come by the way of the Rail Road, so that he can report to his own Government all routes, with their interests. Mr. Z. has given close application to the work, and will make extended sketches.

We wish him a pleasant continuance of travel and a safe journey home.

A WIFE BROKEN.

A broker once saw so many chances for making money that he was inclined to speculate, but after listening to a friend one day, he promised to work within the legitimate channels of his business. He kept, however, a fictitious account of the profits he would likely have invested in, had he not given his pledge, and at the end of three months he struck a balance, and great was his surprise to find that he had lost four times the sum necessary to bankrupt him.

THE FEEDING OF PIGS.

One of your old subscribers at Hampden Corner, Mr. W. Arey, has long been a diligent questioner of nature in regard to the best methods of conducting farming operations and in feeding and taking care of stock. He says he can by his method of feeding, raise hogs on corn meal when meal is $1.50 per bushel at a cost of 9 cents per pound.—He says that his experience has taught him that unless you wish to raise shadowy hogs and sloshy pork do not incorporate into their food more liquid than nature demands. That too much swill distends the stomach and weakens the organs of digestion and assimilation. He is now feeding six hogs weighing 300 pounds each. His allowance to each hog per meal, feeding twice per day is one quart of raw meal mixed with three pints water.—He sees water before his hogs but they do not drink it. He commences feeding his pigs in the same manner and they soon learn not to cry for swill. Some not quite as enthusiastic as himself accuse him of having "hog on the brain." He does not care for the insinuation but says it pays. His motto is to take a live interest in your business and to seek in all things the better way. At Mr. Arey's figures at the present prices of corn and round hog in the market, there is quite a margin for profit, aside from the value of the manure which every farmer knows is not a mean item.—[V. D.—*Maine Farmer.*

BRAHMA FOWLS.

I consider the Brahma superior to any other breed of fowls for four reasons—first, because they are great layers, and seem inclined to lay in midwinter, when eggs are most desirable and command a high price in the market; second, they are good mothers and good sitters; third, they are always in a fit condition for the market, and fourth, they are very hardy and will endure a great degree of cold. I have now a pair of pure Brahma fowls which weigh twenty-nine pounds. I have also a few of the Brahmas mixed with the common breed of fowls. One of these has laid two litters of eggs since January 1st, and is now laying a third. Another has hatched eight chickens from nine eggs the present season, and is now laying again. These fowls have proved satisfactory to me, and I think they will to all others who try to raise them.—[A Little Boy, *in Country Gentleman.*

Splendid Bramah Fowls can be had at Nichols and Willards, Fruit Vale. See Advertisement.—Ed. F.

VENTILATION.

Farmers should see to it that their stables have proper vents for fresh air for their stock, as it tends, as much as anything, to the promotion of good health and healthy appetites, and as every adult human being inhales about sixty gallons of air per hour, the necessity of attending to proper modes of ventilation in close apartments is very desirable. But how often we find upon entering a cow stable of a large dairy, the air stifling, and we are glad to retreat as soon as possible. No wonder that for want of pure air and proper cleanliness, so many dairies are divested of choice animals. A word to the wise is sufficient.

UNINFLAMMABLE DRESSES.

It is much to be regretted that the process of rendering the material of ladies' muslin dresses uninflammatory is not more generally understood and used. Either of three substances—phosphate of ammonia, tungstate of soda, and sulphate of ammonia—can be mixed in the starch and at the cost of two cents a dress, deaths from burned garments can be rendered impossible. Articles of apparel subjected to those agents can, if they burn at all, only smoulder; and in no case can they blaze up in a sudden and terrible manner in which so many fatal accidents have occurred to fair wearers of crinoline.

RELIC OF THE GREAT BATTLE.

A curious relic of the sanguinary battle of Gettysburg has been presented to the Historical Society of Pennsylvania. It consists of a grape shot from Slentz's woods, bullets from Culp's Hill, granite rock from Little Round Top, bayonet from United States soldier's grave, brass eagle made from fuses of bombshell, rebel torpedo bullets, knot from Big Round Top, and the whole mounted on a nest stand made of apple wood from the National Cemetery.

ABOUT TOADS.

There is nothing beautiful about any toad, but God has made him of great use to man. Shakespeare says that there is a precious jewel in the toad's head. As we watched these homely creatures among the squash and cucumber vines, we find the jewel in the stomach, in the shape of a good appetite for bugs and worms. Toads are among our best friends and should have full freedom in the garden.

TO CORRESPONDENTS.

THE TRUE NAME.

We frequently receive letters of enquiry, also of suggestions—often letters containing criticisms of writers in our Journal, from persons who are entire strangers to us, letters often personal in their expressions and criticisms. Such letters we cannot publish or reply to—such go into the waste bag. Writers should give us their full names and residence, so that we may know all is right—their names will not be used against their wish, yet we must know the writer, else we shall not publish them.

THE NEW OATS.

The famed NORWAY and EXCELSIOR OATS that have excited so much interest in all the old States, have thus far proved more than was represented of them.

We have just received a small invoice of these wonderful Oats, with some other new kind of cereals, and although late for the general planting they can be planted on our city or alluvial soil, or in the mountain country and the seed thus secured, they will do on our Tule land also even now.

33.10 *For Sale at the* FARMER OFFICE.

PUBLIC SALE.

SHEEP! SHEEP! SHEEP!

AUCTION SALE

Of Thoroughbred and Fine Graded Spanish Merino Sheep, and other Personal Property.

CHARLES H. ROSS, Receiver of the Estate of Emmet Curtis, deceased, will, by order of the District Court of the Sixth Judicial District, of the State of California and county of Sacramento, offer for sale, at Public Auction, at the ranch of the late Emmet Curtis, deceased, in the county of Sacramento city, and about two miles from Elk Grove Station, on the Western Pacific Railroad.

On Tuesday, June 28, 1870,

At 10 o'clock A. M.

The following described valuable property belonging to the said Estate, to wit:

25 Thoroughbred Spanish Merino Rams.
60 Thoroughbred Spanish Merino Ewes.
40 Thoroughbred Spanish Merino Lambs.
100 Fine graded Yearling Rams
1200 Fine graded Ewes.
650 Fine graded Lambs.
115 Wethers.
2 American Cows.
2 American Steers.
1 Farm Wagon.
1 Cultivator.
1 Wire Horse Rake.
1 Buckeye Mower and Reaper
1 Plow
1 Large Iron Cauldron.

The above desirable property will be sold to the highest bidder, for United States gold coin. Ten per cent. to be paid on the day of sale, and the balance on delivery of the property

☞ The flock of Sheep above described is pronounced by competent judges to be the best in the State. For years they received the First Premium at the State Agricultural Fair. They will be sold in lots to suit purchasers.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the VALUE OF OUR AGRICULTURAL INTERESTS.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to EDITOR FARMER.

TYPE FOR SALE.

The Type which now prints the FARMER will be offered for sale, as we intend to print on NEW CALIFORNIA TYPE.

The quality of the Type can be seen by reading the FARMER. Any one wishing a good bargain can have one by calling at once at our office, or addressing EDITOR FARMER.

LITHOGRAPHING.

MAP-MAKING, Plans, Bonds, Certificates, Bill-Heads, &c. The best work at the lowest rates at

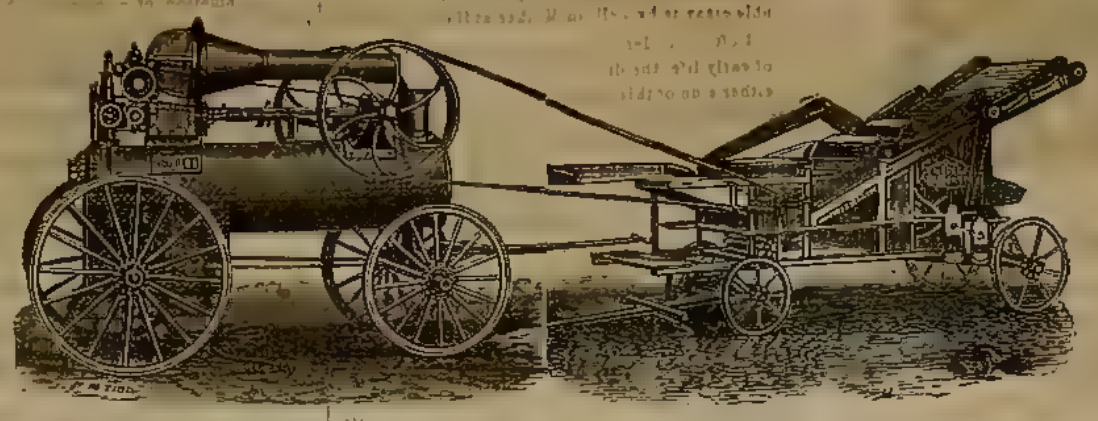
"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 46 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS

With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.
KIRBY MOWERS—two Sizes, Greatly Improved.
HEADER WAGONS—Thimble Skein, with and without fifth wheel, do., do., with Screw Hubs.—Mill Machinery, Engines, and Agricultural Implements, Hardware, Pipe and Nails.

33 8. TREADWELL & CO., San Francisco, Marysville, and Sacramento, Cal.

Farms and Ranches,

—AND—

LANDED ESTATES FOR SALE.

☞ Now that we have so many new settlers of the better class coming to our State, those who have

FARMS, IMPROVED HOMESTEADS,

LANDS, RANCHES, &C.,

Should now make them known extensively, and in no way can they do it more effectually than by

ADVERTISING IN THE FARMER,

As we are now sending to thousands of readers in the other States, as well as at Home, our JOURNAL, the advertisements appearing in our columns will be read in all the principal Merchant's Exchanges in the Eastern States and Europe, as well in the best private Reading Rooms and Libraries of the United States.

Advertisers will be wise that consult our columns.

☞ One thing is certain:—No disreputable Advertisements can appear in our Journal. 33-1

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF all Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Propts.

Young Man Wanted.

We want a smart and active young man from 13 to 15 years of age, to attend the Reading Room and Museum, Mailing Papers, etc.

None need apply who cannot bring the best testimonials of character and ability. Must be a good penman and quick at figures.

To such a young man an opportunity of advancement will be given.

A young man whose parents or friends reside in the city would be preferred.

Apply at our office only between 4 and 6 P. M.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER."

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.
COMBINED—MOWER AND REAPER—DROPPER—TWO SIZES.
COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

32-12, GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

LITTLE FINGERS.

Busy little fingers,
Everywhere they go,
Rosy little fingers,
The sweetest that I know.

Now into my work-box,
All the buttons finding,
Tangling up the knitting,
Every spool unwinding!

Now into the basket
Where the keys are hidden,
So mischievous looking,
Knowing it forbidden.

Then in mother's tresses,
Now her neck enfolding,
With such sweet caresses
Keeping off a scolding.

Darling little fingers,
Never, never still,
Make them, Heavenly Father,
Always do thy will.

WHY SHOULD WE WORRY?

Why should we worry? This life is not long enough
Here to be wasted in sighing and tears;
Silly and childish is he who's not strong enough
Wisely with reason to fright away fears.
Care's but a coward, with courage not half enough
Fairly to face if we show no fear;
Nay, if it pester you, you've but to laugh enough;
Presto, begone! lo, the bore is not here.

Memory too often will bring us old sorrows;
When they were here, did we wish them to-last?
Why not forget them? The fool alone borrows
Present regrets from the griefs of the past.
Can we now change it by weeping and whining?
What's done is done, and is done past recall;
He who the present forgets, in repining,
Useless and vain, is the worse fool of all.

Fancy, the jade, will too often be peering,
Curious and sacred, through the Future's dark night;
Why should we tremble at what she is fearing?
Why should her dreamings fill us with affright?
Wait till they're real things, and present before us;
If they are worth it, we'll care for them then;
Now they're but shadows, too flimsy too bore us;
Far too unreal to shake those who are men.

Time, with the Present's real griefs to be dealing,
That's not so easy, we sadly must own;
Who can deny flesh and blood will have feeling,
Care, grief, and anguish will make themselves known;
Own it, but add, life is too short for worry;
Darkness brings sunshine, or all men are wrong;
Off with despairing—don't be in a hurry
To know grief is pressing—it will not stay long.

FEMALE PHYSICIANS.

In the fourth century we find a notice of a female physican, Abella of Salerno, who wrote several Latin treatises on medicine. In the early part of the fifteenth century, Dorotea Bucca was professor of medicine at Bologna University, and Allessandra Giglanivas, at a still earlierdate, of famous repute as an anatomist in that school. Olivia di Nantes, a Spanish lady of the sixteenth century, was famed for her knowledge of scientific medicine. Her medical works were published in Madrid in 1588. Anna Manzolini occupied the chair of anatomy at Bologna in the middle of the eighteenth century, and was famed for her skill in wax-modeling. In 1788 Maria Petraccini took a medical degree at Florence, and lectured at Ferrara, assisted by her daughter, Zaffisi Feretti, who was also the recipient of a degree in medicine at Bologna.

Maria Delle Donne became M. D. at Bologna in 1806, and was appointed to the chair of midwifery by Bonaparte in 1812. She was a famous practitioner in medicine and surgery. Frau Von Siebold, early in the nineteenth century, took a medical degree in Germany; and Marianne, her daughter, in 1817, did the same. The latter was quite an authority in her special department of obstetrician and practitioner of diseases of women Madame La Chapelle, in Paris, was considered one of the greatest authorities in the same department in the latter end of the last century; and Madame Boivin was even more distinguished. In 1814 the latter was appointed directress of one one of the hospitals of Seine and Oise, and was granted the title of M. D. by the University of Marbourg.

Among English-speaking nations Miss Elizabeth Blackwell seems to have been one of the first ladies who took a degree in medicine. This she did in 1849.

Mrs. Garrett, on first commencing the study of medicine in 1860 found all doors but that of the Apothecaries' Hall closed against woman. She went through five years of apprenticeship, and obtained her diploma in 1865, having, however, been compelled to pay sometimes as much a fifty guineas to a qualified teacher for a course for which any male student would only have been charged five. And then the "Hall" repented of its generosity, and closed its doors against any other lady doctors.

A Russian lady, Madame Suslowa, took a degree in Zurich in 1867, and now about a dozen ladies are studying there. Even St. Petersburg University has recently given a degree in medicine to a lady. Some ladies are also studying at Vienna University, and one has recently taken a degree in Berlin.

A DARK CLOUD.

[The following earnest essay on Parental discipline should be read by every Mother. This valuable essay is by Zell, in Mother at Home.—Ed. P.]

I often wonder that among the thousand dangers of early life, the dreadful liabilities which lie on either side of this careless track, parents not more anxious as to the possible results of a passionate temper. They witness the sudden paroxysm of anger, the uplifted hand to strike, the missive, thrown at hazard, among precious eyes and limbs, and too often these youthful offenders receive only a gentle reprimand, or a threat that the next offence shall be followed by punishment.

It is frequently remarked, in reference to a daily recurring fault, that it is not well to notice every time it is committed. This is true in regard to very many of the trifling offences of childhood, for, of course, these little unreasoning and unreasonable creatures, must begin the experiment of life in a very reckless style, which their cunning and infantile graces were, perhaps, meant to cover and excuse; and for these, a shake of the head, or a warning finger suffices. One would not wish to subject the unconscious little stranger to the terrors of the law, when the gospel of love would be so much better understood.

But we all know how rapidly these pretty, little ways, so full of intelligence, begin to assume a distinctive character, and to settle into habits which call for the exercise of more effective measures. The dangers of this period are not limited to one fault; but it is of one only, that I, at this time, raise a warning voice—a passionate temper—which suddenly clouds the reason and comes crashing, like an avalanche, through all barriers of decorum, respect and affection, exploding in dreadful words, if not in fatal deeds.

It is often said of this fearful propensity, that it will be rectified when the child grows up; but why not help the child now, and thus forestall the necessity of much self-reproach and painful discipline as will be needed when the soft pith has hardened into a rigid fibre. It seems order, that when the habits of early youth are ripened into the principles of manhood, our children should be still left struggling with a wayward and ungoverned temper, which early discipline might have subdued. I do not know why a stand should not be taken early against this common sin of childhood, as well as against those of lying and stealing, which, if detected, generally call forth such pungent measures as to convince the youthful culprit that no leniency or toleration can be hoped for on those points of offence.

Besides the mental suffering which inevitably comes to one who has passed the period of childhood, unchecked and unmollified by parental gentleness and firmness—for it is not violence which should be opposed to violence—there are often most tragical results from the evil temper, which bring a dark cloud over the soul, that no after sunshine has power to dispel. One moment of anger may cause a life of sorrow.

And her not God, in his gracious providence, given parents the very best time in which to secure a child against these fearful liabilities; even those morning hours, in which the first springing of thought and feeling in the transparent soul may be carefully watched?

I have now, in my mind, a little boy who, when six or seven years old, was the tyrant of the household. I have reason to think that there was opposed no discipline to his imperious temper.—The parents would say it was naughty to do so; but, as his naughtiness offered no barrier to unbounded indulgence, he cared little for the "soft impeachment," and I have thought, if this child at six years spurns all control, and, when contradicted in his despotic will, roars and storms like a fury, what will he do at ten years.

But I little imagined what would really be the result. It was, no less than, giving his father a blow, while in a passion, from the effects of which he never recovered. This was known; but how many domestic tragedies have been perpetrated and hidden deep in a parent's heart, God only knows.

In regard to this case, what heart must not shrink at the mournful thought that all the sunshine of this early manhood must frequently be quite shut off, and the soul chilled and shrouded in gloom, whenever memory brings back the *dark cloud.—By Zell, in Mother at Home.*

A Celebrated Writer says:—

"No woman can be a lady who can wound or mortify another. No matter how beautiful, how refined, or how cultivated she may be, she is, in reality, coarse and the innate vulgarity of her nature manifests itself there. Uniformly kind, courteous and polite treatment of all persons is one mark of a true woman."

What perils ladies will encounter to be in fashion! They are generally supposed to show timidity in the presence of wild cattle, but they would rather face a mad bull than not have their dresses *gored.*

Lay it down as a rule never to smile, nor in any way show approval, at any trait in a child which you would not wish to grow with his growth, and strengthen with his strength.

The hatred of those who are most nearly connected is the most inveterate.

Little Things.

Thousands are barely saved when almost lost, and other thousands lost when almost saved.—We were in a minister's family at the morning meal; a shriek of alarm came from the parlor—a flash of fire enveloped a dear child, sitting before the grate—there was a rush—a rescue. She was just saved! that's all! A second more, and mourning, crushed hearts, and a burned and dead child would have desolated the home. Barely saved!—Had it been lost, how terrible! But many sinners are almost saved, yet wholly lost. A little neglect, a little folly, a little excuse, a trivial influence, did the deed, decided the case for eternity!

WHAT COULD I DO?

What *could* I do if my husband should die! was the exclamation of a woman, who with tearful earnestness clasped her hands and begged me to think of her case and give her advice which should prepare her for a possible future.

This lady and her husband were living in their own house; were nearly out of debt. In the yard were shrubs and flowers, among which played beautiful children. Through the whole house was an atmosphere of song, of sunshine; of love. She was happy; she was in the full enjoyment of her girlhood's dream of life; yet, over her cheerfulness there flitted a shadow of a cloud. What if the strong arm, whose daily labor supplies our daily needs should be stricken by disease? What if the manly form should be laid in the grave? Hope whispered words of cheer; "no such dire calamity would befall her;" but prudence bade her prepare for the worst—and, as yet another infant lay upon her breast and breathed its sweet breath upon her cheek, it added pathos to her earnestness, as in the gray twilight hour she cried "what *would* become of my darlings if they had only me to depend upon?"

This is the skeleton in hundreds of households. It causes anxious days and sleepless nights. Its blight dispels cheerfulness. It goads on the husband and father to overwork, in order that his family may live upon his accumulations. He becomes grasping, nervous, irritable, dyspeptic. It is painful to dwell upon the consequences of the recognition of this "skeleton in the house." Let us, dear reader, look for an answer in the question at the head of this article.

First, let every girl be educated in some business; to some kind of honest industry. If she inherits a hundred thousand dollars let her be taught *how to do business*, that she may know how to take care of it. As riches can sometimes take wings and fly away, insist on having your daughters thoroughly learn some business; trading, telegraphing, reporting, horticulture, or some branch of agriculture, adapted to her strength and taste; or, let her learn chemistry in all its relations to the preparation of food, as adapted to the building up of vigorous bodies and establishing the good health of families; housekeeping as a fine art; the fashioning of garments, or tasteful arranging of millinery. Her taste and ability should determine what she should do—we only insist that be she rich or poor, she shall be trained to some kind of business.

In democratic America, a young man at the age of twenty-one or twenty-four, is expected to be qualified for some employment. Even the heir of John Jacob Astor mastered the business which he now follows. Let it, henceforth, be the same with our daughters, then, when fortune fails and homes provided by loved ones vanish, they will have something to fall back to, will be comparatively independent.

It is objected "this is not a woman's object in life, she will marry." Of course she will; but she should not in marriage sink her identity, and loose her usefulness. Let her still follow her business. "But, will not the duties of maternity interrupt all other occupations?" Not seriously, indeed! For the full and perfect development of her children it is necessary her mind should have its full scope and activity.

The Jews, it is said, are born traders. Why? because their mothers, wives and daughters are permitted to *share* the *cars* and *responsibility* of the various occupations and trades of their fathers and husbands. In all the cities and towns, where we have met these people, their homes are tidy and tasteful, their children are neatly dressed, and well trained. They do not neglect the beautiful and artistic in personal appearance, or adorning of houses.

They are beautiful, harmonious women: Many of them are learned, witty and wise, yet all the time familiar with the details of business.

The question, as asked by our friend, is difficult of answer. She had been a teacher in her youth, and should she be now thrown on her own exertions, we cannot know what she could do; but, in behalf of her daughters, and the children of hundreds of other mothers, we claim that girls be taught to look—not only to teaching and the few poorly paid female employments, but, over the whole field of the world's industries—for employment suited to their tastes, in which they can be pecuniarily independent.—*Woman's Pacific Coast Journal*

A Servant Wanted.

By a lady—whose husband usually dines out, and would only give trouble by being present in the evening and very early in the morning, and whose children are boarded out—a young lady to take the entire charge of the domestic department. She can have her afternoons, evenings, and Sundays to herself, with unlimited privileges for gentlemen's society in the kitchen. In that apartment are *fauteuils* and lounges, with a choice library of works of fiction. The beds are given out to make, the scrubbing is done by special contract, and the lady of the house cleans her own pots, and washes her own dishes. She will also, if agreeable to the one who takes the situation, instruct her in the piano and guitar, with Italian and singing. Wages no object. Apply at the Labor Exchange.

A Wives Income.

"Had your wife any income last year?" is one of the questions printed on the blanks distributed by the assessors o internal revenue. Last year some curious answers were elicited. For example, one person wrote in reply, "Yes, one boy;" another, "Her husband's love, and as much money as she wants;" a third wrote: "Yes twins—both well; willing to be taxed for *them!*"

The fountain of true politeness is a good and generous heart. It consists less in exterior manners than the spirit developed in conduct in the intercourse of courtesy.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICHTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORILLA which was exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY

Open daily from 9 A. M. to 5, and 7 to 9 P. M. Sundays 1 to

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending a notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers, also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2 50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

Miscellany.

SHOO FLY.

We have had so many inquiries relative to this remarkable sensational and popular song, that, by special request we give it entire with its history as was first published in the *Historical Magazine*:

This ludicrous yet popular song with the masses, and which is on the lips of nearly everybody, is quite old, having been sung by the negroes of Georgia before the War. It is well known that a fire engine bore the name of "Shoo Fly," in Savannah, as far back as 1856, having derived its name from this simple and senseless song. As a matter of curiosity to hundreds who have had the chorus ringing in their ears, on every hand, for several weeks past, we give the words of which may truly be termed the song of the period:

"I think I hear de angels sing,
"I think I hear de angels sing,
"I thing I hear de angels sing—
"De angels now are on the wing.
"I feel, I feel I feel—
"Dat't what my mudder said:
"De angels pouring 'lasses down
"Upon dis nigger's head.

"Chorus: Shoo, fly! don't bodder me!
"Shoo, fly! don't bodder me!
"Shoo, fly! don't bodder me!
"Shoo, fly! don't bodder me!
"I belong to Company G.
"I feel, I feel, I feel;
"I feel like a morning star!
"I feel, I feel, I feel,
"I feel like a morning star!
"I feel, I feel, I feel,
"I feel like a morning star!

If I sleep in de sun, dis nigger knows,
If I sleep in de sun, dis nigger knows,
If I sleep in de sun, dis nigger knows,
A fly come sting him on de nose,
"I feel, I feel, I feel—
"Dat's what my mudder said:
"Whenever dis nigger goes to sleep.
"He must cober up his head.

"Chorus: Shoo, fly! don't bodder me," etc.

We find the following in our exchanges about the authorship of this song. The Philadelphia *Ledger* informs its readers that Charleston now claims the authorship of the "musical gem," to which a correspondent signing himself "Co. K," in the Bethlehem *Times*, replies: "The above paragraph brought to my memory some facts which may prove to a certainty that Charleston, S. C., may justly lay claim to the origination of the above song. The facts are these: While the Forty-seventh Regiment P. V. were quartered in the city of Charleston, in 1865, I was a clerk in the Provost Marshal's office, under Major Levi Stuber, of Allentown. The Provost guards were quartered at the Pavilion Hotel, corner of Hasle and Meeting streets, in which hotel I heard the history of "Shoo Fly." One evening, an old colored woman, whom we called 'Aunty,' came in to sell peanuts. The guards were whistling and singing 'Shoo Fly,' or some parts of it, when old Aunty went up to one of them, and said: "Master, you must not sing that song, dat am a *bad* song, for her spirits won't rest.' This very naturally excited my curiosity; and in reply to my question as to what that *spirit* was, she told in substance the following story: When the Union prisoners of war were quartered in the race, in Charleston, it was her habit, with other colored friends, to take food to the starving Union men. One day they were caught throwing some corn bread over the enclosure, when the rebel guard ran his bayonet through her friend's breast. While she lay dying, under a blazing sun, myriads of flies swarmed over her, she uttered, 'Shoo fly, don't bodder me, for I am goin' to h—l!' These words were set to music by a young colored man who lived or worked on East Bay street, Charleston. This, Mr. Editor, was old "Aunty's" story of 'Shoo Fly,' and I have no doubt it can be verified by others belonging to the Forty-seventh Regiment, either in Easton or Allentown.

THE LATE ZERAH COLBURN.

This gentleman, who shot himself near Boston some few days ago, was a sad example of the uselessness of talent without moral balance or fixed principles in life. He was a nephew of the celebrated natural mathematical calculator whose name he bore, and was born in New York State in 1832. He spent his early days at hard labor on a New Hampshire farm, and developed such mechanical ability that he filled important positions in locomotive works at Boston, Richmond, and New York, while still a very young man. Next he became an editor and proprietor of the New York *Railroad Advocate*, and possessed such powers of memory that for months he kept no books, but trusted to his recollection in regard to the falling in of subscriptions and the omissions of advertisements. It is said that he never made mistakes in this particular. But, though successful, he was too restless to remain in one place long. After embarking in land speculations in Iowa, and afterwards engaging in the manufacture of patent rifles, he went to England, where he became editor of the *Engineer*. After a few months' stay abroad, he returned to this country and started a mechanical journal in Philadelphia. It was not a success, and he soon went back to England where he resumed his connection with the *Engineer*, conducting the paper with great skill, and becoming famous as an expert in regard to difficult engineering problems. Overwork and irregular habits gradually shattered his mind. He arrived in the United States, a few weeks ago, a broken down man, and, in a fit of insanity, put an end to his life.

The following is a copy of a letter received by a village schoolmaster:—"Sur, as you are a man of nolledge, I intend to inter my son in your skull."

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre-emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed.

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, June 2.

The Grain Market is not active, in fact none is going abroad, our Mills are not working, and but little grain coming in although it is known there is still a large surplus of old grain on hand—some estimate even as high as 150,000 tons, we say 100,000 tons.

Our holders of grain, we mean the farmers, should have sold in May, when the price was up, then was their time, provided they could sell. Often these prices are speculative, not real, and we think no large amount could now be sold, even at the figures now set, as no wheat is going abroad, and ships are all waiting freight, and Mills not working either.

When our producing farmers shall promptly sell their grain at harvest, they will then realize actual profit—there is no safety in the speculating system for them and this they can figure out by the experiance of the, last six years.

As grain has fallen in price, and no sale for it, some new effort will be made for a *starter*, some new North wind, or some *scorcher*, or something will come up to *spoil the crops!*

Barley and Corn but little inquired for and dull.

Oats more active, while other produce sells steadily.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State.

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

Send Us Samples.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

VINEGAR. HOW MADE FROM CIDER, WINE, MOLASSES, OR SORGHUM, in Ten Hours, without using drugs. For Circulars, address F. I. SAGE, Vinegar Maker, Cromwell, Conn.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

Farmers' Headquarters. WARREN & CO. 320 Clay Street, up-stairs.

SPLENDID PREMIUMS!!

1870!

OUR SEVENTEENTH YEAR

AND

THIRTY THIRD VOLUME

OF THE

"California Farmer."

With the New Volume in January we begin our SEVENTEENTH YEAR of LABOR with this Journal.

THE CALIFORNIA FARMER PREMIUMS.

The CALIFORNIA FARMER will club with the following Magazines and Journals, and furnish them for the year 1870 at the following rates.

The New York Independent,

PREMIUM ENGRAVINGS,

The California Farmer and the Independent both for $7 50, and to present them with Richie's splendid steel engravings of GRANT and COLFAX, the price of which is $2 each, thus giving them these two Splendid and Popular Pictures worth $4, and both these Papers for $7 50.

The CALIFORNIA FARMER and the New York Christian Union, new series, Edited by Rev. HENRY WARD BEECHER, $7 50

The CALIFORNIA FARMER and the Harper's Monthly, Weekly and Bazar, $14 00

The CALIFORNIA FARMER and either of Harper's Magazines delivered post paid, $4 50

The CALIFORNIA FARMER and the New York Weekly Tribune, $4 50

The CALIFORNIA FARMER and the American Agriculturist, $4 50

The CALIFORNIA FARMER and the New York Monthly Horticulturist with extra Steel Engravings of "Country Life," $7 00

The CALIFORNIA FARMER and the Phrenological Journal of New York now in its 50th Volume, $7 00

The CALIFORNIA FARMER and the American Stock Journal, $5 50

We shall add others with our next issue.

Any other Journal or Periodical desired we will furnish with the FARMER on the most liberal terms when desired.

The Terms of the FARMER will remain the same—$5 per year, $3 for six months, (gold price) and $1 extra when payments have been delayed and these terms are unchangeable. A liberal allowance for clubs; when five copies are paid for six copies will be furnished.

We call attention to the Premiums offered, and the Union of other Journals with ours.

WARREN & CO., Editors and Publishers,
320 Clay St., San Francisco.

Santa Clara College, S. J.

SANTA CLARA, CAL.

Conducted by the fathers of the Society of Jesus.

THE NINETEENTH ANNUAL SESSION OF THIS Institution will commence on THURSDAY August 19th, 1869.

TERMS—Tuition in the Classical and Scientific Departments; Boarding and Lodging; Washing and Mending of articles; School Stationery; Medical Attendance and Medicines; Fuel, Light, Baths, etc., per session of ten months, $300

For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Varsi, S. J., St. Ignatius Church, Market street, between Fourth and Fifth, San Francisco.

REV. A. VARSI, S. J. President.

A Bargain!

Fine Homestead on the Mountains!!

A very fine COTTAGE HOME, in Eldorado County, containing Twenty Acres of Choice Land, pleasantly situated, and with pleasant surroundings.

A handsome Cottage House of Five Rooms on the first floor, and Two above, with every convenient arrangement for Family Comfort—Closets, Bath-room, Cellar under house, etc.

The outbuildings are, a good Carriage House, Wood shed, Chicken House, etc.

A Vineyard of Five Acres, Six and Eight years old from which 1,500 Gallons of Wine have been made this Year

A good Orchard of 500 Trees, Five to Seven Years Old all Good Varieties of Fruit. The Eleven Acres of Choice Land is best for Orchard, Vineyard, or Garden Culture.

There is any quantity of "Uncle Sam's" land, of Best Quality, that can be had at Settler's Prices.

The House is nicely furnished, and, to a person of taste, this place can be made a "little Paradise"

The House and Grounds will be sold a GREAT BARGAIN, if applied for immediately, and will be sold for Less than the Cost of the Buildings!

Apply to Editor of FARMER.

TRUE OPIUM SEED,

JUST RECEIVED—a Small lot of the TRUE OPIUM POPPY SEED, of a Superior Quality.

For Sale at "FARMER" OFFICE.

Herb Seeds.

Complete Collection of all kinds of HERB SEEDS of Superior Qualities.

For Sale "FARMER" OFFICE.

CAREFUL DIRECTIONS.

We would most particularly desire our correspondents to be very careful in sending their Letters, Orders and Remittances to us, as there are several firms of Warren & Co., and unless the address is very plainly marked, mistakes will arise.

All Letters, Orders, Parcels, &c., intended for this office should be addressed WARREN & CO.,
California Farmer Office

CALIFORNIA FARMER AND JOURNAL OF USEFUL SCIENCES.

VOLUME XXXIII. SAN FRANCISCO, CALIFORNIA: THURSDAY EVENING, JUNE 9, 1870. NUMBER 21.

The California Farmer AND Journal of Useful Sciences.

PUBLISHED EVERY THURSDAY EVENING BY WARREN & CO.

OFFICE—No 320 Clay street (up stairs), below Battery SAN FRANCISCO.

TERMS OF SUBSCRIPTION.

By mail, for one year, $5; for six months, $3. For a club of five new subscribers, a sixth copy will be sent gratis. When payments are delayed six months $1 additional per year will be charged, and $1 each year also for every year delayed City subscribers, delivered by carrier, 12½ cents a number $6 a year in advance.

☞ Advertisements and Subscriptions must be paid for in advance. Payments in Gold or Silver.

☞ All letters on business connected with the office should be addressed to WARREN & Co. PUBLISHERS.

LIST OF AGENTS:

Our Subscribers can send money BY MAIL safely and at our risk at the Post-office, and the money will come direct and sure.

Wells Fargo & Co., at all their Offices in this State and Territories, throughout the States generally, and in all parts of the World.

Wise & Bauer, Washington street, San Francisco.

EUROPEAN.

From our Special Correspondent.

PARIS, May 21, 1870.

AGRICULTURAL SOCIETIES OF FRANCE.

The Agriculturists' Society of France—which is supported by voluntary subscriptions, is working assiduously to promote an "International Exhibition" of Agricultural Implements and produce for the ensuing year. The Society is not very wealthy, but it has voted 50,000 fr.—being about one-sixth of the estimated expense. The remainder is proposed to be raised on the guarantee principle, which was so successful in the case of the Universal Exhibition of 1867. Each guarantor's liability would be fixed at 1000 fr.—or, 500 fr., according to the number of subscribers. The city of Paris is expected to award something towards the sinews of war—and if all fails, an appeal will be made to the National purse. No foreign live stock will be permitted, and the juries will be elected, one-half by the Society, the other, by the exhibitors.

SUGAR BEET, AND ITS MANUFACTURE

Now that the culture of the beet is almost everywhere assuming such great proportions, a French implement maker has brought out a very simple and effective machine, for lifting the roots. It is in the form of a plow on wheels, with a sock pointing into the soil to raise the roots, and sort of a swinging mouldboard, to throw them aside, when women and children can follow and trim the bulbs. This blind plow, worked by a pair of horses and one man, can get over two and a half acres per day Further; a pressing machine has appeared, for the extraction of the juice of the beet, which effects in ten minutes what the ordinary process of maceration requires as many hours. The pulp is made to pass between two rollers, exerting a pressure equal to two atmospheres—the pulp passing over the cylinders—the juice perfectly pure flowing through the perforations into the fermenting vats. The pulp is taken up a second time and pressed, when the necessary acid is added. The pulp by this process preserves for a long time its quality for feeding purposes, the juice ferments more equally, and a higher per centage of alcohol obtained. One of the principal obstacles hitherto experienced in the extension of the culture of beet for sugar, was the expense of carting the roots to the graters of the factory. In almost all the large sugar manufactories in France pipes varying from three to nine inches in diameter, communicate with the pulping depots, erected in the vicinity of the producer. In some cases a street line of pipe communicates over a distance of seven miles—irrespective of branches, thus saving the Farmer carriage, and enabling the manufacturer to erect his establishment close to a river, canal or railway, and save expense in the transport of coal, lime, animal charcoal and machinery. One factory alone has 228 miles of communicating pipes laid down, to convey the juice of 360,000 tons of beets. The juice by admixture with hydrate of lime, is preserved from any alteration in its properties, and the pipes are sunk along the road-ways at a depth of three feet.—The Farmer while thus disposing of his beets, almost on the field, has the pulp equally convenient to feed and fatten his stock.

POULTRY RAISING, AND FATTING THEM.

The climate of France is peculiarly favorable for the rearing and fatting of poultry, and although there is a large consumption in the country itself, enormous quantities are exported to the English Market.

A. M. Martin has patented a very remarkable system for fatting, principally chickens, but equally successful for all barn yard fowls. His establishment is situated in the centre of a park of nine acres, on a rising, but sheltered position. Within a vast rotunda are placed three large octagonal cages, comprising five stories each, and easily moving on a pivot. Each story is divided into a series of little cages, containing five compartments in each of the latter is a chicken tied down by the feet, by a strap, leaving the head and wings free—a story accommodates forty birds. The attendant on a seat, which rises and lowers at will, stops at the several stories—with the left hand he seizes the chicken by the bill, opens the mouth, introduces a zinc socket into the throat. The socket communicates by means of a flexible hose, with a receptacle wherein is placed the prepared food.—Touching a piston with his foot, sends the required dose into the stomach of the bird. A dial marking the exact quantity to be administered, and which varies according to age, variety, and degree of fatness. The chickens do not dislike this novel mode of being fed, as when over, they shake their wings and begin picking up the crums. The food is very liquid, consisting of barley flour, maize ditto, and lard beaten up with milk. The birds are fed three times a day—an hour suffices to feed 200. The cages are daily cleaned, and washed with a solution of sulphate of iron—and are so constructed that the excrements fall by an inclined plane into a central reservoir, with cut straw, forming a valuable guano. The chickens are purchased round in the country when four months old, and fattened in eighteen days. Before being killed, they are placed for 24 hours in a dark but well ventilated room—afterwards they are hung up by the feet—tightly enclosed in a bag, leaving the head free—a sharp wire pierces the neck, and death is instantaneous. They are then plucked, drawn, and washed, tightly wrapped up in a wet cloth to cool, and sent to market, at the rate of 40 a day—sold wholesale for two francs per pound, and yielding a net profit of 45 per cent.

Home Correspondence.

GILROY, CAL., JUNE 2d, 1870.

COL. WARREN:

Dear Sir—Your favor of the 26th ult., was received, and as it touched the matter in which as a merchant, miller, and lumber dealer, I am materially interested, I take pleasure in answering, having carefully considered the crop question for years.

In the immediate vicinity of Gilroy, West, the crops are average. North, for several miles, quite light. South, to the Pajaro, and South-East through Old Gilroy, to and beyond Soap Lake, wheat generally light; barley fair to good. Between here and San Juan, and around the latter place, the crops will be fair to light.

As you advance South, into the plains, between the Pajaro and and San Benito rivers, the crops gradually decrease, until in some districts for miles no cereals will be harvested, and even the hay crop will be very light. This state of things continues into all the Higher portion of the Salinas Valley, and thence South. But notwithstanding this general failure, there are many instances where an account of *good* cultivation, an oasis appears in the *midst* of barren surroundings. You may ride along and see the line of demarkation between the *shallow apology* for plowing so common in our country, and the deep and thorough culture taught by experience, and they are so clearly defined as to strike the most obtuse perception. On the "Bolsa Rancho," side by side-short, parched, brown, sickly straw, six to eight or ten inches high, and green handsome wheat, growing finely and headed out well, which will make a fair crop. Upon the "San Justo Rancho," and elsewhere, the same things can be seen. Thomas H. Swain, at Hollister, has only three acres of good wheat, which was plowed deep by a green Englishman, during Mr. Swain's absence, and for which Mr. Swain actually discharged the plowman!! Mr. Swain says, now, however, that "hereafter he will always plow deep, and seed early!!" *Let all attend and do likewise.*

IN EVERY INSTANCE where land was summer-fallowed or plowed deeply and seeded early, the crop is good. Merely scratching the ground will always fail in dry years. In all our strong heavy lands especially, *the plow must be put down.* For the first plowing the gang will do, but where the land is not plowed in the spring and summer-fallowed, the first plowing must be followed after the first rains with single plows and *put down* 12 to 14 inches. Then a crop is always sure!! "Tell them that!!" Our farmers are slow to learn, but they will eventually be *driven to* this course, so that our present light affliction will eventually work out for us a far more exceeding degree of agricultural success and prosperity than has yet been obtained by any people anywhere.

Yours truly,

JNO. BROWNE.

IRRIGATION AND CULTIVATION CONTRASTED.

EDITOR FARMER:

A stranger calls upon a friend to whom I had written a letter, not intended for publication, and asked for a copy of a portion of it relating to Irrigation, this was given without any authority to have it published, and without any expectation that it would be. Judge of my surprise therefore at seeing it in print, and my name in full included, this was published in the *Bulletin*, a paper that I take, and it appears to me that I was put up for a mark to be shot at. My letter was published on the 14th, and two days after appears in the *Call*, a paper I never see, a rather impertinent patronising criticism on what I had written, intimating that I depend upon the ocean fogs to maintain my crops, when I look upon them merely as auxiliary, for I say distinctly that I place my entire dependence on the natural moisture. The depth to water is 4 feet, not 8 feet.

I am not an old resident, but a new one, having been here but five months, and "X Y Z" must be astonished to suppose that the vineyards refered to were mine. Had I written it for publication I would have endeavoured to make my meaning plain to the most obtuse. He objects that I am "not to the *Manner born*." I suppose he means *Manor*; I am glad of it, if I was, I suppose I should be a mud lark, like the rest of them, I also object that I depend upon theory and not upon facts, whilst the truth is, I am skeptical regarding every thing but proven facts. I am particularly skeptical as to the advantages of irrigation, except on a very small scale. The idea of irrigating a large farm is preposterous, and if it could be done, where is the water to be obtained. He says that all the vineyards of Anaheim were irrigated in January, after the pruning—I dispute this, I saw but two that were so treated, their gardens and fruit trees were watered, and also their little patches of grain, but their grapes do not need it, and their fruit trees have been sadly injured by it. I venture the assertion that not one fifth of the vineyards have been watered. He says 5 or 6 inches of rain has fallen, I am very certain that there has not been four inches, and that the heaviest shower only penetrated three inches in hard ground and seven inches in the soft. In fact the rain has amounted to nothing at all, as the north winds (unusual here, I am told,) soon dried it up. But I am tired of correcting "X Y Z's" mistakes and decline to bestow any further attention upon him, unless he ceases to hide in a ditch, and conceal his name behind the fag end of the alphabet.

It is unfair to make my operations here a test of the advantages of deep plowing and subsoiling, as compared with irrigation. I have been behind hand all the season, I could not commence plowing until the first of February, on account of my buildings, my teams were hauling lumber, etc., and when I did begin, the ground was dry and hard from four to six inches deep. Below this the natural moisture was reached—six horses dragged my gang plow through it an average depth of 13 inches, turning a land about 18 inches wide. It was necessary to harrow and drag the ground immediately after plowing, to pulverize the clods, or in two days they would be as hard as stones.—Occasionaly there were spots of "hard pan," where the plow would not penetrate more than 8 or 9 inches; on that land no crop has grown, the moisture could not rise, but wherever the plow reached the underground moisture, that moisture soon rose to the surface, and every thing sown upon it has grown quite as well as I had any reason to hope. Barley sown the first week in March, grew to a height of four feet on the best ground, (that is, the most moist,) and gradually diminished from that down to nothing; according to the quantity of natural moisture, available for the growth of grain. It will be seen that my crop was grown and sustained entirely by the subterranean moisture, for on the hard pan spots, the showers in March, caused the grain to sprout and although the dews have kept it alive, it has made no return. The heads when cut for hay promised to make full plump grain if it had been allowed to ripen. No other crop about here sown at the same time has yielded anything. Some of my neighbours who sowed early, although the plowing was in most instances shallow, have got very fair crops, but all without exception who plowed shallow, and sowed late have failed to get anything.

In every case I found that land the wettest that had been the deepest plowed, and had been the longest time accumulating moisture, the last land I plowed was about 50 acres, commenced in the last of February and finished about the first of April, the work being done at intervals. When commenced the weeds were about five inches high and before it was finished, mustard and malva five feet high were plowed under. After the ground had lain one month, I commenced to replow, and plant with corn and beans, and at the last with late potatoes. Eighteen acres of the moistest land was replowed and planted, and the remaining thirty-two acres was all subsoiled in addition, for some portions of it was still quite dry, but with the exception of from one to three inches on the surface which was dry and dusty, the undersoil of the greatest portion was remarkably moist. In planting I was obliged to cover the seed more deeply than I liked to ensure sprouting, on account of this surface dust which would have prevented it. On the subsoiled ground the plants will have under them, at least ten inches of loose moist soil to extend their roots in.

I feel sure they will grow and do well, and as there seems to be some interest felt in the matter I will report faithfully from time to time, what the result is, although I must again protest most decidedly that any failures I may make should not be considered as an argument against deep plowing as my work has not been done in such a manner as to satisfy me, but as a sort of a make shift, because I had not time to do better. Next year I will be ready to test the question with any man, or number of men, who favor the irrigation humbug, it is a mistake to suppose that all the farmers of Los Nietos irrigate, the owner of the best corn and barley crop that I saw there ten days ago does not irrigate, but on the contrary, subsoils, instead of giving his corn a drink of water at tasseling time he gives it when about two feet high a good stirring with a subsoil plow. An irrigating ditch runs through his land, but he does not use it, he says that excessive use of water kills the ground and makes it heavy and sodden, and that if not worked thoroughly after each soaking it becomes a mass of hard dry clods, which are very difficult to pulverize. This is exactly my experience; I tried it one season and it required three years cultivation before the soil recovered its former condition—gardeners say that it takes three years of constant cultivation before their land is brought to the highest state of productiveness.

When Farmers can be persuaded to thoroughly pulverize their soil to the depth of at least twenty inches, with plows and subsoil plows, we will hear no more complaints of drouth and want of rain. The layers of mellow soil, cool and moist, will and does absorb and retain the moisture, both from the earth and air, receiving from the latter at night more than an equivelent for what it looses by day, and will be always ready for the plow this is not new but has long been known to Intelligent and educated Farmers. And I think it is the duty of those who possess the requisite knowledge, to concentrate their efforts on some one Agricultural Journal, that their less fortunate brethren may learn a better system of farming than the skimming style which is now impoverishing both land and land owners in California.

Thirty years ago the *Albany Cultivator* condensed the knowledge and experience of a large number of intelligent and practical Farmers in a extensive section of country, and it is just such a paper that this state now needs. Almost all of our farm management is necessarily different from theirs, and an Eastern Journal is of little use to us, we want a paper that can concentrate the farming experience, good and bad, of the different sections of the state. Your paper has been long established and would answer the purpose perfectly if you could induce those who have the requisite knowledge to concentrate their efforts upon it.

I suggest this in the hope that others better qualified may join in the good work, and endeavour to change our system of farming from one of the worst to one of the best in the country.

As my name has been already mentioned, I shall sign it in the future to any thing I may write.

Yours truly,

WM. R. OLDEN

Anaheim, May 31st, 1870.

WALKING AROUND.

LETTER NUMBER TWO.

(*Concluded from our Last.*)

DEAR COLONEL.

There appears to be the foundation of a very large building on the point just below us. "That is to be a Warehouse for Adams & Co., the great Express and Banking House, they have immense wealth and their enterprise extends all over the country. Their Banking house actually contains cart loads of gold and silver always there ready for their customers. Perhaps *they* will take our money? Suppose we go down and see? What queer looking building is that with a great black ball on the flag staff? There it goes up. Now it drops again. "That signifies that it is twelve o'clock, noon." Oh! I can read "*San Francisco Observatory.* What splendid building is that on the corner of the street below with the great dome, with stained glass around the sides of the cupola? "That is Dr. Wright's building, calculated for an Assay Office and Banking House, by far the finest in the city." It may be that is the best place for our money after all. That is a nice looking building on the opposite corner, "Lucas, Turner & Co.'s Bankers," Mr. Sherman, a very nice sort of a man is the manager. They may be good enough, but the other shows wealth and stability, and we prefer to have our money where it is safe—where we can see it every day. What miserable old shanties are these, built upon charred and half burned piles? "Some temporary stores erected after the late fire, and occupied by some of our heaviest merchants who are now in better quarters.

Down Jackson street, up Sansome, here are some nice stores, the best in the city, and such quantities of merchandize. Fire-proof stores, we have heard of them, but here we have them with great iron shutters, and such thick walls, perfectly safe, so they say, and perhaps they are for iron bars and grindstones, but not comfortable to live in surrounded by others in flames.

"*Franklin House.*" Whoever heard of a house by that name before? and yet strange to say there is another on the corner below "*Franklin Hotel*"—a base imitation. This is the real "*Franklin,*" the other wants to be, and is in name, but what a house, not a lath nor scarcely a board partition. There canvass and gaudy paper, and for a *wonder a Bar Room* hung with high colored pictures and a mirror over the Bar. Will you drink? The least drap will not hurt you.

There is where they are preparing to build the Custom House. "What are they driving those long piles into the mud for? and such quantities of them, nearly as thick as they can place them and thirty or forty feet long. "They find it necessary to get a foundation" on which to lie the blocks of granite that we see lying around.

That building on the corner of Sansome and Washington streets, was framed in the Eastern States and brought here in a ship already to put together, and so did those further down the street, there is no mistaking them. "*What Cheer House*" what does that mean? Another Hotel, it might have been the "*Washington House,*" that name would sound well for a hotel; what a wonder there are none of that name. Does "*What Cheer*" mean, have you any thing to eat? Suppose we go and see. "Payable in Advance." That man with his sleeves turned up with an apron on, is the proprietor, Mr. Woodward. But there is such a crowd we will go around to the "*American Exchange,*" or to the "*Tehama House.*" There is style for you, but never mind, we don't see any "payable in advance," so we can stand it, no matter about the price.

Ah, there is a Boston man and no mistake. "*Cochituate' Baths.* Is it possible they require bathing in this country. Oh! yes, sometimes now since they have been in the way of wearing "*boiled shirts,*" formerly all wore colored shirts and it did not matter so much.

There are some miners just come down on their way to *the States.* They say the mines are all dug out, and they have quite enough of California. Flour one hundred dollars a barrel in the mines and none to be had at that. We think that fellow is homesick. That man over there with a red sash around his waist, just came down from the southern mines; he is going East for his family, will be back in three months. He says he has cleared three thousand dollars in the last nine months and prospects never looked better. He came in the spring of '50. That man with the white hat came early in '48. He says a man could do very well when he first came here, but there is not much chance now—so many are coming. He has not made anything, but he had a friend that took out five thousand dollars in little better than three months. But they don't find such strikes now a days. He says he would leave the country if he could get money enough to pay his passage on the steamer. We do not believe he will ever go home. One man says he has been prospecting the last eight months but could not strike anything that would pay four or five dollars a day. He struck one lead that panned out pretty well, but some fellow jumped it while he was on a prospecting tour further up the river. He think's mining is poor business when you cannot average more than half an ounce to the hand per day. We think he never ought to have left the sure thing he had down East, "four and six" a day seven months in the year and found. Every man has a story of his own, his peculiar misfortune and how it happened. But all agree that the mines are completely given out, and sighs for the good days of '49, and spring and summer of '50.

We had intended to go to the mines ourselves but it seems there are none to go to, at least none that will pay more than five or six dollars per day to the man, and that won't do for us you know coming all the way to California for that. But we will see you again—here comes some of our fellow passengers. Good day Colonel.

PHILOMEN.

REMEMBER THE MEASURES.

Many persons are often desirous to know the weight of certain kinds of produce per bushel, we here give them so they can copy it into their Register and always know them:

Wheat, Clover Seed, Potatoes and Beans,	60 lb
Corn, Rye, Flaxseed, Onions,	56 "
Barley 48 lb, Buckwheat,	52 "
Corn on the cob 70 lb, Oats,	35 "
Hemp Seed 44 lb, Timothy Seed,	45 "
Blue Grass requires only	14 "
Dried Peaches 33 lb, Dried Apples,	24 "
Sweet Potatoes,	50 "

Agriculture.

"ONLY A GRAIN OF MUSTARD SEED."

BY MRS. ELMA FOLWELL.

"Only a grain of mustard seed,"
Kissed by the sun and dew,
Borne on the wind its rugged way,
Far in some dell, there hidden lay,
Where it in stature grew.

"Only a grain of mustard seed!"
Truth, in its mighty sway,
Flower and fruitage will riponed own,
Though amid tares it was wildly sown,
And latent though it lay.

"Only a grain of mustard seed!"
Hope, but a whispered word,
Is strong to check sin's sad career,
And wipe away the sorrowing tear,
When dropped in deeps unstirred.

"Only a grain of mustard seed,"
Sunk in the slumbering soul.
Wakens high deeds of immortal worth,
Missions of love that gladden earth,
As long as ages roll.

CHOOSING A WIFE.

Cobbett is said to have been first attracted toward the woman whom he afterwards married by the vigor with which she whirled a mop. Cooke, the celebrated tragedian, became so enamored at the rump steaks served to him at a certain coffee-house, that, in order to perpetuate his enjoyment, he installed the kitchen maid in his own house as Mrs. Cooke. Both of these women proved excellent wives, though they were by no means equally appreciated. Mrs. Cobbett was always tenderly cherished by that rude demagogue, her husband; but Mrs. Cooke had little but hard knocks in return for her devotion to the drunken actor.

If a man, in these days of delicate and superfine women, waits for a wife until he finds one capable of whirling the mop or cooking a beefsteak, he must needs be patient, and will probably die a bachelor. Our marriageable girls make no pretention to the rude vigor of a Mrs. Cobbett, or the humble skill of a Mrs. Cooke, yet they might possess both, and have none the less beauty of person and delicacy of sentiment. Fielding's sweet wife could at the same time dress the dinner "and herself as neat as any lady who had a regular set of servants could have done." Mrs. Somerville, the woman of science, runs readily from the celestial mechanics to the cookery book, and mixes a pudding with the same accuracy as she solves a mathematical problem. A wise and true woman will a ways strive to make home attractive to her husband and children. In doing so she is more satisfactory to herself as well as to others This we know is not to be done by a mere display of fine feathers and fine airs, which, however, bravely they may show abroad, soon droops in the close atmosphere of home.

If our women would give us something more elevated than mere frivolity of dress and manners, in exchange for the solidities of a good dinner, husbands might try to spiritualize themselves so far as to dispense with anything so gross and material as beef and pudding. If wives would strive to become learned, witty, or wise, men might reconcile themselves to the loss of what they perhaps cling to overfondly, the material comforts of home. If the digestion of their overfondly, the material comforts of home. If the digestion of their overdone steak or underdone pudding was facilitated by the piquancy of a *bon mot*, or the acuteness of an ill-provided dinner made up for by the fullness of learning and philosophy, it is possible that husbands would be less disposed to grumble at the domestic short-comings of their wives. To expect them, however, to behold with complacency the insolent triumph of chignon and skirt, while their purses and stomachs are alike collapsing, is expecting too much from material good nature.

It is far from our purpose to persuade women to make mere household drudges of themselves. We desire that they should aspire to become complete wives, not only capable of fulfilling the lowest of their Domestic duties, but the highest—to cook beefsteaks properly if need be—and to enliven home by their intelligence and elevate it by refinement.—*Harper's Bazar.*

He Put His Foot in It.

They tell a good story of an old-fashioned, wealthy farmer. He was never known to have anything in the line of new apparel but once; then he was going on a journey, and had to purchase a new pair of boots. The stage left before day, and so he got ready and went to the hotel to stop for the night. Among a row of boots, in the morning, he hunted and hunted in vain. The stage was ready and so he looked carefully around to see that he was not observed, put on a nice pair that fitted him, called the waiter and told him the circumstances, giving him ten shillings for the owner. The owner never called! *The old gent had bought his own boots!*

A jolly Farmer returning home in his wagon after delivering a load of produce, is a more certain sign of national prosperity than a nabob riding in his carrage to the opera or theatre.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWENTY-ONE.

MUCK, HOW TO UTILIZE IT.

The time will be, I cannot doubt, when chemists can tell us the exact positive or relative value of a cord of Muck—how this swamp or that pond affords a choice article, while the product of another will hardly pay for digging. There may be chemists whose judgment on these points is now worth far more than mine, since mine is worth exactly nothing. I do know, however, that Muck is a valuable fertilizer, and that digging and composting it does pay. I judge that I have transferred at least three thousand loads of it from my swamp to my upland; and the effect has been all that I expected. Let me speak of Muck generally, in the light of my own experience.

Wherever rocks in ridges come to the surface of a valley, plain, or gentle slope, water is apt to be collected or retained by them, forming ponds or shallower pools, which may or may not dry up in Summer, but which are seldom dry late in Autumn when plants are dying and leaves are falling. The latter, caught in their descent by the harsh winds of the season, are swept along the bare, dry ground, till they strike the water, which arrests their progress and soon engulfs them.—Thus an acre of watery surface will often collect and retain the dead foliage of five to ten acres of forest; and next Fall will render its kindred tribute, and the next, and the next, for ever.—There cannot be less than fifty millions of acres of Swamps in our old States (including Maine;) whereof I presume the larger area was covered with water until the slow contributions of leaves and weeds filled them above the level at which water is no longer retained on the surface. And still, they are so moist and boggy, and their rank vegetation is so retentive, that the weeds swept in from the adjacent hills and glades are firmly retained and aid to increase the depth of their vegetable mold, which varies from a few inches to twenty and even thirty feet. In my old County of Westchester, I roughly estimate that there are at least five thousand acres of bog, whereof but a very few hundreds have yet been subdued to the uses of cultivation.

Whoever digs a quantity of Swamp Muck and applies it directly to his fields or garden, will derive little or no immediate benefit therefrom. It is green, sour, cold, and more likely to cover his fields thickly and persistently with Sorrel, Eyebright, Rag-weed, Parsley, and other infestations, than to add a bushel per acre to his crop of Grain or Roots. And thus many have tried Muck, and, on trial, pronounced it a pestilent humbug.

But let any farmer turn his whole force into a bog or marsh directly after finishing his Summer harvest (when it is apt to be dryest and warmest,) and, having freed it of water to the best of his ability, dig and draw out one hundred cords of its black, oozy substance, and he will know better than to unite in that hasty judgment. If the bog be near his farm yard, let the Muck be shoveled at once into a cart and drawn thither; but, if not, let it be simply brought out in wheel barrows and deposited, not more than two feet deep, on the most convenient bank that is well drained and perfectly dry. Here let it dry and drain till after Fall harvest, and then begin to draw it gradually into the yards, and especially where it may be worked over by swine and scratched over for seeds and insects by fowls. Assuming that the farm yard is lowest in the center and allows no liquid to escape save by evaporation, the Muck may well be dumped on the dryer sides; thence, after being worked over and trampled through and through, to be shoveled into the center and replaced by fresh arrivals. A hundred cords may thus be so mixed and ripened as to be fit to draw out next May and used as a fertilizer for Grain or Roots, though, if not so treated, it should lie exposed to sun and wind a full year; being applied in the Fall to crops of Winter grain or spread upon the fields to be planted or sowed next Spring. All the manure made during the Winter should be spread over that which lies in the yard at least monthly; and then new Muck drawn in, to be rooted or scratched over, trampled into the underlying strata, and overspread in its turn. Thus treated, I am confident that each hundred cords of Muck will be equal in value to an equal quantity of manure, though it may not give up its fertilizing properties so freely to the first crop that follows its application. I have land that did not yield (in pasture) the equivalent of half a ton of hay per annum when I bought it, that now yields at least three tons of good hay per annum; and its renovation is mainly due to a free application of Swamp Muck.

To those who have a good stock of animals, with Muck convenient to their yards, I would not recommend any other treatment than the foregoing; but there are many who keep few animals, or whose Muck beds lie at the back of their farms, two or three hundred rods from their barns; while they wish to fertilize the fields in this quarter, which have been slighted in former applications, because of the distance over which manure had to be hauled. If these possess or can buy good hardwood, house made Ashes at twenty five cents or less per bushel, I would say, Mix these well, at the rate of two or three bushels to the cord, with your Muck as you dig it; work it over the next Spring, and apply it the ensuing Fall, so as to give it a full year to ripen and sweeten, and it will be all right. But, if you have not and cannot get the Ashes, and can procure dirty, refuse Salt from some meat packers, or wholesale grocer, apply this as you would have applied the Ashes, but in rather larger quantity; and, if you can get neither Ashes nor Salt, use quick Lime, as fresh and hot from the kiln as you can apply it. The best Lime is that from burned Oyster Shells; I consider this, if nowise slacked, nearly equal to refuse Salt; but Oyster Shell Lime is too dear at most inland points; and here the refuse of the kilns—that which is not good enough for mason work—must be used. Usually, the lime burner has a load or more of this at the clearing out of every kiln, which he will sell quite cheap if it be taken out of his way at once; and this should be looked for and secured. Being inferior in quality (often because imperfectly burned,) it should be applied in larger quantity—not less than four bushels to each cord of Muck.

I will not here describe the process of mixing Salt with Lime commended by Prof. Mapes, because it is not easy to bring these two ingredients together so as to mix them with the Muck as it is dug; and, though I have used them after Prof. Mapes's recipe, and purpose to do so hereafter, I do not feel certain that any positive advantage results from their blended application as a Chloride of Lime. If I should gain further light on this point before completing this series, I shall not fail to impart it.

Salt for Cabbage Plants.

"G. W. T.," Rahway, N. J., writes to the American Agriculturist that he considers salt necessary to the best development of the cabbage, especially in places far from the coast. He finds them more crisp, of better flavor and to keep better, when salt is used than without. A few days after setting out the plants, and when they are damp, either after a rain or when the dew is on he takes a small dish of fine salt, and walks along the rows, sprinkling a little pinch of salt on the centre leaves of each plant; when the leaves begin to grow, he repeats the salting; and when the centre leaves begin to form the head, applies salt again, scattering it over the leaves; after this, he looks them over occasionally, and if he finds any plants that do not head well, or appear diseased, sprinkle salt over freely. This will save all such plants. A quart of salt is sufficient for five hundred plants in a season, though more can be used with safety.

We have known a good cultivator on the seacoast who deemed it beneficial to give his cabbages and cauliflowers an occasional watering with seawater.

Let our cabbage growers try this experiment—it may kill the cabbage lice, and there is no risk in trying it, for the lice will kill the cabbage if the salt does not.—[Ed. F.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal, and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 14 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 22 2-100 per cent. For life-sustaining properties to all stock are—and to sudden changes of weather or over-driving! [illegible]

For MILCH COWS particularly valuable, increasing the quantity of milk and improving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the mash of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase to about two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other food—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $43 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

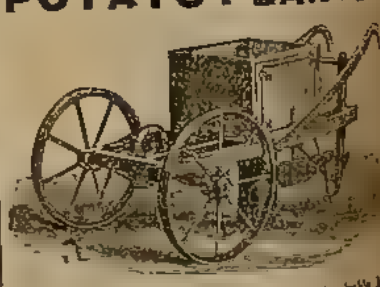
TRUE'S
IMPROVED
POTATO PLANTER,



This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.
It Saves the Labor of 10 Men in Planting Time.
Makes its own furrow, cuts the potato in such slices as the farmer may prefer; drops them regularly, and covers them perfectly, and does all this as fast as a horse can walk over ground that can be plowed.
No intelligent farmer can [illegible] that with the aid of a machine with which one man can, with the aid of a horse, plant six acres of potatos in a day, is of inestimable value—because the days in which PLANTING can properly be done are very few, while he has all SPRING and FALL in which to cultivate and dig.
This distinguishes the POTATO PLANTER from other machines. It affords its aid "in the very nick of time," and gives leisure to its owner for attention to his other spring work, which would otherwise be overwork him or be left undone.
The undersigned have the sale of this Great Labor Saving Implement for the Pacific Coast.
We shall also sell "County Rights" for this Implement, and a good Mechanic can make a fortune out of it.
Particulars and Catalogues can be had at our office.

THE LARGEST WINE STORE.

The increasing consumption of wine in the City of Paris demands the construction of another of those large public wine stores at the Depot of Bercy, one of the suburbs of Paris, which has at present a political fame. We extract from the official report of Mr. Jules Simon the following items.

The new store will be built between the Rue de Lyon, the Boulevard de la Rapée and the western bank of the river Seine, and will occupy an area of 262,000 meters. On 16,000 meters there will be a two story building and on 246,000 one story. The first will be constructed at the east side of the square, its front running along the Rail Road, while the upper story will be connected by viaducts. On account of a foreplace the two stories of 16 000 meters each, will offer a surface only of 29,000 meters, which added to 246,000 meters of the stores in the single-story building will give a total of 275,000 meters. The surface occupied actually by the wine trade, will not surpass 274,000 meters.

It is calculated that, on one meter of these there may be stored 5 hectoliters of wine. Leases are given for any time, up to nine years, at the option of the tenant, and the rent for one meter will be 3 frcs. per annum.

These public wine stores of Bercy represent the greatest wine market of the world, and are of an importance of which many of our readers may have no idea. We shall at another time speak more explicitly about the subject, and will only add for to-day the following figures.

In the Bercy wine stores there are interested 4,500 wine merchants, 22,000 retail Liquor dealers of Paris, 4,200 persons who use it only for storage, and 500,000 proprietors of vineyards.

The above brief sketch of the Wine Warehouses of Paris, will give our wine makers some idea of the wine trade of France.

The *Wine and Fruit Reporter* of New York says: We shall not omit to mention another jewel in the eyes of all adorers and connoisseurs of the noble grape juice, which we have received in the course of last week.

The Allemannia brought us, via Hamburg, a splendid lot of the genuine Tokay, two different grades, which Mr. Fr. Stanisics, at his last sojourn in the Hungarian vineyards has personally selected, and which we take pleasure to recommend to all who know how to appreciate the glorious product.

A Taste of the Inquisition.

Three English ladies have been expelled from Rome under singular circumstances. They received a visit from three gens d'armes and a police agent in private clothes, who made a thorough search of their lodgings. Two days afterwards they received orders to quit Rome in twenty-four hours. The British Consul used all his influence, and the Pope himself was appealed to, but all in vain. At the expiration of forty-eight hours, a respite of twenty-four hours having been obtained two of the ladies left Rome and went to Naples. The other has resolved not to leave until actually expelled. A rumor that the ladies had been engaged in distributing unauthorized Italian Bibles is emphatically contradicted. No reason whatever for the expulsion appears to have been given. It is thought that the order proceeded from the Pope himself.

Silver Change

If reports from Canada are correct, it can not be long before the American fractional currency will be fully replaced by coin among us. Ever since silver disappeared in the United States, it has flowed into Canada in abundance. The Canadian government has received it at a discount, although recently it has been at par in trade. But lately there has been a *united* movement to receive American silver coin at four per cent. discount. It is said that for a few weeks past the shipments of American silver from Montreal alone have averaged $50,000 per day.

Agriculture, like the leader of Israel, strikes the rock—the waters flow, and the famished people are satisfied.

ADVERTISING PAYS.

Many business men, or men in trade, often say advertising "don't pay." We copy a few brief words from some of the largest advertisers in the United States. These words are a refutation to those who say "advertising don't pay"—

"Without advertising I should be a poor man to-day."—[H. T. Helmbold.

"My success is owing to my liberality in advertising."—[Bonner.

"Advertising has furnished me with competence."—Amos Lawrence.

"I advertised my productions and made money."—[Nicholas Longworth.

"Constant and persistent advertising is a sure episode to wealth."—Stephen Girard.

"He who invest one dollar in business should invest one dollar in advertising."—[A. T. Stewart.

"P. T Barnum, the noted exhibitor, ascribes his success in accumulating a million of dollars in few years to the unlimited use of printer's ink."

"A man who is liberal in advertising is liberal in trade, and such a man succeeds, while his neighbor, with just as good goods, fails and drops out of market."—Horace Greeley.

33 11 ROCHESTER, N. Y.

CRANBERRY PLANTS,
GRAFTING WAX,
OIL PACKING PAPER

CRANBERRY PLANTS by Mail, 50 cts. per 100—$4 00 per 1,000—postage paid. The kinds best adapted for Cultivation are—Early Black Bell, Large Mottled Bell, Round and Oblong Cherry. For moist land—Bugle. Early and Large; the best of all is the Mansfield Creeper Habit differs from the other varieties; Fruit very large; great runners and bearers; best adapted with the Bell variety for Upland Culture.

For Description, Mode of Cultivation etc., enclose stamp for Circular, or 25 cts. for "Cranberry Culturist."

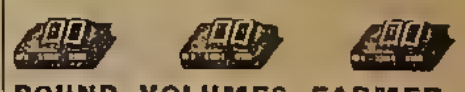
Grafting Wax

Of Superior Quality, in Small Packages for use.

OIL PACKING PAPER,

For Mailing and Packing Plants; a heavier article for covering Hot-beds, Manufactured and for Sale by

F. TROWBRIDGE,
33-8. Milford Conn.



BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $6 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Provost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and toss cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
Farmer Office.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed:

Fresh Cranberry Plants

(The Large Bell Variety.)

Ramie Seed, Fresh,

WATERMELON. CANTELOUPE,

AND

MUSKMELLON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

MIXED LAWN-GRASS, ETC.

For sale at the "FARMER" OFFICE.

ITALIAN CHESTNUTS.

WE have received an Invoice of Italian Chestnuts in Very Superior order fresh and in the best condition for planting.

We have them put up in Packages of ONE DOLLAR each, MAILED free to purchasers.

WARREN & Co., FARMER OFFICE,
320 Clay Street

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING JUNE, 23., 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to *our Journal*, to which we would direct their *special* attention.]

We ask our readers who are interested in agriculture to read with care the two valuable letters in our columns this week on our fourth page.

The letters from Antioch and from Gilroy came from men of influence and practical ability. We know what they say to be not only literally true, but true scientifically in regard to the cultivation of the earth and of crops. We refer our readers to our editoral this week on the same theme.

Old 49ers will find a very interesting letter from our correspondent "Philmore" who has been "Walking Round" among the by-gone streets and places in our city *repainting* the *scenes* of those eventful days. His letter will call up strange memories. Read the letter—we shall have more of them

Farmers will find Horace Greeley's Essay, talks about *feeding the land*. He is right.

Farmer's Wives and Daughters will find matters of interest and great moment in our Home Department this week.

Our European Letter presents some very interesting matters for Poultry growers especially.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

We are indebted to W. Holly, Esq., of Chicago, for copies of the "Pacific Glee Book" and the "Bugle Call," published at Chicago by Root & Cady. These books contain a very interesting series of Happy Songs, for which the donor has our grateful thanks.

CHERRIES RIPE, LUSCIOUS CHERRIES.

We found a liberal sized box of this delicious fruit in our Editorial room from the Alhambra Gardens at Martinez of Dr. Stressel, for which the Dr. has our gratitude. The Doctor's medicine always cures.

WINE, NEW WINE.

We acknowledge from Messrs. Landsberger & Co. samples of their New Sparkling Muscatel Wine—rich in fragrance, brilliant in color, and sparkling and bright. May it be emblematic of the prosperity of these fortunate wine manufacturers.

GYPSUM.

We have received pamphlets setting forth the value of this grand fertilizer. Our readers know how we appreciate it. Copies of this pamphlet can be had at our office free.

PEACH CULTURE.

We have received from Messrs. Orange, Judd & Co., Publishers, a work by James A. Fulton on the Peach, its Origin, Culture, and all appertaining to it. This is a valuable book for our Nurserymen as it gives all needed information about the peach.

AGRICULTURAL COLLEGE REPORTS.

We are desirous of procuring from the several AGRICULTURAL COLLEGES of our country a list of all their officers, the Professors, Teachers and Reports of their condition and progress, and we shall be greatly indebted to the Secretaries of these institutions if they will aid us in collecting a history of their *Rise and Progress*. We will cheerfully reciprocate the favor in any way in our power.

INSURANCE.

No one should rest until their property is fully covered by Insurance in a solid company. The Dry Season is upon us—and danger all around us. See Pacific Insurance Companies Report—Insure there for safety.

SAN FRANCISCO OPPOSES THE SUBSIDY.

"Dutch Flat" over again, and the city of San Francisco records her vote as against Rail Road Enterprises. Yet, nevertheless, a simple "million of dollars" will not stop the enterprise, for the Southern Railroad *will be built*, and those who so unwisely oppose it on the score of *Chinese Labor*, have taken the surest possible method to prevent that *very million of dollars* from being paid to *white labor*.

How strangely, unfortunate, and ignorant must be those *working men* who speak, act, and rail against the very men who hold the purse that would open to give them employment if they were consistent and just.

The very acts of these men, by having the vote recorded *against the subsidy*, have taken the certain step to close the avenue of labor against themselves, for if 2 and 2 make 4, then as surely will the Directors of this Southern Railroad be certain to exclude these very men from all employment, and give the work to the Chinese, for their interest will lead them to do so, as they can employ them at half price and more rapidly build the road, and when these laborers shall see themselves cut off from employment they will have no one to blame but themselves for being made the *fool* of designing politicians who have only used them and their votes to bring themselves into notice, which otherwise they could never have attained.

We deeply regret this vote, for it is discreditable to have such a record go abroad, and we regret it for the *laborer's sake*, for they will be the loosers by being thus unwise.

FARMERS LETTERS.

We are most happy to lay before our readers the excellent letter of W. R Olden Esq., from Anaheim, and also the valuable letter of J. R Browne Esq., of Gilroy. These Gentlemen both write from the stand point of truth, they speak of things as they are and also tell what they should be. We are inexpressibly glad to receive the letters from such men; these writers both know of what they write, and we are glad to find that such men utter the same sentiments upon shallow plowing, and irrigation that this Journal has been pleading for years.

We hope our Farmers will perose these letters faithfully, and above all, that they will join these gentlemen and others, and let *our* Journal hear from each and all often. If our Farmers will adopt Mr. Oldens suggestion and write for our Journal, we can do each and all, and the cause great good.

We are aware, and we presume Mr. Olden is, how very hard it is for Farmers to sit down and write after the labors of the day. But if they will only be so kind as to spare a brief time now and then and *talk* to us a little, the example of a few letters will soon bring us many, by calling out a valuable discussion.

The FARMER as Mr. Olden says, is the medium for such letters, we have endeavored to be faithful for nearly seventeen years, and we now feel that we can ask for the kind and generous co-operation of Farmers in this work. We therefore, in the spirit of that letter call upon them and bid welcome to our colums, and we will make their words and thoughts like good seed, which shall bless the land.

FARMERS LET US HEAR FROM YOU.

GREAT FAIRS IN WESTERN STATES;

We say *Western* States, because that is understood as speaking from New York or Boston—while California is *the Great Western State*.

Our readers and all those who are interested in wool growing or Goat's fleece, with those who are in the Silk interest, and our Woolen Mills can have an opportunity to show the products of our State, at the *Two* great Exhibitions, which are announced in our columns, and to which we call the special attention, as very particularly worthy their notice, and we trust California will be fully represented both by the *Products*, and by those business *men* who are identified with these interests.

We wish such men as DONALD MCLELLAN, Esq., Woolen Manufacturer; Flint, Bixby & Co., our largest Sheep raisers; our raisers of Cashmere Goats, our Sericulturists, Wm. Blanding, Esq. Hoag, Haynie, and others will attend with specimens of their products. At least if they cannot all personally go, by all means let there be a good delegation and a full representation of our products.

The letter of Secretary Holly in our columns of the Indiana Exhibition explains the object. Mr. Holly is now with us, and will give all the information needed, he can be found at the Cosmopolitan Hotel.

All samples for Exhibition will be sent free and sold if desired for Exhibitors. By the letter of Mr. H. we are invited to aid this exhibition. Most cheerfully we will do so, and those who cannot attend and desire their samples to go forward. If they will forward them to us at our OFFICE, 320 CLAY ST., we will see them sent forward duly and free of cost and take much pleasure in doing so to aid the Industries of our State.

We also call attention to the Great Exposition of the same products announced in our columns. Circulars of all the details of which have been sent to us, and from which we can and cheerfully advise all who desire to exhibit at these Fairs.

SANTA CLARA COLLEGE.

This most excellent Institute closes its present session on the 14th of this month, but the annual Exhibition will not take place till the 9th of Aug., when it will be in the new and magnificent College Hall which is rapidly approaching completion.—On that occasion there will undoubtedly be one of the largest audiences ever convened, and one of the best Exhibitions ever made by this popular College.

Our citizens will find it a most interesting season to visit this beautiful Valley.

FOR TRAVELLERS.

Now is the season for Tourists and travellers generally. Business men combine business with pleasure, and make their tour of business collections subserve a double purpose—that of collecting and making sales—and also by taking their families with them, and gaining a respite from care, turning aside from their business routine.—And visiting with their families the most noted places worthy a visit, and an examination. By this plan hundreds of our citizens are now absent from our city at the Yosemite, the Big Trees, the Geysers, Calistoga, Pescadero, Alamaden Mines, and many other places worthy special notice, and attention of all tourists.

THE YOSEMITE VALLEY.

There is no spot like the Yosemite Valley for natural, yet wonderful beauty, a beauty that thrills as it inspires, the true lovers of, nature as they pass beneath those towering rocks, hears the roar of the mighty Cataract as it comes rushing down shaking the very mountain with its power, or turns to see the sunlight making rainbows in the Bridal Veil, or passes beneath the north and south Dome, whose round summits are nearly a mile above his head. Amid these scenes the true disciple of nature will truly feel that here HE WALKS WITH GOD. The Yosemite Valley is the Grand Visitation scene for the Tourist.

THE BIG TREES.

The Forest at Mariposa, contains the largest number of trees, and the largest trees. It is a grand forest, and should be visited by all travellers as one of the wonders of the world.

The Calaveras Forest is also a group of wonderful trees. Beneath the branches of either of these mighty forests the traveller feels the littleness of frail, mortal man, and looks up to the branches of these "Fathers of the Forest," and hears the wind singing their anthems of praise to their Great Creator.

These are the scenes that make men better for having seen and enjoyed them.

THE BUTTES.

Among other noted places, we can also note these wonderful upheavals upon the plains of Shasta, and those of Yuba also. These lofty peaks are indeed—for their wild and strange hights—specially worthy a visit from all tourists who would learn of all the wonders of our wonderful State.

These Buttes possess a vast field for a tourists study and investigation, rising as they do from out broad plains, undoubtedly a volcanic upheaval, they are full of wild and wondrous beauty and should not be neglected by travellers.

We have stood upon the lofty peaks of the Yuba Buttes, where in a clear day the stretch of view extends nearly 300 miles in a direct line—Sacramento over, can be seen from these high peaks.

We have visited Yosemite several times, the Mariposa and the Calaveras group of Big Trees, and other wonderful spots in this State. But we often recall the vision we had from the Yuba Buttes, as one of those scenes of grandeur and beauty, which can never be forgotten, but remain in the chamber of memory forever.

MONTE DIABLO.

How few of our citizens realize the grandeur of the view from this lofty Mountain, its height is 3,850 feet, and from its summit Professor Whitney says an area of 40,000 square miles is brought within the scope of vision. A larger and grander view than can be had from any mountain in the known world.

Monte Diablo, is but little spoken of as a place of visitation, but we trust strangers from abroad, Europeans and our citizens from the old states, now with us, and those that shall come to us, will not fail to embrace in their list of places worthy of note the lofty peak of Monte Diablo.

CALISTOGA SPRINGS.

No traveller should fail of a visit to Calistoga, there is much to be seen and much to be enjoyed. Great credit belongs to S. Brannan Esq., for the extensive improvements made there. The Boiling Springs are one of the most wonderful curiosites in our State.

The most extensive and agreeable accomodations for the traveller have been made at Calistoga.

THE GEYSERS.

This is one place where natures beautiful and wonderful works are shown forth. There the mysteries of Natures Cauldrons are at work; go by all means and witness this curious display, and the beautiful scenery around this wild place.

OUR MANUFACTORIES.

Visitors from abroad should by all means visit all our manufactories, so that they can attest to their friends in the eastern states and Europe, that we are indeed a live state on the subject of Manufactures. That they have by ocular demonstration proved we are rapidly progressing beyond, and more surely than even our own citizens would credit.

To this end they should by all means visit the Shot Tower, and the Lead Pipe Manufactury of Messrs Selby & Co., our worthy Mayor. The Rope Walks of Messrs Tubbs & Co., the Linseed Oil and Lead works of that company. The Wire works of Messrs Hallidie & Co., (President of the Mechanics Institute,) the famous Carriage Manufactores in our city. The Glass Works, and many other important and very interesting places—all showing the real wealth of our State, and at all these places the proprietors will cheerfully and courteously render all needed information. These all show the real wealth of our State.

OUR WOOLEN MILLS.

Strangers from abroad should be sure to make a visit to the Mission Woolen Mills, and also the Pioneer Woolen Mills, and see the goods manufactured here. This will give them information they can obtain in no other way. The Knitting and Weaving Department, also of Hosiery and Underclothing will be found of great interest. At each and all these places the proprietors will be pleased to show to strangers from abroad their goods, which we say, cannot be excelled in any part of the world.

WOOL SORTING AND PACKING.

This is another Department our Boston merchants and all persons from abroad should visit. The Packing Warehouse of McLennan & Griser, on Broadway, near Battery, and that of Perkins & Flint on Battery, near the Docks. Both of these places will show samples of wool that cannot be surpassed in any part of our country.

PLACES OF RECREATION AND REST.

By a change of subjects of interest, the mind is rested and refreshed, and to this end a visit should be made to Woodwards Gardens, one of the pleasantest and most instructive spots around our city. Here is nature in all her varied works, from the wild Bear, "*Ursa*," the Emblem of our State, (not Camille Ursa,) but the genuine Grizzly, with the Lion and Leopard, and all others to a large extent, thence to man—and here one meets all kinds. But the little children, the rich flowers, the Birds, the Paintings, Coins, Old Books; these will all repay for the visit well. And there are other places of lesser magnitude of display—but scenes of beauty can be had of our own beautiful Bay and Harbor, with its shipping from all quarters of the world, by a visit to Russian Hill, or to Telegraph Hill, and then a change.

THE OCEAN, SEA LIONS, ETC.

A ride now to the Cliff House, and see the *Lions* and hear them roar. Look out upon the broad ocean and see the stately Ship as she comes over the bounding sea, nearing her destination to enter the Golden Gate, the Harbor of San Francisco; that is indeed the great Entrepot of the worlds Commerce. Here on this beach is food for the mind.

> But give to me that sublime roar,
> Of the "Breakers" on the pebbly shore
> There listen, when the crested wave
> Leaps high o'er oft the sailors grave,
> And as these billowy surges roll,
> Drink in, sweet music for the soul.

THE TURKISH BATHS.

There is *one place* that all our Eastern and European visitors must not fail to visit and enjoy; not only as a place worth *seeing*, but worth *enjoying*. It is also specially worthy of notice as one of the most perfectly complete and luxurious Bath Houses in the United States, and all travellers need thus refreshing, so that they may, by a reinvigorated body, have a clearer mind for all the pleasurable scenes which our city and State will afford them.

THE ROMAN AND TURKISH BATHS of Dr. Zelle, on Pacific street, near Montgomery street, have been fitted up in the most perfect style, having reference to purification and a restorative of strength and health, and every one who wishes these great blessings will be sure to receive them, should be sure to go and enjoy these Baths. We believe we do a *public service* by making their value known.

RAIL ROAD AND STEAMER BAGGAGE.

We beleive we shall do our Travellers another favor if we point out to them one of the greatest conveniences that has yet been offered to them.

We allude to the establishing of a Trunk and Package Express Company, which will recive the Trunks and Packages of all travellers at our Steamers and Railway stations and deliver them quickly and safely at the Hotels or Houses, and at moderate charges.

The "California Package Express Co.," whose Headquarters is at 313 Montgomery St., having good Teams and reliable Men, will take orders and do this business in a reliable manner—better than all the old methods yet invented.

THE CONCERT.

The third and closing Concert given at Platt's Hall last evening by Miss Adelaide Phillips was indeed a crowning success, and a grand evidence that *superior merit* will always be appreciated here.

Miss Phillips sang with the true artist's spirit, and won great applause and repeated encomiums. Miss Phillips will always be a favorite. The cornet playing of Mr. Levy is very hard to describe. We have frequently heard the expression, "All in a Horn" and never fully understood its full import till now. Mr. Levy indeed has it *All in a Horn*, for never before was such music breathed forth from that instrument. We have often wondered at the magic power of "Ned Kendall's Bugle," but he has gone with his music to play sweeter strains—but of Mr. Levy it is only necessary to say he has no superior living.

Miss Phillips having charmed all by her sweet music, goes to Sacramento next week. Her friends here will gladly welcome her back again, and to a grand assembly of listeners to her melody.

Mr. Evans performed very finely on the Piano and led the orchestra in a master spirit. The orchestral performance was most excellent—really complete.

THE HARPOON HAY FORK.

The famous HARPOON HAY FORK, long advertised by us, and which has been so highly approved wherever used the present year should now receive attention.

Having sold them to prominent Hay Makers in San Jose and at other places, we now append a RECOMMENDATION from one of our PIONEER FARMERS whose certificate is a sure guarantee of the excellence of the Fork:

COL. WARREN—DEAR SIR:

THAT HARPOON HAY FORK that I purchased of you, I have tested only in unloading hay at the barn. For that purpose no tined fork can possibly equal it. It is astonishing with what ease and rapidity it can be worked, and sending it through doors and windows, that the common Horse Fork make no pretentions to enter.

Respectfully, JNO. M. HORNER.

ATLANTIC AND PACIFIC UNITED.

THE END CROWNS THE WORK.

We have been favored with the last number of the *Trans Continental*, the pretty Journal which was published on the cars during the splendid passage of the PULLMAN CARS with the BOSTON BOARD OF TRADE, whose present visit to our city has created so much excitement.

From this Journal of passage we take the following very happy sketch, as one that should be preserved with this copy and other memorials received on board these gorgeous cars as they stood on Market street. We have memorials and reminiscences that we shall not soon forget.

The issue of this, the last, number of the *Trans-Continental*, indicate that the constant success attending us has enabled us after our wonderful ride—so long in distance, now seemingly so short in time—to descend to-day to the waters of the Pacific. And this daily record of our progress can hardly end more appropriately than with a retrospective sketch of what we, as travelers, have accomplished,—as that was promised, or that could have been reasonably expected, and indeed far more. Almost as if in one long and rapid vision, have disappeared behind us the Capital of the Old Bay State; the green hills of Berkshire; the spires of Albany; the broad fields of Canada; the rich farms of Michigan; the marvellous trade and lofty edifices of Chicago; the beautiful prairies of Illinois; the vast plains along the Platte; the strange, disintegrating forms of the earlier world by the Green River in Wyoming; the stupendous walls of the Weber Canyon; the mountain-walled valley of the latter day Saint, and the grandeur and richness of the Humboldt region. We have traversed the lands that witnessed the labors and triumphs of the Pereira, the perseverance of the Dutch; the adventure of the French; and that now, filled with the forms of representatives of nearly every civilized race, are demonstrating the energy and progress of the great composite American people. We can unhesitatingly and most assuredly feel that the factors which we have found recorded on the vast continental page, renders our highest praise of American skill and American resources, not only not boastfulness, however once seemingly such—but simple and adequate expression of reality. And while rapidly, safely, luxuriously, happily, we have crossed from sea to sea, we can all, with fervent gratitude, regarding what we have seen and what we have felt, exclaim with honest love and pride—Thank God we are Americans! and look and resolve anew that we each and all may, at our own appropriate time and manner, worship fully the vast land and the noble principles it represents committed to our keeping. With these feelings WE SALUTE CALIFORNIA.

Early this morning, as we ascended the Sierras we encountered quite a snow storm, a new feature in our trip. In Summit Valley forty-two feet of snow has falling during a winter, and eighty has been known to fall in a single storm. In crossing these mountains we pass thirteen tunnels cut through granite rock—the longest 1,600 feet—and through about thirty miles of snow sheds timbered as heavily as a line-of-battle ship. "Cape Horn," and the view down the American River Valley, added a majestic climax, full of grandeur and beauty, and after rising 7,000 feet and descending 7,000 feet we shall reach Sacramento, the capital of California.

We have passed thirty saw mills in these mountains, with abundant water power, within a distance of twenty five miles. The frequent wood stations on the entire western portion of the Central Pacific Railway, indicate a large local business, which must constantly increase.

At Dutch Flat the Gold Run we passed in view of hydraulic mining sluices, being frequently on the very sides of our road, through a rich mining district.

Yesterday being Soldiers' Memorial Day, it was thought proper that we who, from our present situation, were not permitted to place flowers upon the graves of the departed braves, must revive their deeds and revive the memory of their patriotism. A meeting was therefore held in the "Marquette," which was well filled by ladies and gentlemen. The Rev. E. G. Porter offered prayer. The national hymn was sung, and appropriate remarks were made by Col. Marsh and the Rev. S. C. Waterston. The meeting closed with singing.

PUBLISHER'S EDITORIAL SLIPS.

A most convenient way of obliging the "Editorial Fraternity" and aiding them with "copy" without marking, cutting or destroying valuable magazines or periodicals, was sometime ago adopted by the "Harper's," the "Atlantic Monthly," "Leslie's," and other Eastern Publishers, by preparing proof sheets of the select matter which would be likely to be copied and then sending them to such journals as would advantage by them by republication.

It was an excellent thought, originating with the "Harpers." We are glad it has been more generally adopted, and is now practiced by our "Overland" with us, which will lead to many more extracts.

A number of young ladies of Hartford are under the surgeon's care for distortion of the feet supposed to be caused by wearing high heeled shoes.

A young lady being asked by a rich old bachelor, "If not yourself, who would you rather be?" replied sweetly and modestly, "Yours truly."

CINCINNATI
Industrial Exposition.

Board of Trade.
A. T. Goshorn, Josiah Kirby, H. A. V. Post. W. H. Blymyer, D. B. Pierson.

The Board of Managers of the Cincinnati Industrial Exposition take pleasure in announcing that an Exhibition of Manufactures, Products and Arts, will be opened in Cincinnati, commencing Wednesday, September 21, 1870.

On behalf of the Chamber of Commerce, the Board of Trade, and the Ohio Mechanics' Institute, under whose joint auspices the Exposition will be held, we cordially invite Manufacturers, Mechanics, Agents, Inventors, and others, to contribute specimens of their skill, ingenuity, and taste to this Grand Exposition, and make it a true index of civilization.

It is the earnest desire of the Managers to make this Exposition of Art and Industry superior, in point of attraction and practical benefit to all concerned, to any display of a similar nature which has ever been held in this country. We therefore call upon all who are interested in the success, prosperity, and continued improvement of our domestic industry, to cooperate in an united effort to make this Exposition a grand success.

It seems almost unnecessary to present any arguments to show the great advantages of these periodical Expositions; all are alike interested in their success and maintainance; and the experience of past Exhibitions in all parts of the world, furnishes the most conclusive evidence of their great value as a stimulus to Art and Mechanism; They may be regarded as a direct incentive to emulation on the part of every artisan and producer, which will invariably be followed by a corresponding increase in prosperity; and in view of which we confidently anticipate a generous response and a hearty co-operation from all.

In order to give accommodations which will be commensurate with the demands that will assuredly be made upon us, we will erect a commodious Exhibition Building, upon a scale far exceeding anything of the kind yet erected for a similar purpose.

Steam power will be provided, that Machinery of all kinds may be seen in actual operation, displaying the advantages and capabilities of various machines under one view, and thus testing the invention or workmanship of the various machines in the most perfect and interesting manner.

Exhibitors from different sections will find Cincinnati the most favorable location in the West. Our noble River, and the different Railroads that radiate from the city in all directions, afford ample facilities for the transportation of articles.

We again, therefore, invite them to use this Exposition as a valuable means of introducing their productions, assuring them that they will here find a generous competition and an appreciating public.

The Exhibition is not intended to be in the least degree exclusive as regards the character of the articles to be exhibited. We hope to see Art and Mechanism fully represented in all its various branches; also, the products of the Soil and the Mines. And we also trust that the Ladies will grace our Exhibition, not only with their presence, but also with an appropriate display of their handiwork. A Committee of Ladies, auxiliary to the Exhibition Committee, will be appointed in due time, who will take especial charge of such handiwork and see to its proper arrangement for exhibition, and also to the appointment of judges in this Department.

The most ample arrangements will be made with the various Railroads, Steamboats, and other lines, to transport visitors and articles intended for the Exposition at the most favorable rates, full particulars of which will shortly be published.

In conducting the Exposition, the Board of Managers pledge themselves to exert the utmost diligence and care to satisfy both depositors and visitors.

The Premiums and Awards will be of the most ample character, both in number and quality.

It is very desirable that all parties intending to contribute to this Exposition, should give early notice of articles, amount and kind of space required.

Any information will be promptly given by addressing the "Secretary of the Cincinnati Industrial Exposition," who will furnish the Rules and Regulations, and also blank Applications for Space.

CHAS. F. WILSTACH, Pres't.

Abner L. Frazer, Sec'y.

N. B.—The Rules and Regulations for this Grand Exhibition, can be seen and explained, and all needed information had at the California Farmer Office.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the Value of our Agricultural Interests.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

EDITOR FARMER

GREAT EXPOSITION OF TEXTILE FABRICS

Cosmopolitan Hotel,
San Francisco, Cal., June 7, 1870.

Col. Warren:

Dear Sir—I desire to call attention through your columns to the "Third Exposition of Textile Fabrics of the Woolen Manufacturers Association of the West and South," to be held at Indianapolis, Ind., August 2d and 3d:

The management of the Association wish to secure a full and complete representation of the wools, sheep and goat—silk and flax produced on the Pacific Slope, and of the goods manufactured from these staples. The Committee of Arrangements will defray all the expenses of transportation of goods and samples to the place of exhibition, and for those who wish their property sold a Trade Sale has been provided. Two Expositions have been held by the Association which have proved successful, at the last, held in Cincinnati, a few specimens of California wools and California made goods excited marked attention, and it is hoped that the "Pacific Slope Department" at the forthcoming Exposition may be full and complete. The State of California especially so magnificent in its resources, can have no better opportunity to reach the people, with the evidences of their true condition, so as to induce emigrants to come here, thereby placing specimens of the products and manufactures of the State at Indianapolis on this occasion.

Knowing the deep interest you take in the development of the resources of the Pacific Slope, in addition to giving this space, I beg leave to ask you to give the collection of textele staples your personal attention.

I am very truly,
W. Holly,
Corresponding Sec'y Woolen Manufacturers Association of the West and South.

Domestic Economy.

Extravagent parents must expect to have extravagant children, and when masters and mistresses do not economize, they can scarcely expect the servants to do so.

Six Months of 50 Cents. Six Months for 50 Cents

Farmer's and Stock Breeder's Attention!

OVER 200 PAGES
OF
Reading Matter for 50 Cents,
THE
AMERICAN STOCK JOURNAL.

A large and Handsome Illustrated Monthly, containing 32 to 40 large Double Column Pages, filled with *Original* matter from the *ablest* writers in the country, on the various subjects connected with Farming, Stock Breeding, Wool Growing, Dairying, Poultry Keeping, &c., &c. "HOADLEY" "RUSSELL!"

HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 42 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS
With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

FOR SALE BY OWNER OF PATENT AND MANUFACTURER.

WOODS Improved Prize Mower—Folding Bar: As now made, this is the best and Cheapest MOWER used on the Pacific Coast.
KIRBY SELF RAKE REAPER, is unsurpassable in its work.

3 PROPRIETOR

Durability---Simplicity---Light Draft!!
THE WORLD MOWER AND REAPER!!!
The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.
Importers of Hardware, Agricultural Implements, and Miners Tools.

32-12, GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

"KISS PAPA GOOD-NIGHT."

Rosy cheeks on snowy pillows
  Gently, gently pressed;
Little hands all day so busy,
  Folded to their rest;
All the mother's heart stirs in me,
  At the peaceful sight,
While their last words I remember,
  "Kiss papa good-night."

Tender white arms softly clinging
  In a sweet embrace;
Curls, and smiles, and dimples rippling
  O'er each baby face;
All their little fears and sorrows
  Are forgotten quite;
And I wait with their fond message,
  "Kiss papa good-night."

Touch them lightly, very lightly,
  O ye coming years;
Bring them all your smiles and gladness,
  Save them from your tears.
Praying thus, I sit beside them,
  In the waning light,
Waiting with their tender message,
  "Kiss papa good-night."

Brooklyn Union.

ANN HATHAWAY.

[These rythmatic puns are attributed to Shakspeare, and were originally addressed "To the Idol of my Eye and Delight of my Heart."]

Would ye be taught, ye feathered throng,
With love's sweet notes to grace your song,
To pierce the heart with thrilling lay,
Listen to mine, Ann Hathaway!
She hath a way to sing so clear,
Phœbus might wondering stop to hear.
To melt the sad, make blithe the gay,
And nature charm, Ann hath a way;
  She hath a way;
  Ann Hath a way;
To breathe delight, Ann hath a way.

When Envy's breath and rancorous tooth
Do soil and blite fair worth and truth,
And merit to distress betray,
To sooth the heart Ann hath a way.
She hath a way to chase despair—
To heal all grief, to cure all care,
Turn foulest night to fairest day,
Thou know'st, fond heart, Ann hath a way;
  She hath a way,
  Ann Hathaway;
To make grief bliss, Ann hath a way.

Talk not of gems, the orient list,
The diamond, topaz, amethyst,
The emerald mild, the ruby gay,
Talk of my gem, Ann Hathaway.
She hath a way, with her right eye,
Their various lustre to defy—
The jewels she, and the foil they,
So sweet to look Ann Hathaway;
  She hath a way,
  Ann Hathaway;
To shame bright gems, Ann hath a way.

But were it to my fancy given,
To rate her charms, I'd call them heaven;
For though a mortal made of clay,
Angels must love Ann Hathaway;
She hath a way so to control,
To rapture the imprisoned soul,
And sweetest heaven on earth display,
That to be heaven Ann hath a way;
  She hath a way,
  Ann Hathaway;
To be heaven's self Ann hath a way!

GETTING MARRIED.

A GIRL'S EXPLANATION OF THE DIFFICULTIES.

A great deal is said and written now-a-days of the reasons why young men are afraid to marry. The most frequent of these is, that the girls of this generation are too extravagant.

That we are extravagant I admit. But who makes us so? Did it ever occur to you that this outlay in dress is to please you? Is not the girl who makes a fine show, the most sought after? Of course there are exceptions—girls who do not care most of all for dress, and men who, in their admiration of ladies, look at something beyond this. But, after all, it is not the most common remark—"Is she not stylish?" What a fine appearance that girl makes;" and so it pleases their vanity to be the escort of such attractive ones.

For myself I dress rather plainly. Perhaps I could better afford to put on this style than many who assume it. But my taste does not so lead me; and then, too, knowing the sins which the love of dress will drive women to, I try in my humble way to set a better example.

Besides, I want my gentlemen friends to feel that one girl, and, if they will but see it, hundreds besides, do no care for dress for themselves. Ambitious parents desire, and short-sighted young men admire, and so often they appear frivolous, when really their thoughts are far beyond. And let me tell you how I am tried sometimes. To save the expense of a carriage for the opera, I don my lace bonnet and walking suit. Now, my friend sits beside me, and should be thinking: "This is a sensible girl. She comes to hear the music. I can afford to bring her several times for what a carriage would cost once for these butterfly women."

Ah, no, he does not look so far as this; but, whether he means the comparison or not, calls my attention to the most gaily attired ladies, saying admiringly, "How becoming that lady is dressed." "What an elegant costume Miss——— wears." I do not say to him what I am telling you; but I feel it all, and am almost resolved, the next time he invites me—if he does it again—to go to all this extravagance.

But so much show in a public place does not suit my taste, and then I do not wish to be one to frighten my friends from the holiest and best of earthly relations, the married life.

One thing more. We often hear young men say, "All that a girl wants is money; if a man has not that he may pass on." Very true of some girls; but is not the reverse as often true? These showy girls, whose parents spend their all to marry them off, are taken; while the true parents who wish their daughters to be chosen for their real worth, and conceal the possession of wealth, find for them a poor market.

I feel this subject keenly myself, for I have lost a valued friend. "Died?" No; that were not so hard. But he has gone; and in his first look I saw a resolve to bury the love which he dare not speak. A few hints thrown out convinced me that he felt his business would not warrant the luxury of a wife. And so he will go on in the loneliness of hotel life, while his heart yearns for the comforts and joys of home.

Oh! if I could have told him that he is more to me than gold; and that with his love I should be happy without much that a generous father now lavishes upon me. But he; he is proud, his wife must not work. She must be a lady, dress and be gay; and until he can afford this he will steel his heart against love.

Oh, friends, brothers, will you not think of this. Do not expect to commence life as your fathers leaves off. Only choose a wife with tastes congenial to your own; a happy spirit; prudent for the things of this life, and yet with aspirations beyond. Be willing to give up your own extravagances; and be proud of her not for "the outward adorning of putting on apparel, but for the ornament of a meek and quiet spirit." be not ashamed to be called poor. Care not for the world's opinion, but only for her whom your heart loves. And so the blessings of wife and children shall be yours and in the atmosphere of home your own character shall expand into all that is good, and pure, and noble.—*New York Independent.*

LADIES AND BABIES.

The everlasting beauties of all ages and all climes are three: the smile of a child, the song of the birds, and the brightness of flowers. But in a few days the flowers fade; in a single summer the birds cease to sing; but there is a loveliness in the face of childhood which survives the summer time, and extends through the long years, numbering a score, and then care or sickness, or depravity, or all of them, make lines, and creases, and crow-feet, to deepen, and lengthen, and widen, and waste the body, and shrivel up the heart; and sorrow, and grief, and disappointment wind up the sad history.

But I have seen as smooth a brow on eighty's face, and as sweet a smile, and as merry a twinkle of the eye, as ever lighted up the countenance of babe or youth. This is rare; it ought to be oftener, it would be always if we lived aright as to body and soul; and to bring this about, we must first begin with the body, before it is born—begin with the soul before it has a mundane existence.

A good step has been taken in this direction, and as was proper and right, a woman was in the case, by the name and title Mrs. Doctor Anne Dinsmore, in the establishment of a Ladies' Physiological and Sanitary Institute, to disseminate among women valuable physiological truths.

We call Boston in derision the Hub of the universe. But from that same Boston the glorious New England emanations come, modes of thought are developed, and practicalities are originated, which shoot out, and widen, and deepen, and make their everlasting impress upon the whole American mind. Boston, in more than one or two things has framed thoughts which have revolutionized the nation, which will shape the mind of the world.

In the case in hand Boston originated the idea a third of a century ago, and a society was formed in 1848, of which Mrs. W. R. Mayo was president, but it was organized amid the fierce opposition of the leading professions, and yet to-day it numbers over four hundred members. Such societies ought to be organized and to work in every part of the country, until every woman can be made to understand and to feel that its her duty to educate herself to all the duties of motherhood, and that these duties legitimately begin on the marriage day, when the soul-character of the future child begins to be molded, and when foundations can be laid which shall give vigor of body, strength of mind, and purity of heart, to mold the destinies of the unborn for time and for eternity. It is a most momentous subject whether a child shall be born mis-shaped in body, feeble in mind, depraved in heart; to live a life of sickness, and crime, and misery; or to be a healthful, happy, holy being; and to be young in heart and body and mind at fourscore, depends more than we are aware of on the parents themselves, upon their thoughts, and feelings, and habits of life, during "The first year of marriage," a pregnant theme for a book. To know how to begin married life well, to know, and see, and feel what an influence it has over the individuals themselves, to last to life's latest hour, to make it a voyage of sunshine or storm to the bridal pair, and of happiness or misery to those who may be born of them, these are questions upon which the society named at the head of this article has a most natural, direct, and practical bearing, and we heartily wish it and all like it a grand success.—*Hall's Journal of Health.*

Politeness is like an air-cushion—there may be nothing in it, but it eases jolts wonderfully.

THE FIRST REQUISITE.

It is a rare compliment to pay to any woman to say she is an excellent housekeeper. Solomon gives us in the last chapter of Proverbs the description of such a housekeeper, and the spirit of it is one that holds good in all ages.

The very first requisite of such a house mother, is that "she looketh well to the ways of her household and eateth not the bread of idleness." No house can thrive that is left all to the management of domestics.

"She that would thrive most prosperously, herself must every corner see." It is these little wastes that eat up the largest incomes, and one can see where the money goes. As soon as a housekeeper detects a leak in the ship, let her set to work to stop it. Make a point to save in that one thing, and she will have gone a long ways towards establishing a habit. Carefulness in one thing will lead to a similar prudence in others.—It will help to open one's eyes to what was once wasted. If, when the meat comes in, care is taken to cut off every particle of superfluous fat before it goes into the pot or oven, and then at once place this fat in a dripping-pan, with a little water in it, and also set it in the oven to try out the fat a valuable basin of drippings can be saved, and always had in readiness, which will be a great saving in the matter of butter and lard. The meat, too, will be greatly improved by having this fat take off before it is cooked. This one item would make dollars of difference in the expenditure of many families, if it were properly attended to.

A good housekeeper must be accomplished in the many little table arts, which go far towards making home attractive. A French cook can contrive a bountiful dinner out of the scraps of cold meat on a joint, a dish of stale bread, an egg or two, and a sixpence worth of vegetables. I have known many a thriftless woman throw as much into the swill barrel—women whose husbands worked hard to bring in the home supplies.

No wasteful woman, whether in high or low life, can be a good housekeeper—nor one that does not see to the ways of her house—however many helpers she may have to carry out her plans.—[*Corr. Country Gentleman.*

FLIES, OR BEES—WHICH?

I see a young man lounging about home, eating at his father's table, and housing his lazy head under the parental roof, when he ought to be at work earning manhood for himself, and I say, "He is only a grocery store fly, living on the sweetened products of another's toil—a consumer of fruits which he did not help to produce.

I see a lackadaisical young girl, who rises late, sighs away in languor her morning hours, betimes comes forth from an airing glittering with fashion's trappings, not one of which she has either earned or made—content to deck herself in that beauty which has been bought by the toil and care of other brains, and adjusted by the hands of hired skill, and we exclaim again, "Only the green and glitter of the thievish fly!"

And morally the community swarms with these flies which gather about the bad spots of life. They find sweet satisfaction in alighting upon the scandals, the abuses, the criminalities, the sore places of society, and we cry out, "Flies again!"

Now, while we cannot turn a grocery store fly into a bee, we do hold that it is quite possible to transform the *fly* character into the *bee* character.

Young and old may gather honey at every flight. Go into the library, and look at those volumes nodding towards you laden with beauty and hidden riches; draw them out by an industrious and meditating habit, and store us the results in the hive of memory. Go into society; stop buzzing out your own conceit; where you talk a minute, listen and think an hour, and you shall find every being you approach laden with honey for your profit. Go into the work and worry of the business world; stop that buzzing which heralds your own plans, and your own clatterings of unmeditated advice, suck down deep and touch those deep deposits which lie far within the surface success; draw our those secrets of the reticent, slow-talking giants of triumphs along the avennes of business, and you shall come back heavy-laden.—*New York Ledger.*

A BALL AT THE TUILERIES.

The *Gaulois* gives the following list of refreshments and beverages consumed at every ball in the Tuileries:

900 bottles Champagne, 400 do Bordeaux, 50, do Madeira, 1200 quarts of different syrup, 200 do iced coffee, 200 do of hot chocolate, 2000 do ice cream, 1200 do of punch, 200 do of tea, 3000 pieces of different kinds of cakes, 100 do large pies and pastry, 600 kilogrammes of meat, 100 large pâtés de foie gras, 200 chickens, 50 pheasants, 100 patridges, 12 large hams, 300 small birds 24 dishes of fish, 12 large dishes of jelly, 24 do of salad of vegetables, 16 do of Truffles, 20 beef tenderloins, 3000 small loafs of bread.

And all this in an hour or so.

Does that not remind one of the Lucullus dinner parties of the old Roman Empire?

A HAPPY BOY.

"I say, boy, why do you whistle so gaily?"

"Because I'm so happy, mister."

"What makes you so happy?"

"'Cause I've got a new shirt; look-a-here; ain't it nice?"

"It don't look very new. What is it made of?"

"Why, 'tis now, 'cause mam made it yesterday out of dad's old 'un!"

"And what was dad's old 'un made of?"

"Why, one of granny's old sheets, what her marm give her."

The merit of our actions consists not in doing extraordinary actions, but in doing ordinary actions well.

New Advertisements.

NEW

AGRICULTURAL

BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

Russian, Turkish & Roman

BATH HOUSE,

No 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense has been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded in the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31-3

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORILLA, which was exhibited ALIVE in Paris, has been added to the already vast collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5, and 7 to 9 P. M. Sundays from

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, or any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men.*

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making Scrap Books, and now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish, just the *right material for Scrap Books*, for we have in the collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we can offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

Miscellany.

A VISIT TO A CHINESE SILK FACTORY.

I directed my guide to take me into the silk-weaving streets. We soon entered them. I at once dismounted and made a careful observation of their *modus operandi* for the production of this renowned fabric of Oriental looms. All around me was silk, silk, nothing but silk. In small dark houses, little better than hovels, were seen people, chiefly women, dying this delicate textile. Outside, in little filthy yards and pig-styes, over the ground where the family swine were wallowing, were placed bamboo poles, whereon were hanging skeins of colored silk, just from the dye, and glowing with the most vivid hues, as they hung for drying in the sunshine over the loathsome pools below. I visited several of their weaving shops. They were quite similar to their dyeries and arrangements. I spent some time in examining one of the largest. It was, perhaps, one hundred feet long, and about sixteen feet wide. The walls were of coarse clay blocks, sundried, replaced by a single aperture for air or light, save at the front, which was entirely open the whole breadth of the building. The floor was simply of trodden clay, uneven and untidy. An aisle ran down the centre, just wide enough for one person to pass; on either side of this were ranged the several looms, and standing as close together as they could be placed.

Two or three persons were employed on the work of each loom. The looms are plain, common-looking affairs, almost precisely of the same kind as to appearance and mode of manipulation as were those upon which our grandmothers in Ohio used to weave the linsey-woolsey for the wear of us Western boys, when even the preacher was almost a stranger to broadcloth. Squatting myself down by one of these friendly-looking acquaintances of my boyhood, I leisurely watched the delicate and diligent manipulations of the weaver and his assistants, as their shuttles flew to and fro in the many mystery of figures and flowers that came gradually out larger and plainer upon the glowing surface of the gorgeous fabric which those skillful workmen were there creating under my eye. So complex were the movements of the men on these simple-looking machines, and so marvelously beautiful were the products resulting therefrom, that I gazed with unbounded amazement upon this work of silk-weaving as it progressed before me.

The weather being warm, and the shop crowded, the workmen were almost naked. My visit interested them manifestly, yet not a loom ceased its clicking, clacking noise, not a man left his employment to gaze; but I detected them giving furtive glances and exchanging mutual smiles among themselves at the curious stranger who had thus unceremoniously squatted himself down in their midst, by one of these humble-looking looms, on a common dirt floor, within homely clay walls, where, nevertheless, are produced those magnificent fabrics which for ages, and throughout the world, having been the pride of wealth, the envy of beauty, and the admiration and desire of loyalty. Far down, and nearly to the extreme limits of this long room, with a plain board counter, extending quite across the room. Behind it stood the proprietor of the factory, a smooth-faced, richly-clad Chinaman. Directly over him the building was unroofed, thereby affording a spacious sky-light; except this, window there was none. Through this sky-light, and down upon the counter below, the sunshine fell upon the finished work of this dingy, dirty, squalid-looking workshop. The proprietor was busy measuring off and packing up the products of his looms.

And, as the sunlight streamed full upon the gorgeous colors of those magnificent silks, satins, and brocades, which the proprietor was tossing about in billowy radiance, it seemed to my eyes as I stood far up in the feeble light of the centre of the room, as though he were tossing and toying with rainbows. From places so humble, and surroundings so squalid as this, came those royal fabrics which are to decorate palaces, and to adorn the persons of Princes and Monarchs of the earth."

IDLERS IN CALIFORNIA.

In proportion to its population, California contains a greater number of persons who make a living in a suspicious or openly dishonest way than any State in the Union. We include in the above list gamblers, thieves, "gentlemen" idlers, general city adventurers, who never work, but who sponge on their acquaintances by borrowing, or who pick up a precarious living from lunch-tables; politicians out of office, who take every opportunity of making speeches on the labor question, and who trade off their supposed influence with the working classes to the highest (and he need not be a very high) bidder. If these and other similar classes could be brought together, we would have a terrible army of leeches who prey upon the workers of the State. If they were all put to work, and if they earned but one dollar per day, the State would be annually enriched fifteen to twenty millions of dollars. It is certain that they sponge or steal much more than that amount each year from the producers. One of the most unpleasant features of idleness on this coast is the fact that young men are even more inclined to it than old ones. They have pet names for the various efforts they make to sneak and steal a living, around which they attempt to throw an air of good fellowship. The evil of idleness would be seriously crippled here, if industrious persons would steadily set their faces against giving money (under the pretended form of loans) to sponges. If St. Paul's injunction were obeyed in California, that he who will not work ought not to be allowed to eat, thousands in the State would go to bed with empty stomachs, and there would soon be a decided stirring-up among our chronic vampires.—*Carters Real Estate Circular.*

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum;

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre-emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give expree notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by EDITOR FARMER.]

SAN FRANCISCO, June 9.

The Harvest Season is now with us, the Golden Grain is now fast falling before the sharp rapid flying teeth of the stately Mower or Header, and the full sacks of plump grain, can be seen in many a field, soon to be changed by our hard working Farmers for the golden coin, for which all mankind, (and womankind too,) so much covet.

Woodland, Yolo County, leads off this year with the first new wheat, 200 sacks coming to market to-day, being three days earlier than any crop for the last seven years. This wheat was a sample of 5000 sacks of medium quality, yet clean and good—$1,75 was refused, $1,85 being demanded.

We could fain hope that our Farmers will be wise this year. They only will be wise who having fair prices offered, accept and sell, for if they will read the reports from the grain growing region of the old states, & of all Europe they will find that the crops are good everywhere abroad and we know they are good here also.

We ask our Farmers to read carefully the letters we publish from Gilroy and from Anaheim as to the cause of "failure of crops."

Our wheat crop now promises well, and in despite of what they may say, we *guess*, we are confident the crop will be very large and will surprize all, by its quantity It will be larger than last year and will be better in quality.

The Barley, Corn, Oats, and Hay crops (this last cured well) will all be large and excellent, all promise good results.

Our Farmers should note that although the price of wheat has very materially advanced in Europe there is none going forward, why is this, are not those Telegraphic rates real?

Farmers, reflect! a good price at harvest is a certain thing, "a bird in the hand is worth two in the bush."

Retail Prices in the Vegetable Market.

We continue to notice better and better samples of Vegetables, Beets, Carrots, Parsneps and Salsify, show a better system of culture by their long tapering form and fine shape—this indicates deep and fine culture, where the roots are divided, or made blunt, or break off into various forms, it indicates shallow and coarse cultivation.

The market stands, show every needed luxury in the Vegetable line. Visitors from the East say they never saw such a display. Most of our Market *Garden Sass* is grown by foreigners, who by close and steady application, make the business pay well.

MEATS.

The solid meats are abundant, and prices of each and all much reduced within the last three months.—The market is rather overstocked with cattle and sheep while calves bring a good price.

Retail prices of meats vary but little—the display at our stalls is very good.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER"

—o—

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser forsixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

SEND US SAMPLES.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

NATURAL HISTORY.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent to the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and when they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for the Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED, COTTON SEED, COFFEE SEED, TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			5 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

EUROPEAN.

From our Special Correspondent.

PARIS, May 21, 1870.

DISEASE OF SWINE, SHEEP, AND COWS.

Relative to the fact communicated in my last, of a herd of hogs having become delirious from feeding on green Buckwheat, some German Agriculturists and Chemists, think the cause must be found in insects which attack the plant, and add that the effect produced is not uncommon, it affects sheep as well as hogs, but strange, only those of a white color. Stupor, inflammation of the head, accompanied by pimples as large as peas, constituting the diagnosis of the malady.

Several Continental Agriculturists have observed that when sheep are transported by railway, from one kingdom to another, they exhibit symptoms of the scab. Some importers insist upon the wagons being washed with chloride of lime before putting the animals therein. When the disease appears, an almost perfect cure is effected by washing the sheep from head to foot—well rubbing in—with a wash composed of two parts of green soap and one of the flower of sulphur.

Aphthous fever, or thrush, has of late been very prevalent in France and Germany. The French "Vet," had been very successful in treating this very contagious, but not fatal malady, by washing the blisters when they appear at the mouth, or elsewhere, morning and evening, with a mixture of 3 ounces of phenic, or carbolic acid, in a quart of water, and disinfecting the shed with benzine. These gentlemen have also stated as their opinion that there is no danger in using the milk of cows so affected, or of consuming their flesh.

WAR OF AUTHORITIES.

Germany is at last at war with France. The celebrated French Agricultural Chemist, Georges Ville, claims to have been the discoverer of the mineral theory, which the Germans attribute, and fairly so, to Liebeg. Ville's theory is, that the plant only wants four substances—nitrogen, phosphoric acid, potash and lime—that these minerals exist abundantly in nature, and can be prepared like a prescription—farm yard manure etc., being useless. Liebeg says, give to the soil what has been taken from it, Ville, apply exactly what the plant wants. The latter's theory has long ago been tried in Saxony, and since many years abandoned. The soil wants in addition, elements to react, as well as to nourish. The most general method in Germany for the employment of supplemental agents—is to daily sprinkle them over the manure heap—it is thus that salt, and superphosphate, are "dredged." In China, the soil receives faithfully back, what it has parted with, and in Saxony and Nassau, not to speak of other German districts, the produce of the soil has been doubled within the last fifteen years, by observing the practice of the Celestials, and the rational principles of Liebeg.

ARABS FOOD FOR HORSES.

The Arabs cultivate a shrub called "Carroubier," which the colonists find to be valuable adjunct in the feeding of horses and mules—five pounds of it with four of barley being the feed. The plant only flourishes in very strong soil and a dry climate. A shrub 20 feet high will cover a space 30 feet in diameter, and yield some 30 pounds of fruit. It is coming into use in France for finishing off the stock—many preferring it to barley.

In the allotment system of cultivation around the cities of France, the spade is nearly unknown—a mattock with a very short handle, being the instrument employed. In the case of potatoe planting, the manure being previously grubbed in, a circular trench is made and the seed sprouted in advance, deposited—as the plant grows, the earth is raked into the stem.

LABOR, ETC., ETC.

The average wages per day for a French Agricultural labor is 2½ francs—and the hours of effective work, ten. In June he toils 16 hours daily—less two for meals, the other months being in proportion. Sunday is paid for specially—four, being equal to two, week days.

Eastern Correspondence.

EMIGRANT INQUIRIES.

——, Ill, June 9th, 1870.

Warren & Co.:

Sirs—Find $1 00 for which send its worth of reading matter that will give us the best information of California. If you could send a map of California, showing the position of the towns and counties, it would be the best adapted to our wants, as we propose imigrating thither soon. Would you please send report of lumber market, also give us some idea of the value of city and village property—as we now live at Palatine, a thriving village, numbering about one thousand inhabitance, twenty-six miles Northwest of Chicago. We have a pretty place in a good situation, three-quarters of an acre of land, trees, shrubbery, &c. House contains three rooms above, six below. Our price for said place is sixteen hundred dollars. How does this compare with California property. Are there situations favorable for a mechanic? Would keeping private boarding-house be profitable? Is not the climate of the Southern part of California preferable to the Northern. Hoping to receive an answer soon.

I subscribe myself your friend,

* * *

P. S. Please state the wages which different mechanics receive, also the price of board,

* * *

[REPLY.]

[This is the style of many Letters daily received from various States, and our time will not allow us to go into detail, nor our purse give us means to send other than paper maps. We cheerfully send lots of papers—these will give the desired information.—ED. F.]

PROFITS OF CULTIVATION OF THE FOOTHILLS.

We clip the following from the *Carter's Real Estate Circular*, and ask our readers to note how the facts here stated agree with what has been published in the FARMER relative to the foothills and their value eight or ten years ago:

Since the *Circular* was first issued we have repeatedly taken occasion to call attention to the value of land in the foothills. Two or three years ago land there was displaced, but now it is known that the cultivation of grapes, fruit and wine in the foothills pays much better than grain growing in the valleys. Ten years hence the most prosperous tillers of the soil in this State will be those who own vineyards and orchards in the foothills of the Sierra Nevada. There are thousands of acres of Government lands there which are open to pre-emption, and the Central Pacific Railroad Company has plenty more near the railroad line, which it is offering at low prices on easy terms. Despite these now well-known facts, hundreds of lazy fellows hang around San Francisco and whine for work, which they will not leave the enticements of the city to get. On the subject of the profits of cultivation in the foothills, a Placer county paper cites the case of a person who resides near Auburn. He has a vineyard and orchard of peaches, apples and pears, covering seven acres of ground, the soil of which most people would think too poor to justify the belief that it would produce grapes. The gross proceeds of his crop last year from the seven acres amounted to $2,100; cost of cultivation, picking and marketing, $250; net proceeds, $1,850. This is no exaggeration of the capacity of the foothills in Placer, or perhaps in the State. It has been generally believed that the want of water on the high lands or hills was a bar to the successful cultivation of the grape; but experience has proven that the grape will grow to the greatest perfection on hill tops and sides without irrigation, and that proper cultivation, by plowing and keeping the ground stirred is far better than irrigation, and produces a better yield and better quality. We give here some figures furnished by Mr. Reese of the average product of his vines, ascertained by actual weighing: Common Los Angeles, per vine, 30 pounds; White Syrian, 60; Muscat, 60; Malaga, 60; Black Zinfindell, 60; Eight hundred of these vines may be planted on an acre of ground, and estimating thirty pounds to the vine, at the age of five years—at one cent a pound—the product would be the almost incredible sum of $240 per acre. Does any one doubt that lands capable of producing so much are worth $2 50 per acre, or that they will not soon be in demand?

AMERICAN INSTITUTE FARMERS' CLUB.

We copy a portion of the interesting debates held at the Farmers' Club of the American Institute, New York, recently. Our farmers will find matters of interest for them on various subjects.

As we have no Institute Farmer's Club in California, if our farmers will send us their communications we will establish a Farmer's Column in the FARMER, where every week they can discuss these matters, and thus draw out answers from others.

SPARE THE BIRDS.

Geo. J. Knight, of New York, forwarded some observations on the same phase of the subject, expressing the opinion that our feathered friends doubtless save and leave more and better fruit than we could get where they destroyed. He continued:

"I would say to all farmers, plant a few white mulberry trees for the birds, as well as for the chickens and the children. The trees are hardy, grow fast, and bear abundantly. I will give you my experience. During the *morus multicaulis* speculation I planted a lot of them. They soon became worthless. I saved some white mulberries near the carriage-house and granary. About the same time I planted a cherry orchard and a variety of plum-trees. They all flourished finely, and soon had fruit in great abundance. The mulberries were ripe about the same time with the cherries, and continued ripening until late in the Autumn. The birds were delighted with the white sweet fruit, and left the cherries untouched. Chickens and children loved them. My beautiful grove of forest trees surrounding my house was vocal with the feathered songsters. I would not allow any gun to be discharged near the house or grove. The birds became very tame—sometimes sit on the banisters of my piazza and sing cheerily and merrily within a few feet of me. Their tameness was pleasant to see—none to make them afraid. In process of time my mulberry trees interfered with my buildings, and I was forced, reluctantly, to cut them away. Soon my cherries became knotty, wormy, imperfect, and but few on the trees. The cherry trees and many of the plums evinced signs of decay; large, black balls or knots on the limbs of old and young trees. They are nearly all dead now, and very few birds to be found in the neighborhood. No cherries, no berries. This I believe to be the result of cutting away those splendid mulberries. I never saw an apple tree borer in my forty-five-year-old apple orchard until just before I sold my farm, four years ago, and after the mulberries were destroyed."

BOILING CATTLE—GREEN FOOD.

J. H. Curtis sent a communication which the Chair said contained more pages than it took to describe the creation of the world. He gave his experience as to raising of sweet corn for soiling. He spoke in praise of the remarks made on this subject at a previous session by F. D. Curtis, and gave some confirmatory items:

"Two years since I sowed one acre. The pasture began to dry up, and we never had such a drouth in this section, and about this time I began to feed the corn to my cows. It continued very dry until Winter, so much so that there was scarcely a green thing to be found in the pastures. My neighbor's cows that had no sowed corn to eat, were almost starving, and nearly dried up, while mine gave a good mess of milk and improved in flesh. There were several men of good judgment who estimated that one acre of sowed corn as being worth $75; and I am confident it was worth all of that to me. I would, therefore, say ist every dairyman, if the prospects are fair for a good season and plenty of feed, sow a good field of corn; it will not come amiss, and if the prospects are that we are likely to get a very dry season, sow double the quantity—at least one acre to every ten cows; for it is certainly the dairyman's antidote for short pastures, short crops of hay, and short pockets. The ground should be well manured if it is not already very rich. I generally sow as early as the 1st of June. If it is a dry season it is much better to sow early, so that the corn will get well started and shade the ground, and it will then stand quite a hard drouth. I always sow the large Western corn, as it will yield nearly double the quantity of feed that the smaller varieties will. If sowed broadcast, it requires from three to four bushels per acre; and if sowed with a drill, about half as much. I prefer sowing with a drill, for the reason that it takes so much less seed. A bushel and a half of seed will sow an acre in drills, from twelve to fifteen inches apart, and three inches in the rows. It is not much more that half the work to cut it than when sowed broadcast. There is no better crop to seed with than sowed corn. Some of the best meadows that I have got were seeded down with it; but perhaps it is not to be recommended, as it might interfere with the growth of the corn, but I think not much. I always feed it at night when I feed but once a day, as I can get the cows to eat so much extra after filling themselves pretty well in the pasture through the day, and always feed in the stalls, and then each cow can get what belongs to her. I see that some correspondents have had trouble in getting cows to eat it, but I have fed it several years, and never had a cow to refuse to eat it, and I never heard of such a thing before; and I think there is no crop that we raise here in Chautauqua tha pays as well, considering the expense of raising it, as sowed corn."

CATTLE DISEASE—FOOD, &c.

D. Harrington wants a remedy for "Red Murrain" on his cows.

A. B. CRANDALL—Lewis F. Allen, in his work on American cattle, states that purgative medicines are the best remedies, and he recommends a mixture, consisting of castor oil, six ounce; nitre, one ounce; Epsom salts four ounces, whey, or thin gruel, one quart. If this does not prove effectual, a drink may be administered, made of two ounces oil of turpentine, one ounce of alum, dissolved, and one ounce of terra japonica. Harris Lewis advises sulphur and salt, and another writer states that an experienced farmer gave half a pint of the juice of the white-blossomed nettle with excellent effect.

C. F. Peck of Ellsworth, Conn., desired to be informed if steaming hay for dairy cows will pay. Will steaming good hay increase the flow of milk?

J. B. LYMAN—I have heard a number of able discussions on this subject, and have asked many large dairymen the results of their experience. Good, sweet, early-cut upland meadow hay is as near being perfect cow food as anything you can get, and steaming makes it no better. But in feeding, all coarse, late-cut, dead-ripe grasses, and for straw and stalks, the testimony of hundreds of farmers is all one way—that it makes two tons go as far as three untreated.

SPARE THE CROWS.

L. A. Thomas of Dubuque, Iowa, would know "of what crimes and misdemeanors is the crow guilty, that he should be excluded from the provisions of a law protecting other birds? In the Spring plowing time, did those who object to them ever notice the great number of crows engaged among the fresh-turned furrows picking up something; and, when disturbed in one part of the field, flying off to another? What are they doing there? I once killed a crow thus engaged, just to find out what he was doing, and his craw was full of cutworms. The young crow is a most voracious eater. He will gulp down a good-sized lizard, frog or mouse, or any number of grubs, cutworms and caterpillars and instantly clamor for more. Thus he will continue to clamor and eat, and eat and clamor all the day long, and during the entire period of his young crowhood. Even in the night he will still clamor for food after having been gorged all the day. It is safe to estimate that the two parent birds will each make a trip for food once in four minutes; their joint arrivals being once in two minutes, each bearing upon an average, a half-dozen of these insects and vermin, which will make 180 per hour, or 2,858 in sixteen hours—about the length of time the crow works. I have seen a pair of crows destroy a caterpillar's nest of at least a thousand grubs in less than an hour. The crow and the blackbird are almost the only birds that will destroy the common caterpillar—the pest of the groves and the orchards—and yet they are more universally hated and execrated than all other birds, the hawk not excepted. I could never understand the reason for this universal hatred."

M. C Crapsey of Lockport, N. Y., stated that if you desire to benefit wheat, sow in the Autumn, soon after the seed is put in; if for clover, in the Spring, before the Spring rains are over, or else your plaster will fail to ward off the effects of the drouth. Plaster sown in dry time might as well or better be kept in the store-house, as it can in no possible manner assist the plant unless sown while the atmosphere is charged with moisture. This is my experience for fifty years, and has never failed once.

FORTUNE TO A WORTHY MAN.

Many of our readers will remember John C. Fall, one of the pioneers of Marysville, who is said to have been the first one to pitch a tent or build a house on the site now covered by our beautiful city, and who was at one time one of our prominent merchants. We are informed that he is now the sole owner of the Arizona mine in Humboldt, Nev., and that he is making a very satisfactory showing, financially. Last year he took out about $500,000, and expects to take out at least $1,000,000 the present year. He has from fifty to sixty men employed. How few of the old pioneers can make such a showing.

[We take the above from the Marysville *Appeal*, and rejoice to record the fact of Mr. Fall's good fortune. He deserves it, for he was ever liberal and ready to help the deserving. Fortune did frown on him and he suffered—now she smiles upon him, and we rejoice.

The rapid advance in former years of Marysville was chiefly indebted to the great energy of Mr. Fall.—ED F.]

WOMAN AS AN EARTH-DIGGER.

BY WEB FOOT, ESQ.

The best strain of blood known to flow through human veins, is that denominated the Anglo-Saxon, or what John Sands declared should be denominated the Anglo-Celt. The proof lies in what it has done. Blood tells in man, as in animals; and the Anglo-Saxon quality has proved its worth on a thousand battle-fields, physical and moral. England has been for centuries the best illustration of enlightened civilization, and has a character in this respect to lose which no other nation has. Whatever of like character the United States has to boast, can be fairly traced to the

MOTHERS.

It is a pity that for the want of proper attention, this current should grow less vigorous. Yet it is becoming so. It is becoming deficient in those elements which have hitherto given it world-wide renown. Can anything be done to renew it, revive it, give back to it its old fervor and force? I think there can. A plan for doing it is to improve the women, in whose veins this strain rests. I suggests this plan, because I believe that the females of the human family have more to do directly with the improvement or deterioration of offspring, than have the males.

It is a sad fact that the Anglo-Saxon women give evident signs of loss of power, or exhaustion of the peculiar constituent elements that made up the original stain of blood. They are fast coming to one of two conditions; inability to bear children, or ability to give birth only to children who are deficient in organic and vital force. It is said that the children born in New England, with perhaps the exception of the State of Maine, since the year 1835, are, as a whole, one or two sizes smaller, physically, when grown to full statures than were the generations which preceded them. The chief cause of this change is to be found in the want of care of the women by the men, as well as by themselves. Not the want of kid-glove attention nor of little petty regards, nor of respect in the way of gratifying whims, caprices, and weaknesses; but want of that care which gives vigor of body and magnetic power of the brain, whereby offsprings would be endowed with endurance and largeness of growth. Scarcely a woman, only now and then a man, knows how to relate a female human being to her material existence so as to increase her power to give birth to children who should be models of health, strength and beauty. Thousands of men know how to raise fine cattle, horse, sheep, swine, and fowls, who are as ignorant as idiots of the way to become the fathers of fine, beautiful formed children.

Of all the means which can be used to give strength, tone, power, and intrinsic force to the physical organization of the human being, working the soil is the best. It is better than mechanics; better than gymnastics; better than travel, though it be on foot; better than riding on horseback, or going to sea, or drinking the waters of medicinal springs. True, women are to be found in great numbers who are so sick as not to be able to dig the earth. These must avail themselves of other forms of labor in the open air. But where no special disease exists, but only want of constitutional force, of muscular power, as is the case with many women and grown up girls in this country, digging in the earth is the eminent remedy. However weak and ineffectual their first efforts might be, time and steady application would do wonders for them. Their bones would become solid, muscles wiry, tendons elastic, skin clear, blood flowing freely from center to extremity, brain vigorous, thoughts practical, habits simple, moral sense acute. Their capacities would be greatly enhanced, and should they have children, the probabilities that they would be healthy, great and good when they arrive at adult age, would be greatly increased.

Let every father who values his name and fame see to it that his daughters, as well as his sons, work the soil. Let every young woman who wishes to become worthy of her origin, of the country which gave her birth, of the age in which she lives, seek to secure the right and the freedom to work land.—*The Laws of Life.*

MECHANICS INSTITUTE.

We have been favored with the address of A. S. Hallidie Esq., President of the Mechanics Institute delivered before that Association, June 2d. This address contains many important and valuable facts and statistics, and presents many important matters which it will be well for the members of that association to consider. Mr. Hallidie's address is a very valuable one, from which we shall soon take the opportunity to select subjects for our readers.

Having seen it reported that there will be a Mechanics Fair this Fall, we take this opportunity to say—there will be no Mechanics Fair in 1870—the great effort will be, to have an Exhibition in 1871 that shall surpass all others greatly, and make it if possible a National One.

Agriculture.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWENTY-TWO.

INSECTS—BIRDS.

If I were to estimate the average loss per annum of the Farmers of this country from Insects at $100,000 000 per annum, I should doubtless be far below the mark. The loss of Fruit alone by the devastations of insects, within a radius of fifty miles from this City, must amount in value to Millions. In my neighborhood, the Peach once flourished, but flourishes no more, and Cherries have been all but annihilated. Apples were till lately our most profitable and perhaps our most important product; but the worms take half our average crop and sadly damage what they do not utterly destroy. Plums we have ceased to grow or expect; our Pears are generally stung and often blighted; even the Currant has at last its fruit destroying worm. We must fight our paltry adversaries more efficiently, or allow them to drive us wholly from the field.

Now, I have no doubt that our best allies in this inglorious warfare are the Birds. They would save us, if we did not destroy them. The British plowman turning his sod with a myriad of crows, blackbirds, etc., chasing his steps and all but getting under his feet in their eager quest of grubs bugs, etc., is a spectacle, to be devoutly thankful for Whenever clouds of birds shall habitually darken our fields in May and (less notably) throughout the Summer months, we may reasonably hope to grow fair crops of our favorite Fruits from year to year, and realize that we owe them to the constant, and zealous, though not quite disinterested efforts of our friends, the Birds.

But I do not regard the ravages of Insects as entirely due to the reckless destruction and consequent scarcity of our Birds. I hold that their multiplication and their devastations are largely incited by the degeneracy of our plants caused by the badness of our culture. On this point, consider a statement made to me, some fifteen or twenty years ago, by the late Gov. Wm. F. Packer of Pennsylvania:

"I know (said Gov. P.) the narrow valley of a stream that runs into the west branch of the Susquehanna, which was cleared of the primitive forest some forty or fifty years since, and has ever since been alternately in tillage and grass. A road ran through the middle of it, dividing it into two narrow fields. A few years ago, this road was abandoned, and the whole of this little valley, including the road-way, thrown into a single field which was thereupon sown to wheat. At harvest time this remarkable phenomenon was presented: A good crop of sound grain on the strip four or five rods wide formerly covered by the road; while nearly every berry on either side of it was destroyed by the weevil or midge."

Now I do not infer from this fact that insect ravages are wholly due to our abuse and exhaustion of the soil. I presume that Wheat and other crops would be devastated by insects if there were no slovenly, niggard, exhausting tillage. But I do firmly hold that at least half our losses by insects would be precluded if our fields were habitually kept in better heart by deep culture, liberal fertilizing, and a judicious rotation of crops. I heard little of insect ravages in wheat) fields of Western New York throughout the first thirty years of this century; but, when crop after crop of Wheat had been taken from the same fields until they had been well nigh exhausted of their Wheat forming elements, we began to hear of the desolation wrought by insects; and those ravages increased in magnitude until Wheat culture had to be abandoned for years. I believe that we should have heard little of insects had Wheat been grown on those fields but one year in three since their redemption from the primal forest.

But, whatever might once have been, the Philistines are upon us. We are doomed, for at least a generation, to wage a relentless war against insects multiplied beyond reason by neglect and short coming of our predecessors. We are in like condition with the inhabitants of the British Isles a thousand years ago, whose forefathers had so long endured and so unskillfully resisted invasion and spoliation by the Northmen that they had come to be regarded as the sea kings' natural prey. For generations, it has been customary hereabout to slaughter without remorse the birds, and let caterpillars, worms, grasshoppers, etc., multiply and ravage unresisted. We must pay for past errors by present loss and years of extra effort. And, precisely because the task is so arduous, we ought to loose no time in addressing ourselves to its execution.

The first step to be taken is very simple. Let every Farmer who realizes the importance and beneficence of Birds, teach his own children and hirelings that, except the Hawk, they are to be spared, protected, kindly treated, and (when necessary) fed. They are to be valued and cherished as the voluntary police of our fields and gardens, constantly employed in fighting our battles against our ruthless foes. The boy who robs a bird's nest is robbing the Farmer of a part of his crops. He who traverses a farm shooting and mangling its feathered sentinels diminishes its future product of Grain and nearly destroys that of Fruit. The Farmer might as well consent that any strolling ruffian should shoot his Horse or his Cattle as his Birds. Begin at home to make this truth felt and respected, and it will be the easier to impress it also on your neighbors.

Next, there should be neighborhood or township associations for the protection of insect eating birds. We must not merely agree to let them live—we must cherish and protect them. I believe that very simple cups or bowls of cast iron, having each a hole in its center of a suitable size, that need not cost sixpence each, and could be fastened to the side of a tree with one nail lightly driven, would in time be adopted by many birds as nesting strongholds, whence they might laugh to scorn their predacious enemies. If every harmless bird could build its nest among us in a place where its eggs would be safe from hawks, crows, cats, boys, and other robbers, the number of such birds would quickly be doubled and soon quadrubled.

And we must summon the law to our aid.—Though law can do little or nothing against stealthy, skulking nest plunderers, it can help us materially in our warfare with the cowardly vagabonds who traverse our fields with musket or rifle blazing away at every unsuspecting robin or thrush that they can discover. Make it trespass, punishable with fine and imprisonment, to shoot on another's land without his express permission, and the cowardly massacres of the Farmers' humble allies would be checked at once, and, when public sentiment had been properly enlightened, might, in civilized regions, be arrested altogether.

MECHANICS AND FARMERS.

Several of the most influential newspapers published in our large cities are advising mechanics and others to leave their "over crowded trades and occupations" and seek homes of independence and prosperity in the West. Workingmen are told that hard work and a determination to "rough it a little at first" are the only requisites to the obtaining of this most desired object. Such statements seem pleasant and plausible on paper, but in a majority of instances they will be found to be difficult to substantiate in practice.

In farming, as in all other pursuits, in order to be successful, it is necessary to possess an ordinary knowledge of it. This can not be gained in a day, a month, or a year; it requires at least two years of constant study and practice. Those who have no knowledge of farming would infer from the articles contained in some of our city newspapers that a mechanic has only to go to the West, purchase one hundred and sixty acres of public land, put up a log house, by a yoke of oxen, a cow, some pigs, and a few chickens, to be on the high road to health, wealth, and happiness. It is not our intention to discourage young men and others who have been brought up in cities, and who have no regular employment, from adopting the life of a Western farmer. Nor is it our desire to discourage those who think they love farming and feel that they can be successful at nothing else. All such ought to go West and earn a farm if they can.

In all cities there is a large class of men who have regular callings or trades, by which they are enabled to make a comfortable livelihood, but who are dissatisfied, and feel that they would like to change their employment. They do not know exactly what change they want, but they want a change of some sort or other. Many of them are advanced in years, have families depending upon them for support, and probably as the result of many years of toil and economy, have a few hundred dollars in a savings bank, or perhaps own a house and lot. It is upon the minds of this class of men that these flaming and exaggerated descriptions of Western farming have the greatest effect, and their influence often causes serious consequences. Many a well-to-do mechanic has gone to the West with sanguine hopes of success as a farmer, and has returned to his trade poor and penniless, and with perhaps a vacant chair around his fireside, caused by an unhealthy location in the Western climate. It is well ascertained that farming pays a lesser rate of interest on the money and labor invested than any other business. Search the history of those who have fine farms, and it will be found that a majority of them have been purchased by money made in some other business, or that they have been inherited from relatives of a previous generation. Henry Ward Beecher and Horace Greeley are strong advocates of the adoption of farming by city people, but it is well known that they expended hundreds and thousands of dollars before they made a cent by agriculture; and it is very questionable whether they would be the owners of fine farms to-day, if they had depended upon the profits of farming to acquire them.

Farming has its advantages, but they are usually on the side of those who have had long experience in its details. They alone are competent judges of the quality of land, whether it is poor or rich, and suitable for this or that crop. They alone can determine whether the price asked per acre is just, and what stock is profitable and what unprofitable—the healthy or unhealthiness of the chosen locality, and much other information which it takes time to acquire, and which it is necessary to have in order to carry the avocation of farming to a paying and successful termination can only be acquired by long experience. Before the mechanic or other city worker undertakes to go farming in the West, let him consider well his circumstances and prospects at home, and then, if after a careful consideration, he determines to venture for success on a farm in the West, let him do as Grant told Sheridan to do in the Shenandoah Valley, and as Sheridan *did* do—"Go in and win."—*The Technologist.*

Those persons who wish to give correct views of our State and its resources, a correct market report of all the products, should send the FARMER regularly to their friends.

DIME NOVELS.

A certain minister of the Methodist church has a son, who returned from school a few months since with a report of scholarship below the average.

"Well" said his father, "You've fallen behind this month, have you?"

"How did that happen?"

"Don't know, sir."

The father knew, if the son did not. He had observed a number of Dime Novels scattered about the house; but had not thought it worth his while to say anything until a fitting opportunity should offer itself. A basket of apples stood upon the floor. And he said: "Empty out those apples, and take the basket and bring it to me half full of chips."

Suspecting nothing the son obeyed.

"And now," he continued; "put those apples back into the basket."

When half of the apples were replaced the son said:

"Father, they roll off. I can't put in any more."

"Put 'em in, I tell you."

"But, father, I can't put them in."

"Put them in?" No, of course you can't put them in. Do you expect to fill a basket half full of chips and then fill it with apples? You said, you didn't know why you fell behind at school, and I will tell you. Your mind is like that basket. It will no thold more than so much. And here you've been, the past month, filling it up with 'cheap dirt—DIME NOVELS.

The boy turned on his heel, whistled and said, "whew! I see the point."

Not a Dime Novel has been seen in the house from that day to this.

SAVE THE BEES.

The following epitaph, taken from a German work, might properly be placed over every pit of brimstoned bees:

HERE RESTS,
Cut off from useful labor,
A Colony of
INDUSTRIOUS BEES,
BARBARLY MURDERED
By Its
UNGRATEFUL AND IGNORANT
OWNER.

Killing bees for their honey was, unquestionably, an invention of the dark ages, when the human family had lost—in Apiarian pursuits, as well as in other things—the skill of former ages.

In the times of Aristotle, Varro, Columella and Pliny, such a barbarous practice did not exist.—[*Langstroth on Honey Bee.*

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 21 2-100 per cent. For life-sustaining properties to all stock are—and to sudden changes of weather or over-driving] it is equal

For MILCH COWS particularly valuable, increasing the quantity of milk and giving its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the meal of bran, chops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($35 per ton,) it is the cheapest feed in market. It is now selling in New York at $49 per ton, gold, at $50 per ton in Boston, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

TRUE'S
IMPROVED
POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adopted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such sized slices as the farmer may prefer; drops those pieces in the most perfect regularity, and covers them perfectly and does all this as fast as a horse can walk over the ground that can be plowed

No intelligent farmer can [illegible] that as to the ease with which one man can, with the aid of a horse, plant six acres of potatos in a day, is of inestimable value because the days in which PLANTING can properly be done are very few, while he has all summer and FALL in which to cultivate and dig

This distinguishes the POTATO PLANTER from other machines. It affords its aid "in the very nick of time," and gives leisure to the owner for attention to his other spring work, which would otherwise be overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this Instrument, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at reception.

STRAWBERRIES.

ITS INSECT ENEMIES.

The insect enemies of the strawberry are few in number, but some of them are very malevolent and destructive. Chief among them I place the larva of the May beetle, or dor-bug, *Phyllophaga Quercus*, whose ravages are sometimes most disheartening. This, sometimes known as the white grub and sometimes incorrectly called by Farmers the potato worm, but not to be confounded with the true potato worm, which is the larva of a sphinx, is about an inch and a half long, three eighths of an inch in diameter, with a brownish-red head.—It is occasionally found in ordinary garden soil, and its presence is made known by the leaves of a strawberry vine wilting down, when on pulling it gently the whole plant comes up, the root being eaten completely off. But it abounds in old grass land and pastures.

Vines planted on such land recently ploughed will in one case out of a hundred thrive and do well, but the chances are, that every one will be killed by the white grub. I manured thoroughly and ploughed up last spring a little more than an acre of pasture land, and set out upon it about twenty thousand choice strawberry plants, a large percentage of them being of the President Wilder variety. The vines took root and began to grow, and some of them had begun to send out runners, when the grub attacked them, and made clean work of the whole field, devouring almost every plant. The field was kept clean by constant hoeing, and I attempted to dig out the grubs, as some of the vines were new and valuable; but I was obliged to abandon this plan as equally ineffectual and expensive.

It is always safer to raise one or two hoed crops on land intended for strawberries, as the May beetle seldom lays eggs in ploughed soil, choosing grass land where the larvæ will be protected from birds. These offensive grubs live chiefly upon grass roots, and in some places devour them so completely that if two parallel lines be cut in the turf, the sod between them may be rolled up like a carpet.

Where only a few grubs show signs of their presence in well established beds of strawberries, they must be at once dug out and killed. They can be found early in the morning, close under the plant they have ruined; but as it grows warmer they burrow down in the soil to a depth of eight or ten inches, so that an unsuccessful search is frequently made for them by those who do not know their habits. Skunks are very fond of white grubs, and dig them out and eat them with avidity.

There is another white grub, resembling this one, but of a lighter color, and somewhat bluish shade, found usually under old manure heaps. It is the larva of a dung beetle,—the *Scarabæus retusus* of Say,—but whether it is destructive or not I have no means of knowing. I have found them in great numbers in old hot beds in the middle of a vegetable garden, but never saw any injury done to plants that could be traced to their presence.

The rose bug (*Melolontha subspinosa*) is not too dainty to despise strawberry leaves, when roses and grape blossoms are not at hand. They invaded a strawberry plantation of mine last year in vast numbers, and destroyed half the foliage of the plants, leaving only the skeleton of the leaves. I killed an immense number by hand picking, finding sometimes as many as thirty-eight on a single leaf; but I did not prevent their doing great injury. I count them second only to the white grub in power of mischief.

In the case above cited the rose bugs seemed to come from a piece of woods on the west of the strawberry field, and they are noticeably more active in a bright, hot day than in a dull one. I have noticed, late in the afternoon, the air alive with rose bugs the moment the sun has shone out after a cloudy day, while before that hardly one was to be seen.

I presume there is no means of destroying these pests, except by hand picking, and burning or scalding. The novice who has secured a rose bug should adopt no halfway measures, but should have evidence of the bug's actual death. I heard last season of a vigneron in a neighboring town who picked from his vines in blossom time about two quarts of rose bugs, which he carefully buried, stamping the earth firm over them. The next morning he found, to his horror, that each bug had bored his way to the upper air, and sailed off to fresh woods and pastures new.

Cut worms, the larvæ of various Agrotides, sometimes attack the strawberry. I have, however, lost but few from their ravages. Their presence is indicated by the wilting of the leaves; and the only thing to do is to dig the worms out and smash them. If one is not found near the plant he has cut off, search must be made about the roots of the next.

The wire worm (*Julus*) is said to be sometimes destructive to the strawberry, but I have never seen any vines injured by it. Deep and clean cultivation would perhaps be the best remedy.—Common ants sometimes swarm upon the berries, but may be disposed of by pouring hot water into their hills.

I have seen a small green worm upon strawberry vines; the same I presume, as that described by Fuller in his Manual; but I never found more than half a dozen, and they did but little harm.—If they should appear in large numbers I should try sprinkling with lime or ashes. A scattering of guano on the damp leaves might perhaps annoy them.

Ashes is also a useful means of assailing the *aphis*, or plant louse, which sometimes congregate upon the roots of strawberry vines in light soils.

Some tender kinds of strawberries are subject, in our climate, to sun scald, and have consequently unhealthy foliage; but, generally speaking, the strawberry is singularly free from disease. A sudden cold rain will sometimes cause the blossoms to blight, and the over ripe fruit will mould on the vines in damp weather; but a strawberry bed is never at the mercy of any scourge like those that so often threaten, and which not seldom ruin, a wheatfield, a vineyard, or potato plantation.—[*J. M. Merrick Jr.*

Gardeners, Foremen, Etc.

Those who desire to secure good and reliable Gardeners, Orchardists, Vine-pruners, and Foremen upon their Farms, can be supplied from our Office by sending notice of such wants, and giving us the special duties they desire performed, the wages they will pay, and all the particulars of board, washing, etc.

It will be our purpose to send out no person that is not fully qualified for the specific duties desired, nor any man who is not of good character, nor shall we send out any man until, by a proper test, we know he is qualified in every respect.

Having long experience in this business and knowledge of what is wanted, we shall only give employment to the *Best Men*.

For our time, examinations, correspondence, etc., we shall expect a compensation that will repay us.

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making Scrap Books, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these, we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

BOUND VOLUMES FARMER

Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $3 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and invaluable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and how cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
Farmer Office.

AND

MUSKMELLON SEEDS,

EXTRA QUALITIES,)

Flower Seeds, Choice,

MIXED LAWN-GRASS, ETC.

For sale at the "FARMER" OFFICE.

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Edit. and Prop'rs.

20,000 NEWSPAPERS.

We have TWENTY THOUSAND Newspapers—Newspapers of the largest size among our Exchanges, suitable for WRAPPING PAPER for Dry Goods, Clothing, etc.

—ALSO—

TEN THOUSAND

Of the best Agricultural Papers known, comprising our various Agricultural Exchanges from all the Eastern States and Europe. Farmers who would like valuable reading matter, which contain choice Essays and Letters on Agricultural matters, can have these at low rates by the 100. Apply at FARMER OFFICE.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING JUNE, 16, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the Farmer Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the Farmer Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the California Farmer, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half those rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the Farmer with his paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

(Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our *Journal*, to which we would direct their *special* attention.)

Very important and very valuable information will be found in the "Greeley Essay" this week. We hope every Farmer in our State will read Essay No. 23.

Our European Letter will be found full of interest to our readers.

Our Lady readers will find something that will deeply interest them in our "Home Department" this week—Womans Independence.

We have letters from "Minerva Glen," also from "Philmore," for our next issue, received too late for this week.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

New Grass.

We are indebted to Hon. S. B Axtell for kind favors, and recently for parcels of the new Grass Seed Imported for the Agricultural Department at Washington.

This new Grass comes to us bearing the name of *Serradella*—we shall carefully plant and test its value.

We return thanks to the Secretary of State Agricultural Society at Sacramento, for the Society's Reports of 1868 and 1869, which we shall examine and report upon.

The Census.

We spoke of the Census *three weeks since*; we are highly gratified to learn by documents courteously presented us by Marshal Morris, that the *present Census taking* will be most careful and complete, and will embrace all the objects of interest and value in our State. We shall speak of it further soon.

Grand Billiard Rooms.

We acknowledge complimentary cards to the opening service of the magnificent Billiard Rooms of the "Lick House." Messrs. Lewis & Woodward, Proprietors. We regret our inability to attend, as we know it to be one of the finest Billiard Rooms in America.

OUR NEXT NUMBER

A FEW DAYS REST.

It has always been our custom to reserve for ourselves the Holidays of the year, Thanksgiving, Fast Day, Fourth of July and Christmas. But as our *Governor* gave us no period of rest by appointing a *Fast Day* we lost our rest then, and now comes the *Battle of Bunker Hill*, and the happy visit of our *Boston Horticultural Friends*, and with the desire to meet them and enjoy their visit, we shall take our *rest week now*, so that we may enjoy their coming and pay each visitor the respect and honor we feel for them, and be refreshed by their coming for more labor, and to this purpose we give our rest from usual labor, so that we may have more valuable reports to make.

Our next number will therefore be Thursday, 30th June, with interesting Reports on Horticulture and our Eastern visitors.

SEEDS, PLANTS, ETC., BY MAIL.

The following are the rates by Law:

For all parcels of *four ounces*.....	2 cts.
" " *eight ounces*.....	4 "
" *one pound parcels*.....	8 "
" *four pound* "	32 "

No parcels to be above *four pounds*.

All parcels should be carefully done up and sealed.

PIONEERS OF SCIENCE.

HORTICULTURAL VISITORS.

For about one year the earnest friends of Horticulture and Agriculture have been wishfully looking forward to the time when they could greet with heart and hand, the Great Apostle and Leader of Horticulture in the United States, Hon Marshall P. Wilder. A name that is identified with the History of this science the world over, and whose presence and labors have been prominent in our National and State Exhibitions of Horticulture for the last Forty Years. Therefore we may truly say Marshall P. Wilder is the Venerable, and all will say the Honored Apostle of Horticulture.

We append a brief letter we received the present week, just on the eve of the departure of Mr. Wilder and his co-laborers in Horticulture from the East.

His letter reads, Boston, June 6, 1870.

Mr Dear Sir:

Our party will leave Omaha on the 16th, for San Francisco. We shall have with us Downing, Barry, Ellwanger, and other Horticulturists, with Ladies.

Yours as ever,
Marshall P. Wilder.

To Col. Warren.

This announcement we know will be hailed with joy by every warm hearted friend of Horticulture and Agriculture, for no one man in the United States has done more or shown greater devotion to these great pursuits than President Wilder, who is now, and has been for years, the Head of our National Pomological Society, and as its President has led it on with his earnest spirit and teachings, with the generous co-operation of others, several who now come with him, to its present high standing and influence.

The name of Marshall P. Wilder, therefore need only to be announced, for many thousands to recall his great and noble efforts to the cause he so dearly cherishes and for which he comes to the Pacific Shores with his friends, that he and they may take full cognizance of the vast wealth that is here unfolding in our Orchards, Vineyards, Grain-fields and Flower Gardens.

Mr. Wilder himself, has been most fortunate in the production of new varieties of Fruits and Flowers of many and rare kinds, all of which have added to his name and fame, great credit and honor.

The famed Camellias "Wilderii," named for himself, as the grower of this rare flower, while he was President of the Massachusetts Horticultural Society, and also "Mrs. Abby Wilder," another very beautiful Camellia, both named by the above named Society. These with the "Wilder Pear," and the "Wilder Strawberry," just now made known, are among some of the results of a life labor in this cause.

But it is not our purpose to eulogize by these remarks, they are cited that we may briefly make known to those who know him not, a little of the great good he has done, and which is a matter of history now.

With Mr. Wilder comes men identified also with the same great cause, each prominent men, men that have done a world of good by their labors, which are also a matter of history.

Downing! That is a name that is indeed bright with honor on the pages of the Horticulture of our country, and the present visitor is one of the same family on whose shoulders the Mantle of the Elder Downing now rests, and we are glad to say he keeps the Ermine Robe faithfully pure and wears it most worthily.

Barry! Another name too, identified with the Literature of Horticulture, (from New York,) in Barry's Fruit Book—and many works and writings that have reflected great credit upon him as the author.

Ellwanger! The world wide Nurseryman of Rochester, N. Y., whose hundreds of acres of Nurseries can truly be said to be the largest and most extensive, and most complete of any in the United States. Long years of practical experience places him at the very head of the Nurserymen of our Country.

These are the men named that comes to us—these and others, with their *Companions de' Voyage* to see for themselves the wonders of this country called

GARDEN OF THE WORLD.

We hail them now as we write in the name of all on the Pacific Coast, who love Horticultural Science. We hail them with a hearty, earnest and Sincere Welcome, as they are now coming over the "Great Highway of our God," foretold in the Sacred Volume.

We hope soon to greet them, for as we this day (the 16th) write, we receive the following message by the Telegraph wires.

Omaha, 16, 1870.

Col. Warren, Editor Cal. Farmer.

Your Telegram received, will leave here at 4 o'clock P. M.

Marshall P. Wilder.

The Electric message now assures us that soon we shall meet face to face the men whom thousands will gladly greet.

"THE LADIES COME WITH US."

This was the closing words of Mr. Wilder, it will be remembered in his letter one year ago, when speaking of his intended visit here with his friends.

This is as it always should be in all such journies to scenes of interest and grandeur Woman should be the companion of man, for they by their quick perception, are more certain to recognize and to point out the "Beauty spots in every Landscape," in the same spirit with which intelligent Woman ever gives to social converse and intercourse, the best influences, those that elevate and purify, giving to life those blending harmonies that make life worth possessing.

With all the friends of Mr. Wilder we rejoice to anticipate his coming, and to know we shall see him, hear him and receive his aid to advance the Horticultural interest of the Pacific Coast, for it is to be hoped from the position he occupies in the Agricultural College of Massachusetts, as well as other Institutions, that our people will hear from him by some Public Addresses at fitting opportunities whereby we shall have the benefit of the experience of his long and useful life.

It is the happy anticipations of many warm friends of President Wilder that they may have the pleasure of greeting him and his able friends upon the Mountains, as they come to us over the Summit.

No greater pleasure could be given,
Than to meet them, there so near to Heaven.
Tho' brief our time, tho' short be hours,
We'll greet them with our Fruits and Flowers.

BATTLE OF BUNKER HILL.

June 17, 1775.

This memorably day will shine upon us with the morrows sun, not the day of blood of olden times, but the day of Peace, the result of that Baptismal Water of Freedom shed on that memorable field in olden times.

We rejoice to know that the day is to be commemorated. It is a day never to be forgotten by the Sons of the Pilgrims, or by their descendants. If there be a single living creature who claims to be American, and who fails to remember the past history of our country, its cost of Blood and Treasure in order that Liberty and Freedom should prevail, that creature is unworthy the blessing of Liberty and Freedom, for he does not value his Heritage.

We often fear we are degenerating as we see *these days*, like the one named—these *Landmarks* of our Country's history, past without a due remembrance and a tear of gratitude for those who so freely poured out their blood, that we their descendants might live in a

Land of Freedom.

CALIFORNIA MARBLE vs ITALIAN MARBLE.

"That which is far fetched is *always dear*."—This old proverb we think is often found to be sadly true.

We recently noticed the sale of the famed Carrari Marble Quarry to an American, for a large sum.

We do not remember the name of the purchaser, only the fact of the sale of this Quarry, which we think can be equalled by our own purely white, and perfect Marble from the "Indian Diggings," owned by the Messrs Aiken & Co., Marble Works of Sacramento. And here we can say if any person wishes to see samples of this excellent mine at Indian Diggings go to this firm.

The Sales Rooms of Messrs Aiken & Co., at Sacramento shows some very splendid Marble, and their work is also very superior.

GREAT WOOLEN EXHIBITIONS.

OHIO AND INDIANA.

This Autumn there will be two great and grand Exhibitions of Woolen Manufactures—one at Cincinnati, Ohio, and one at Indianapolis, Indiana.—Of both these Exhibitions we spoke fully last week, urging our Manufacturers and Producers to send on samples to each of these grand shows, as this would make our State and its products better known.

To advance these interests and these Exhibitions, and to awaken a better interest here among our own people, and place before them, these advantages, we have continued the card of the great Exhibition at Cincinnati, and hope good will accrue to all for what we voluntarily do in this matter.

EXTRA NUMBERS.

We make it one of our plans in the dissemination of such agricultural information as we deem of particular importance and value, to issue and send out hundreds or thousands of Extra Copies of our Journal, we send them broadcast, freighted as we hope with seeds of truth that may accomplish great good.

Of such editions we mail copies to active, prominent and influential men everywhere, and to Postmasters, ask them each and all to *read* and pass to others that the greatest good may be done.

The present number of the Farmer contains much that we trust will prove of value to the reader, and we hope many who read will co-operate with us in our work, and extend the influence of our Journal.

Those persons who wish to give correct views of our State and its resources, a correct market report of all the products, should send the Farmer regularly to their friends.

AGRICULTURAL COLLEGE REPORTS.

We are desirous of procuring from the several Agricultural Colleges of our country a list of all their officers, the Professors, Teachers and Reports of their condition and progress, and we shall be greatly indebted to the Secretaries of these Institutions if they will aid us in collecting a history of their *Rise and Progress*. We will cheerfully reciprocate the favor in any way in our power.

Look to your Vineyards.

Now is the time to watch the vineyards and be prepared to ward off the attack of the "Mildew," "Thrip," or any evil to the vine; also to watch its growth, and *nip out* all fine lateral branches above the fruit; the judicious pruning, enlarges the crop, and secures a better quality of fruit also.

NEW AND RARE FRUITS.

The *Gardner's Monthly* of Philadelphia, gives the following:

New Apples.—Almost every agricultural paper has now its drawings and descriptions of new apples. Though anxious to make the *Monthly* a record of Horticultural progress, it is nearly impossible to keep up.

In the *Rural New Yorker*, the following have recently been named: Quaker Beauty, Oct. and Nov.; Hesper's Blush, Oct., Nov.; Beecher's Sweet, Oct., Nov.; Stewart's Sweet, Oct., Nov.; Pride of Minneapolis, Pride of the Prairie, Honey Sweet, Coral, Peffer's No. 1, Winter Gem, Busby's Early, Aug.; Parry's White, Aug., Sept.; Orange Pippin, Sept.; Olime's Codlin; Newville, Dec. to Feb.; Prolific Blush, Aug., Sept.; Cone, July, Aug.; Potter's Early, July, Aug.

Some of these are crabs. They are all good kinds and worthy of attention.

Nicanor Strawberry.—A Boston letter says: "The only Strawberry I had freely in bloom on the first of May, was the Nicanor, which shows it to be a very early sort, supposing that early blooming and early fruiting go along together."

NEW AND RARE PLANTS.

Double Lilac.—Amongst the new plants we have seen this year likely to prove desirable is the Double Lilac. It is about the same color as the common purple—perhaps a shade paler. In common with most double flowered plants the growth is not so vigorous as the single flowered kinds The bush is more compact, which give it a distinct habit. We have no doubt it will become popular.

Lilium Longiflorum Alba-marginatum.—This interesting new Lily has been recently imported from Japan. The leaves have a distinct and even narrow border of white, which adds considerably to the interest of the plant, while the habit of growth is similar to that of *L. longiflorum*, and the flowers also are pure white, as in that species. It forms a very pretty and desirable novelty amongst Japan Lilies.—*Bull's New Plants.*

GEO. O. WHITNEY & CO., FURRITURE WAREHOUSE.

A VALUABLE TABLE.

Table Mountain has been productive of Gold, is a *rich* place, Table Rock at "Niagara" was an inspiration point of *Beauty*, now gone forever, and an *Editor's Table* is generally a very overloaded place, where riches in thought and beauty of conception, often pays for the *overload* it bears, but thanks to Messrs. Geo. O. Whitney & Co, they have by their excellent foresight and their good taste, have invented and imported a splendid style of Table—just right for an *Editor's Table*, and also for a Ladies Boudoir Table, a beautiful Black Walnut Table, having a series of compartments for letters, stationery, &c., just what an Editor wants, and just right for a lady's boudoir, where a *Sewing Table* and *Writing Table* is combined for convenience and comfort.

It will be seen that Messrs. Whitney & Co, have lately added to their warehouses the large Rooms, once occupied by Stringer & Co., and thus making a very spacious frontage and Display Rooms where their new and rich Furniture lately arrived can be seen to advantage.

FROM LOS ANGLES NEWS.

Great Fishing.

A party returned yesterday morning from the San Gabriel Canon after a brief fishing trip, having caught upwards of 800 of the speckled beauties. They declare that trout fishing degenerated from sport to hard work, so numerous and hungry were the fish. Some were seventeen inches long.

Deep Well.

An artesian well now boring at Wilmington by A. E. Putney, is down 240 feet and no water yet. This is one of the deepest ever bored in this valley.

Look to your Orchard Trees.

Our orchardists are too neglectful of their orchard trees, many are not pruned at all, the whole strength allowed to go to making wood instead of fruit. Fruit growers should *summer-prune* their fruit trees as well as their grapevines—shorten all bearing branches—*thumb prune* all the young wood before the bearing spurs.

Vegetable Growing.

It is a great pity that so many of our farmers who have plenty of land yet never a vegetable scarcely on their own tables. Even their potatoes they purchase in the market, and as to green peas and beans, tomatoes or sweet corn, melons and cucumbers they are never seen on their tables save as a luxury, while for the want of them, and the cost of producing by labor, they loose in health, strength, and expence in medicine and doctor's bills, ten times the amount.

Insurance.

Farmers are your Buildings all insured? If not, do not sleep another night until they are fully covered by a Policy of Insurance. Then your property and that of your family and their Home, and interests are protected.

H. H. Bigelow Esq., the General Agent of this Company is one of the most experienced consulting Agents on this coast.

No one should rest until their property is fully covered by Insurance in a solid company. The Dry Season is upon us—and danger all around us. See Pacific Insurance Companies Report—Insure there for safety.

Pumps—Irrigation.

We have so often spoken of the importance of water for stock, that we again reiterate it as equally, and in many cases more important than water for Irrigation. And one of the very best Pumps for Stock men, is the Gaines Pump, for sale by Messrs Linforth, Kellogg & Co., on Front St.—Our Farmers should have this Pump for their Stock yards. Send for Catalogues.

COATES BROTHERS' WOOL CIRCULAR.

Philadelphia, June 1st, 1870.

As the new clip of wool will soon be ready for sale, farmers generally are desirous of knowing what they are likely to realize. At this early period, however, it is difficult to form a decided opinion, owing to the continued dull state of trade which has prevailed throughout all the Eastern markets for an unusually long period. Should this depressed state of business continue into the fall, we cannot reasonably look for higher prices in the Eastern markets than have ruled during the past season, and many manufacturers, who may have stocks of goods on hand, or who have had their stock closed out at unremunerative prices, will not be in a hurry, and their agents out west to pay even the same figures that they were obliged to pay last year; especially as there is yet considerable old wool on hand in the Eastern markets, that can be had relatively cheaper than the prices that have been obtained in the country.

Most manufacturers also prefer the old wool at the same price as there is always much less loss from shrinkage, and until the stock in the east is closed out manufacturers must see more difference in price between east and west than there was last year, to induce them to enter the market early. But as the wool in most parts of the country was nearly all sold out last year at good prices, farmers will naturally expect about the same this season, and many of them may not be disposed to accept lower figures, until they find that the buyers do not rush forward as eagerly as usual. Should, however, there be a revival in business with a prospect of better prices for the fall trade, manufacturers will of course be more inclined to pay the growers satisfactory prices for their wool.

The present prospect for good crops throughout the country is the most encouraging feature, on which to base hopes for an improved fall trade that may warrant both farmers and manufacturers in anticipating a general improvement in prices resulting to their mutual benefit. The great ease in the money market, and the low rates of interest now ruling in all the Eastern cities will probably in some measure tend to prevent very low prices—although of itself it may not immediately enhance either the price of wool or woolen goods.

The sales for the month, of Domestic Fleece, Tub-washed and Pulled Wools, foot up about 1,197,600 lbs within the range of 48 to 51 for Fleece, 43 to 53 for Tub-washed, and 38 to 40 for Pulled.

COATES BROTHERS,

WOMAN SUFFRAGE IN MASSACHUSETTS.

The Legislature of Massachusetts having had the question of Woman Suffrage before them for some time with a proposed question to amend the Constitution of the State, so as to make it a Constitutional right, have by the vote of the Legislature, decided 133 against to 68 for it, being nearly 2 to 1 against woman suffrage.

This vote will surprize many, as it has been said of that State, as goes old Massachusetts so goes the Union.

THE FENIAN RAID.

"The mountain labored and brought forth a mouse."

We do not wish to speak disparingly of any effort made for true freedom; but we do think that these raids should be frowned down by all men of sense, and by all men who desire a stable government.

When it can be easily be seen by the "Sons of Erin" that they labor at so great odds, and against a Government that is so strong, it is most unfortunate that human life should be thus wasted for it can result in nothing else in such hopeless efforts and with such material.

Sale of valuable Sheep.

We call the special attention of our Sheep men to the very valuable Flock of Sheep advertised in our columns this week. They are the very finest flock ever offered for sale on this Coast, and presents an opportunity to purchase rarely offered.

This very large and most superior lot of Sheep to be thus sold at Public Auction, should attract people from all parts of the State and Oregon, for those who are in the business have never yet had so excellent an opportunity to secure good stock, the very best, as the one now offered. Terms, &c., we hope they will not forget. (See Advertisement).

BILLS SENT OUT.

We would call the especial attention of those who receive Bills from this office for dues to the Farmer, that as we are now approaching the close of a volume, (Our Thirty-third Volume,) we must ask those who receive these bills to favor them an immediate response.

It is always the most unpleasant duty we have to perform, but simple justice to ourselves demands that we should speak plain. It is very easy for all to *remit promptly*, and thus make our work light and pleasant.

We now say to those who receive Bills, we ask their *prompt* attention and prompt remittance, that will save us the trouble and expense of other modes of collection to which we must resort if this plan is not sufficient, for it is but right that these bills should be paid cheerfully and promptly.

We have many names we honor, each time we write them, for they are our allies and our friends, they aid us in our work. There are other names which—which—are not so pleasant when we write them.

Reader! to which list do you belong? If the latter, change it we beseech you, and you and ourselves will both feel better.

CINCINNATI
Industrial Exposition.

CHARLES F. WILSTACH, Pres.

J. H. Lawe, J. Kirby, } Vice Pres. H. A. V. Post, Tr. A. L. Frazer, Sec.

COMMITTEES.

Chamber of Commerce.
Abner L. Frazer, S. F. Covington, J. H. Lawe, C. H. Gould, Jacob Elias.

Ohio Mechanics' Institute.
Chas. F. Wilstach, Hugh McCollam, Jas. Dale. Thos. Gilpin, P. P. Lane.

Board of Trade.
A. T. Goshorn, Josiah Kirby, H. A. V. Post. W. H. Blymyer, D. B. Pierson.

The Board of Managers of the Cincinnati Industrial Exposition take pleasure in announcing that an Exhibition of Manufactures, Products and Arts, will be opened in Cincinnati, commencing Wednesday, September 21, 1870.

On behalf of the Chamber of Commerce, the Board of Trade, and the Ohio Mechanics' Institute, under whose joint auspices the Exposition will be held, we cordially invite Manufacturers, Mechanics, Agents, Inventors, and others, to contribute specimens of their skill, ingenuity, and taste to this Grand Exposition, and make it a true index of civilization.

It is the earnest desire of the Managers to make this Exposition of Art and Industry superior, in point of attraction and practical benefit to all concerned, to any display of a similar nature which has ever been held in this country. therefore call upon all who are interested in the success, prosperity, and continued improvement o our domestic industry, to cooperate in an united effort to make this Exposition a grand success.

Seems almost unnecessary to present any arguments to show the great advantages of these periodical Expositions; all are alike interested in their success and maintainance; and the experience of past Exhibitions in all parts of the world, furnishes the most conclusive evidence of their great value as a stimulus to Art and Mechanism] They may be regarded as a direct incentive to emulation on the part of every artisan and producer, which will invariably be followed by a corresponding increase in prosperity; and in view of which we confidently anticipate a generous response and a hearty co-operation from all.

In order to give accommodations which will be commensurate with the demands that will assuredly be made upon us, we will erect a commodious Exhibition Building, upon a scale far exceeding anything of the kind yet erected for a similar purpose.

Steam power will be provided, that Machinery of all kinds may be seen in actual operation, displaying the advantages and capabilities of various machines under one view, and thus testing the invention or workmanship of the various machines in the most perfect and interesting manner.

Exhibitors from different sections will find Cincinnati the most favorable location in the West. Our noble River, and the different Railroads that radiate from the city in all directions, afford ample facilities for the transportation of articles.

We again, therefore, invite them to use this Exposition as a valuable means of introducing their productions, assuring them that they will here find a generous competition and an appreciating public.

The Exhibition is not intended to be in the least degree exclusive as regards the character of the articles to be exhibited. We hope to see Art and Mechanism fully represented in all its various branches; also, the products of the Soil and the Mine. And we also trust that the Ladies will grace our Exhibition, not only with their presence, but also with an appropriate display of their handiwork. A Committee of Ladies, auxiliary to the Exhibition Committee, will be appointed in due time, who will take especial charge of such handiwork and see to its proper arrangement for exhibition, and also to the appointment of judges in that Department.

The most ample arrangements will be made with the various Railroads, Steamboats, and other lines, to transport visitors and articles intended for the Exposition at the most favorable rates, full particulars of which will shortly be published.

In conducting the Exposition, the Board of Managers pledge themselves to exert the utmost diligence and care to satisfy both depositors and visitors.

The Premiums and Awards will be of the most ample character, both in number and quality.

It is very desirable that all parties intending to contribute to this Exposition, should give early notice of articles, amount and kind of space required.

Any information will be promptly given by addressing the "Secretary of the Cincinnati Industrial Exposition," who will furnish the Rules and Regulations, and also blank Applications for Space.

CHAS. F. WILSTACH, Pres't.
Abner L. Frazer, Sec'y.

N. B.—The Rules and Regulations for this Grand Exhibition, can be seen and explained, and all needed information had at the California Farmer Office.

Agents Wanted.

We want good Agents for every County in the State to canvass for this Journal.

We wish to employ good, smart, capable, intelligent men—those who have common sense views upon the Value of our Agricultural Interests.

To persons of general information, and of active habits and courteous manners, a very liberal salary can be earned.

None need apply who cannot bring undoubted references. Apply to

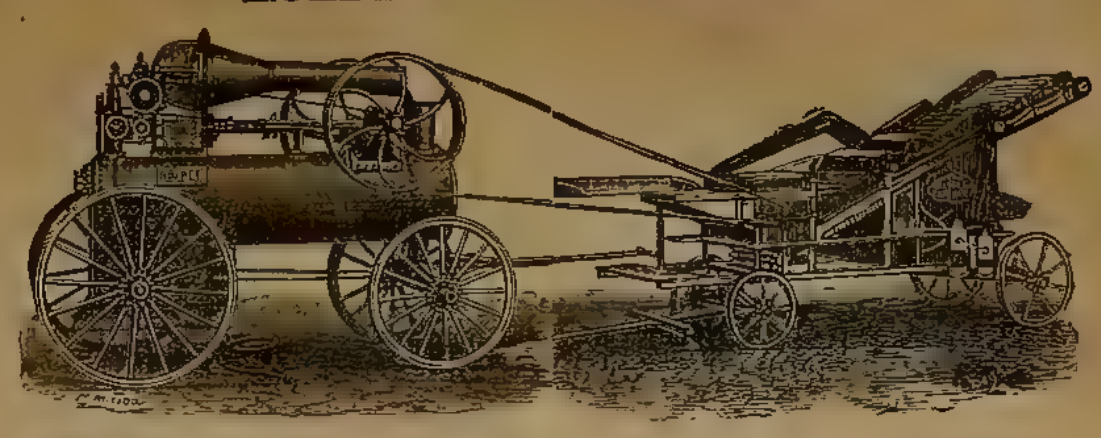
"HOADLEY" "RUSSELL!"



HOADLEY'S IMPROVED THRESHING ENGINES!!

RUSSELL'S IMPROVED SEPARATORS!!

CONSTITUTING PERFECTION IN THRESHING GRAIN!!!

THESE MACHINES are now so completely constructed as to render them the very "NE PLUS ULTRA" of ENGINES and SEPARATORS for the Farming community of California.

THE ATTENTION of the FARMING community and the public generally is called to the GREAT IMPROVEMENTS on the above make of Engines and Separators, which are surpassed by none for threshing grain, and are specially adapted to the use of Farmers.

Improvements on Russell's Separator.

THE SEPARATOR has been increased six inches in width, the sieves being much enlarged, to correspond; the 33 inch Cylinder now having a 40 inch Sieve, being six inches larger than the old style; and the 36 inch Cylinder Sieve has been increased six inches, and is now 48 inches, which greatly enhances the capacity of the Machines.

HAINES' HEADERS
With Doane's Adjustable Reel.

IN OFFERING these SUPERIOR HEADERS to the Farming Community of California, we can safely say that we have now brought the HEADING MACHINE to as near perfection as is possible.

THE MOST USEFUL IMPROVEMENT YET MADE.

WHICH is a simple arrangement for Raising and Lowering the Reel some 18 inches, so as to enable the REEL to reach lodged grain, different lengths of stalks, and to be used in windy weather without stopping the Machine, and the consequent loss of time and labor in adjusting the old style Stationary Reel, which took some FIFTEEN MINUTES. The belts are always of the right length, and you can adjust the Reel to any grain with the greatest ease,

AND WITHOUT LOSING A MINUTE'S TIME!

THE GREAT point in our New Headers will commend itself to all purchasers, and no other Headers will be used when the great merits of this improvement are known.

CAUTION.

ALL PERSONS are Cautioned not to infringe upon our Patent Adjustable Reel Headers, as they will be prosecuted.

3- PROPRIETOR

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER."

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete Information, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

32-12, GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

Home Miscellany.

THE ANGEL AND CHILD.

Translated from the French, and affectionately inscribed to Mrs. A. E. S., by MARIE, in *Monitor*.

An angel passed, on wings of light,
From out the blest, adoring number,
And softly took his earthward flight,
To watch an infant's rosy slumber—
And mirrored in the placid face,
Thus by his guardian glance protected,
His own pure smile of heav'nly grace
He saw, as in a brook reflected.
"Sweet child!" the holy watcher said,
"Thou angel-likeness, pure and tender!
O come with me, where seraphs tread
The pathway of celestial splendor.
Fly to thy home of cloudless joy!
Earth merits not so fair a treasure—
Her golden gifts are base alloy—
The worthless boons of worldly pleasure.
Here, smiles forstall the weary sigh,
And sunbeams hide in shades of sadness,
The wail of woe, the anguish cry
Succeed the ringing shouts of gladness.
Grim fear is joy's unwelcome guest—
Mirth smiles—the messenger of sorrow;
To-day, the vales in calmness rest,
The tempest rules unchecked, to-morrow.
Shall terror pale this shining brow?
Shall grief o'ercloud its smiling sweetness?
And dim these azure eyes, that now
Are bright with joy's serene completeness?
No! no! thy sunny path must be
O'er fadeless fields and meadows vernal—
Where, star-crowned, Peace shall shed o'er thee
The radiance of a day eternal.
And thou, through endless years shalt wear,
The angel garb, the robe of brightness,
And no dark stain of guilt or care
Can ever soil thy vesture's whiteness.
No grief shalt shroud in midnight gloom
Thy soul's serene and smiling splendor,
Nor show the dark and cruel tomb
Concealed in bloom and brightness tender.
Then fly! sweet child! away! away!
Ere time can dim the smile thou wearest.
Earth's parting hour—her latest day
Shall be thy happiest and fairest."

The angel, 'neath his wings of light,
Hath fondly clasped a sinless brother,
To Heaven they take their willing flight—
Thy child is dead, alas! poor mother!

SAN MATEO, June, 1869.

BRIGHAM YOUNG'S HAREM.

The rooms of the women are very much alike, and furnished nearly alike. They are plain, but comfortable. The women live in them precisely as people do at a hotel. Each lady has her own key, and when she goes out she locks her door. There is little visiting back and forth, and the ladies behave very much as guests do at a first-class hotel. Every morning and evening, at the ringing of the bell, the inmates of the harem meet in the great parlor to attend prayers. They sing a hymn, and Young prays fervently. The prophet used to eat at the harem with his wives, but he seldom does so now. In the morning, on rising each woman puts her room in order, and if she has children, dresses them for breakfast, the ladies with children sitting at little family tables, and those without children at the common table. The same food is given to all, and the bill of fare is by no means a poor one. Brigham, from time to time, designates some of his wives to take charge of the cooking, and they remain on duty until relieved; during the day the women walk out, sew, sing, play the piano in the parlor, and walk with the children. Most of them spin, make cloth and color it. They are very proud of their cloth and embroidery. In the evening all hands go to the theatre, where every one of Brigham's wives has a reserved seat. It is said that Young liberally supplies his wives with money, and on fine days they drive out and go shopping. He employs a music teacher, French teacher and dancing master for the use of his household. Brigham's women are well dressed, but still they have to work hard, and he keeps up a wholesome discipline over them.—*Letters to Cincinnati Gazette.*

A GOOD HEART.

There was a great master among the Jews, who bid his scholars consider and tell him what was the best way wherein a man should always keep. One came and said that there was nothing better than a good eye, which is, in their language, a liberal and contented disposition. Another said a good companion is the best thing in the world. A third said a good neighbor was the best thing he could desire; and a fourth preferred a man that could foresee things to come—that is, a wise person. But, last, came in one Eleazar, and he said a good heart was better than them all.—"True," said the master, "thou hast comprehended in two words all that the rest have said; for he that hath a good heart will be both contented, and a good companion, and a good neighbor, and easily see what is fit to be done by him." Let every man then seriously labor to find in himself a sincerity and uprightness of heart at all times, and that will save him abundance of other labor. —*Bishop Patrick.*

The man who shows that he is vain of having done us a favor, pays himself, and saves us the trouble.

IS IT SAFE FOR WOMEN TO APPEAR ALONE IN PUBLIC?

BY MRS. E. E. DUFFY.

Some time since I had my indignation aroused by an article in the *Round Table*, which contained a long and elaborate argument to prove that it was improper and unsafe for women to visit, alone, public places of amusement, to travel "unprotected," to ride in our city cars, or even walk the streets in broad daylight.

I have long been fully convinced that but one of two ways can be the right one concerning women, and that one must ultimately be adopted: either the Turkish social system is correct, and women should be entirely excluded from public places, or else they should be allowed unquestioned personal freedom as human beings. Now, being myself a woman, and having a natural antipathy to the imprisonment of the harem, I claim my right, as a human being, with an independent will of my own, to come and go when I choose and where I choose.

The Editor of the late *Round Table* may have a right to speak from his own instincts, and tell the world how he himself treats women when he finds them alone and unprotected; but we believe the vast majority of men will challenge his right to speak for them.

However, one woman's actual experience is worth more than the speculations of a score of men; and this is mine for the last fifteen years.—For years my business interests frequently compelled me to be out late of an evening, and I became accustomed to walk the streets of a populous city, "unprotected," yet without thought of fear, and always unmolested. I have walked squares in Philadelphia at midnight, through streets where one might look for insult, if anywhere, just as safely as in broad daylight. I am a frequent rider in the city cars, and find them as safe as the pavement. I have traveled many times alone on the railroad through different portions of the country, and have yet the first unpleasant occurrance to meet. In the course of my travels I have found many gentlemen, and if there were others on board who were not, they did not seem in the least attracted by me. I have been in offices where I was the only woman, not only during the day, but late into the night, and must still add my testimony that I have met uniform courtesy, added to a manifested avoidance of anything that might annoy or offend. In days gone by it, was no rare occurance for me to go to the theater alone at night, but instead of ushers displaying special rudeness, as the *Round Table* Editor assures women they are certain to do on such an opportunity, I have to thank them for their kindness to me, and have no doubt I often fared better in the way of a seat than I would have done if my husband had accompanied me to look after my interests.

But, reviewing my experience in my own mind, I thought to myself, "You are a plain, unattractive body, and for that very reason exempt from the annoyances that may befall others." So I called a friend in consultation—a lady of pleasing personal appearance and most engaging manners—one who at once prepossesses every stranger in her favor. I knew that she had exercised a freedom equal to mine, while her experience was even more extended. She has traveled alone thousands of miles, by car and steamboat, both in the North and South, and never hesitates to go anywhere, or do anything she really desires, through fear of Mrs. Grundy.

So we two met in conclave and gave the subject a thorough discussion, with one of the offending sex for an audience. Said she:

"My father taught me, when I was young, to go quietly along the street, never to indulge in loud talk or laughter, never to stare at passers or bystanders, nor to be constantly straining eyes and ears to catch an impertinent look or comment.—I have followed this advice, and if people stare at me, I do not see them; if they make insulting or unpleasant remarks, I do not hear them. So, whether they do or not, I think and know nothing about it, and am not hurt. I believe," she added, "that it is this fear, or pretended fear of insult, that most often incites it. If a woman expects to be insulted, her manner generally shows it, and there are men generous enough not to wish to see her disappointed. It is in a perfect self-forgetfulness and a total absence of fear a woman finds her best safeguard."

I remarked that the writer of the *Round Table* article lived in New York, and possibly that Sodom among cities might be essentially different from our own quiet Quaker town.

"I have," said she, "been in New York alone and a perfect stranger. I have had dealings with ferry men, hack men, baggage men, hotel clerks. I have travelled up and down the principal streets, visited art galleries and other places of interest, explored Central Park, and found always the same courtesy—always the same freedom from insult."

So New York stood acquitted of any especial wickedness.

"But how about attending public places of amusement?" I asked.

"I am alone in this city, with my mother and sister with me. I have no brother here—no cousin. There is no man upon whom I have the slightest claim to pay my expenses, and see me safely to and from such places. So when I wish to go to a theater, concert, or opera, and feel that I can afford it, I shall not and do not hesitate to take my mother or sister, and go as independently as if I were a man. And I've yet have met any annoyance, and never expect to."

It is my belief that a real lady carries that in her demeanor—in her very presence—which turns every man who comes in contact with her, unless he be a brute, into a gentleman for the time being. I think all Americans, whether of high or low degree, have an instinctive chivalry that not only prevents them from annoying a woman, but leads them to become her impromptu protector when they see her annoyed. And the woman who dispenses with the one conventional protector is paying the highest compliment possible to the sex, saying as plainly as action can say: "I do not fear you, for I know that I can trust you; and I know that if I am in danger I will find a hundred protectors who will see me suffer no harm."

While we see men bear so patiently the arrogance and assumption of many women who take the courtesies that the stronger sex pay to the weaker as their right, without a word or look of gratitude, we feel sure they can endure the modest independence of a true woman who never asks for help except she needs it, and then always gracefully receives it and gratefully acknowledges it.

Any woman whose experience is largely the reverse of mine and my friend's, I can not help setting down as possessing a strongly prurient imagination, in being constantly on the watch for annoyances, and fancying insults where perhaps none were intended; or else that there be something peculiar in her mein and behavior to attract the evil disposed. She, at least, must be lacking the essentials of ladyhood.

And here permit me to say that the experiences which some literary ladies have taken such great care to spread before the world, touching the conduct of certain individuals who control editorial positions, must be exceptional. I can never believe that any responsible editor in this country would so far forget his manhood—to say nothing of his mother—as to insult an unprotected female, or to place himself at such a sure disadvantage as to make disgraceful overtures, knowing that they would be indignantly repelled. Our editors are neither demons nor fools, whatever else they may be; and any editor in any civilized American city who would so disgrace his profession as to insult a virtuous and modest woman, would not be permitted to hold his position for a day.

I do not expect to find all men saints, but I am certain that they are not all satyrs. There are brutes to be met with occasionally in the world who have no reverence for either God or humanity, and if a woman is unfortunate enough to meet one occasionally, let her console herself with the thought that it is only once in a while; and if his mother, sisters, or wife must endure his daily brutality, which, of course, in the "sanctity" of domestic life he is privileged to make far more outrageous than he dare do in public, it will not seriously injure her for the once.

There are, in these cases, a convenient blindness and deafness that become a most impenetrable shield. It must be a persistent man indeed who will continue annoyances and insults which only rebound to him, without making any impression on his intended victims.

I believe if women really want their freedom in these matters, there is scarcely any obstacle in their way to prevent their taking it. Only let them, on all occasions, bear in mind that they are ladies, and behave as such. Let there be no assuming of masculine manners along with masculine liberty; and—though of course I can not speak of foreign countries from actual experience—I believe they may travel alone from one end of civilization to the other with perfect impunity.

"GOOD ENOUGH FOR POOR FOLKS."

BY HARRIET N. AUSTIN.

I have known a father and mother who owned the land on which they lived, with a comfortable, convenient, neat house, with good health and healthy children, but who were obliged to work hard every day, (with the exception of now and then a holiday,) in order to feed and clothe the family respectably and keep the children at good schools and have a little spare money to buy now and then a book or a picture or a birth-day present for the children or to go to a concert or a lecture, habitually to speak deprecatingly of their poverty. If they had to buy a rag carpet instead of an ingrain, or a calico dress instead of an alpacca, or eat with steel forks instead of silver, or, upon occasion, get along with a cold dinner, one of the parents would be sure, without regard to the presence of the children, to remark in ironical tone, "It is good enough for poor folks." I always feel sad to see persons take this attitude, both on account of the influence which it has upon themselves and also of its influence upon the children. No truer saying could be uttered than that of Ralph Waldo Emerson, "The poor are only they that *feel* poor; and poverty consists in feeling poor."

What injustice parents do their children when they educate them into the feeling of poverty? What lack of appreciation they show of their country and its institutions and of the goodness of God to them when they cherish the feeling of poverty in themselves, with wholesome food to eat and warm clothes to wear and a house to shelter them, and children growing up intelligent around them; when with honest industry they cannot avail themselves of the benefits of good schools, of churches, of public halls, of railroads, of the post office, or innumerable conveniences and comforts which half a century ago were reckoned among the luxuries of life; when they are surrounded with friends and improved society.

Families so situated should not permit themselves to feel the cramplugs of poverty, because the feeling impoverishes the soul. They may well seek to better their condition, to have money against a rainy day or to spend in private charities or for the public good; but they should know that if they cannot be happy and content in their present condition, they would be unhappy, and discontented living in a mansion, wearing silks and broadcloths, eating dainty food off silver plate, sleeping on beds of down, pampering their children with every luxury and extravagance, attended by servants in livery and having hundreds of thousands locked up in the vaults of a bank. Many a married couple who does live in such style, look back to their years of frugal, economical and industrious life as the happiest they have ever known. 'Tis a great thing to learn to know when we are well off, and to enjoy as we go.

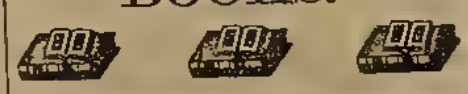
The children of very rich parents, when they have reached the meridian of life, almost uniformly have good reason to envy both the character and position of their cotemporaries whose parents were hard-working, prudent, careful people, compelled to teach their children self-denial and industry. Because you are poor in money, do not therefore stamp poverty into the souls of your children. Do not train them to feel that money is the chief good. Never allow them to believe that their lowly home is less happy or desirable than the homes of their mates, though these are larger, finer and more splendidly furnished. Feeling poor is being poor. You can so teach your children that they shall be as happy walking in plain clothing, as the children driven past them in rich attire and handsome carriages; and if so, what is there to envy? Never again use the phrase in presence of your children, nor feel in your own heart, "Good enough for poor folks." Let your children believe that nothing is too good for you, if it were convenient for you to have the best. But at the same time let them know that no privation, can make you less loving, less loveable, amiable, kind, benevolent, charitable, and happy, than as if you had means to practice any self-indulgence instead of being obliged to practice self-denial. Let them know that life does not consist in the abundance of the things which a man hath, but in growth of character. But remember that all teaching by precept is as nothing compared with your own example in its influence on your children. If you are not poverty-stricken in soul, if you rightly regard money and its uses, and are duly grateful for the blessings which are ours to enjoy, you will give your children a portion more to be desired than great riches.

HEAVEN.

Heaven is a place where all is right. The mind hovers around that thought; is pleased with it; settles down in it. We are living upon the surface of a shattered world. The earth is in the midst of an eclipse. A deformed race are born here, and here they die. No damaged thing is found in heaven. The souls and circumstances there are just as they should be. Heaven is the chief joy amid the realms of God. Glorious land! how many sigh to reach thy abodes. In exile we wander here in darkness; in the midst of death. No day finds us well; no hour is radiant with the light of the eternal morning. How the spirit tires in its toilsome way, wishing that repose might come quite soon. We long for a righted nature; for a vision of complete life; for a Divine Presence to beam upon us. What a moment that will be, when we first reach heaven! The soul embosomed in bliss; at home in the land of eternity; living with God.—*Exchange.*

NEW

AGRICULTURAL BOOKS.



IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY cuts in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $3 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully Illustrated.—Price.....$3 00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully Illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs .....Price $3 00

THE PARLOR GARDENER. A Treatise on In-door Plants. By Cornelia J. Randolph.....Price $1 00

No. 205 Montgomery Street, San Francisco.

Miscellany.

HOW THE DURATION OF A FLASH OF LIGHTNING IS MEASURED.

Scientific men assert that a flash of lightning does not endure for more than the millionth part of a second. How did they find this out? Obviously, not by any ordinary means, for such small portions of time are utterly beyond the cognizance of our senses, and even of our thoughts. Watches which mark quarter seconds are not uncommon. We have seen men try to count the beats of such a watch, and it is but rarely that we have met any one who could succeed. Not only could they not just count them aloud, but they could not even think of the number so as to keep a record of them in their minds. How, then, was is possible to measure a portion of time so much less in quantity?

Almost every boy has whirled a fiery brand in the air so as to make a "round robbin." How does it happen that such a moving *point* seems to make a fiery circle in the air? In this way: an impression make upon our sense of sight can not be instantaneously removed. It lasts for about one-second. Hence, if the moving point completes the circuit in less than the eighth of a second, it will make a new impression before the old one has expired; the path which it describes will be constantly visible, and the circle will appear complete. In the same way, if a wheel with many spokes be caused to revolve rapidly, the spokes become invisible and the wheel appears solid. But if the wheel were illuminated by a flash which did not last long enough for one spoke to take the place of another, the spokes would be visible, and the wheel would appear at rest.

A few years ago we saw such an experiment tried in Rochester, N. Y. The lecturer had a wheel, which was painted white, and on the white ground was painted a number of red rays. When whirled with a very moderate velocity, the wheel appeared of a dim, pinkish hue.—If, while thus revolving, it were illuminated by a flash from burning gunpowder, the spokes would not be visible, the flash of even the best gunpowder lasting longer than the time required for one spoke to take the place of another. But when, instead of gunpowder, fulminating mercury was used, the spokes were visible and the wheel appeared to stand still, so much more rapidly than gunpowder does fulminating mercury explode.

By driving the wheel a little faster, the flash from the fulminate failed to show the individual spokes; showing that even the flash from fulminating mercury lasted long enough to allow each spoke to move into the place of its predecessor before the impression made by the latter had faded from the retina.

A Leyden jar was now charged and discharged before the revolving wheel, and then the latter could not be driven so fast that the spokes would not be visible and the wheel appear to stand still. Now, if we knew the velocity of the wheel and the number of the spokes, it would be easy to tell the time required for one spoke to take the place of another. Suppose the wheel had 100 spokes, and moved at the rate of 1,000 revolutions per second; it is obvious that if the individual spokes be seen, the duration of the flash must be less than the one hundred thousandth part of a second.

Such is a rude outline of the method by which the duration of a flash of lightning is measured. Of course, the apparatus used in determining this duration is much more delicate than that which we have described, and which was used merely for illustration before a large audience. But the general principle is the same, and in this way it was determined that the duration of a flash of lightning is less than a millionth part of a second. Hence a carriage wheel in rapid motion, seen at night by means of a flash of lightning, appears at rest. The swiftest race-horse would not have time to make a perceptible movement of a muscle, but would appear as if carved in some inanimate material; and even the swiftest locomotive and its train would appear as if some icy hand had been laid on its energies.

That a flash of lightning endures for a certain period there can be no doubt, but this period, when compared with the duration of any mechanical operation, is infinitely small. Stand beside a target at which the bullets are being fired from a distance of say 200 yards, and first you will see the flash, after a short interval you will hear the wind of the bullet, and finally you will hear the report of the gun. In this case, you might see the flash, and afterwards be shot by the bullet. Indeed, so much time elapses between the flash and the arrival of the bullet, from a distance of 200 yards, that it would be impossible to hit an active man, at that distance, if there was a cover to which he could spring when he saw the gun discharged.

How different with lightning! There the flash and the stroke are simultaneous. If we *see* the flash we are safe. He that is killed by lightning never hears the thunder.—*Technologist.*

A PROSPEROUS MILITARY ACADEMY IN KENTUCKY.

There are now three hundred and fifty one students at the Virginia Military Institute, at Lexington, including representatives from the following states: 141 from Virginia, 10 from West Virginia, 12 from North Carolina, 17 from Tennessee, 21 from South Carolina, 19 from Georgia, 45 from Alabama, 7 from Florida, 19 from Mississippi, 15 from Louisiana, 12 from Texas, 5 from Arkansas, 13 from Maryland, 1 from New York, 3 from Missouri, 6 from Kentucky, 1 from the District of Columbia, and 1 from Wisconsin; 351.

[In the above we see the future leaders of the Army and Navy of this Great Republic, how all important it is that in this Academy there should be taught as a *first lesson*, and by instruction too, love and devotion to the Union.—ED. F.]

The mind swayed by unselfish considerations arises from innate conviction, which as always right.

Miscellaneous.

TO THE PUBLIC!!!

THE

SAN FRANCISCO

PACKAGE EXPRESS COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYING Passengers, Baggage, Packages, and Parcels from the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system presents itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and Boats and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. ackage Express Company,"

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed.

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success.

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Gomb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not those requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $2.50 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

San Francisco, June 18.

Our Grain Market may be said to be remarkably quiet. Very little movement in shipping abroad, although the prospect for foreign demand is believed to be good, even at present rates.

New Wheat came to market Tuesday from Antioch, being eight days earlier than ever before for several years. Thus Barley and Wheat are this year earlier in market, which we attribute entirely to a better system of early planting and better culture. The lot from Antioch of 2,000 sacks sold at 180 per cental, at this rate or $1.75, our farmers will do well to change their Crops for Gold, Improve their farms, pay up their bills, and thus help the traders get free from debt, and be free and independent farmers; however slack the export trade of the present market may be, it is in the power of the Farmers to move it, by selling readily, and making the trade, it will be better for them, better for ship owners, better for merchants better for all.

Owing to the busy work in harvesting, keeping our farmers at home, various kinds of produce does not come forward so heavily, nor so great in variety.

The Haying Season is finished, the crop good, well gathered and better cured—the Barley harvest will be a good one—quality improved, cleaner and better.

Oats have not been so largely cultivated, but a good crop of good Oats will be harvested—some of the new kinds—the Norway and the Excelsior, have been planted and promise well.

Potatoes, Corn, Beans, all promise heavy crops. In some places the late frost nipped the Potatoes, but our crop will count by millions.

We are confident we can say the harvest over our entire State will be a grand one, and a prosperous one for our farmers generally.

Retail Prices in the Fruit Market.

Our Fruit display the present week shows well.—Cherries lead off with their brilliant colors, Tartarians with their glossey, almost black skins, are beautiful—black hearts, Biggareaus, Oxhearts, and the Gov Woods show splendidly.

Currants now shown beat the world, nearly as large as Cherries. The crop this year of this fruit exceed any ever raised here.

Strawberries fall off in quantity, but the Lacondas begin to show fine as a late fruit and sell readily, but by reason of the abundance of other fruits, sell low.

Raspberries are plenty, Blackberries increasing, Gooseberries very plenty—so that our Market for small Fruits is admirably supplied.

Peaches made their first appearance this week at the modest rate of $1 each, sweet for the pocket, at $12, the dozen.

DAIRY—BUTTER, CHEESE, EGGS ETC.

The Dairy supply is good, the ruling rates low, as seen in report, Butter and Cheese comes to us from abroad, the latter sparingly—Eggs come in large quantities from Oregon, and affect the trade here considerably.

WOOL, TALLOW, HIDES ETC.

The Wool Market may be said t — on large clip has found ready buyers in Eastern Merchants who have come on a tour of pleasure, and they make their business trades, pay expences.

Our Wool clip has been very large—excellent, and we are glad to say for the sake of our wool and sheep men, it has brought good prices.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

Send Us Samples.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

Natural History.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

AGENTS! READ THIS!

WE WILL PAY AGENTS A SALARY OF $30 per week and expenses, or allow a commission, to sell our new and wonderful inventions. Address H. WAGNER & CO., Marshall Mich. 33,18.

COMMISSION SALES-ROOM — AND — Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandize for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE,

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.

PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do do	5 00
12	do	do do	3 00
50 Packets Good Selected			5 00
25	do	do do	3 00
12	do	do do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Narcissus, Tub-roses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds,
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND FIFTEEN.

New York, June 9th, 1870.

CHARLES FECHTER.

Ed., Cal. Farmer.

Probably no actor ever visiting America has called forth such diverse criticism as Charles Fechter. From the moment of his first appearance he has been both extravagantly praised and unequivocally condemned. Indorsed by such a master as Charles Dickens he deserved and received a generous welcome, but the opinion of Mr. Dickens has not been shared too a very great extent by those who acknowledge the genius of the great author. For instance, the *Tribune* is a profound admirer of the author of Edwin Drood, and in its columns have appeared some of the ablest analytical criticisms of Fechters performances. In these he has been denied the rank which is awarded to him by the indorsement, but is pronounced a master of stage business, and a gentleman of evident culture and industry. If New York is divided so curiously in opinion, it is not so in Boston. At the "Hub" he is almost unanimously acknowledged one of the greatest actors of the day. His friends there are enthusiastic and demonstrative, both in a public and private way.

Naturally I have been anxious to see and hear him, and at last have found an opportunity. Paris went wild over his representation of the Corsican Brothers. It is the last play in which he appears for the present in New York. Having read with care the various opinions of those who claim to be the best critics in the city, I made up my mind that I should not be among the ranks of his admirers.

The house was crowded on the night of my visit and the audience was one which would excite any artist to do his very best. At the end of the first act I was conquered and almost made myself conspicuous by the earnestness of my applause.—I consider Fechter a great actor. In the first place his personal appearance is particularly good, and he possesses a magnetic power that influences natures like my word—to a remarkable degree. I feel that he is carried away by his own ideal, and he arouses within me a corresponding enthusiasm, while of course he makes the brothers resemble each other in looks and manners, he represents with wonderful art their different natures.

As Louis, his studious mind, his vexed soul, his consuming love for the woman whom he adores, his anxiety when he hears that she is to make a public appearance with a man of infamous character, and his delight at her innocence, and as Fabien, an earnest and uncontrolled child of Nature dieto bed it is true by the presentment of impending evil, but courageous, hopeful and confident be pictures at once the likeness between them and their individual peculiarities. At times his acting is so passionate as to electrify his audience, where for instance he defies the boaster and leads the woman of whom he is so proud from the rendezvous into which she has been entrapped, and in the apparition and duel scenes he is unapproachable. I can conceive nothing finer, nothing more natural, and inasmuch as he portrays so faithfully human nature in its inspired moments, he deserves in my opinion every good word that has been spoken in his behalf by his illustrious friend.

I have not seen him in Hamlet, and I have not ventured to institute a comparison between the new star and Edwin Booth, but simply speak of him as he impressed me Because he satisfies me I do not value less, Davenport, Wallack or Booth, I do not wonder that Boston should have accepted at once the indorsement of Dickens, but I am more puzzled than ever to understand why there should be such a variance of opinion here, unless, indeed, it is because New York arrogates to herself a superiority, or because she cherishes that false patriotism which seeks to claim excellence for what and whom we call our own. Art belongs to the world, and the artist whether he be French, German, English or American, ought to be so knowledged at once generally. It ought to be sufficient that Nature has put her stamp of genius upon him. If appreciation, and the reward of popular favor were awarded Restori, Davison and Janauschek, I do not see any reason to withhold it from Charles Fechter. M. A. S.

ENQUIRIES ABOUT CALIFORNIA.

Aurora, Ill., June 15, 1870.

Editor California Farmer:

Sir—As I know of no one else in California to whom I can obtain the infomation I desire, I have taken the liberty to address you, and if I shall not encroach to much upon your time, I would ask of you the favor of informing me by what means I may become acquainted with the cultivation of silk in California. Some years ago during the *Morus Multicaulis* fever I obtained some knowledge of raising silk-worms in the State of New York—saw the cocoons brought to perfection—but as the climate was not favorable the experiment was given up. As I intend to make California my future home, and to give my attention to the cultivation of silk, I would like to know of the best locality—capital required, etc If you will do me the favor to tell me how I may receive such information I shall be very grateful.

Respectfully, J. E. Thorpe.

[Reply.]

While we shall always be very happy to answer any and all enquiries as far as possible, so as to induce the right kind of settlers to our State, the great and manifold Editorial duties that devolve upon us, will require us to be brief, and in the above letter, our best reply is "Prevost's Silk Culture" will furnish the writer of the above the essential information needed. Silk Culture with us is making rapid progress, and our Journal will steadily furnish evidences of its progress.

Macon, Ga., May 27, 1870.

To * * * *

I have heard such glowing accounts of the wonderful productions of the soil and climate of your State in the way of fruit and vegetables that I cannot help wishing for a garden in such a Paradise.

Does Asparagus grow as thriftily as other vegetables do in your State? and if so at what season of the year do you begin to cut it for the table and how long does it last? I should think that it would begin to grow soon after the rains set in in the Fall and continue to produce till the dry weather comes on—say from November to March.

I have over twenty acres of Asparagus here, and find it profitable to ship to New York early in the Spring. The earlier it comes the higher the price. But it is not usually fit to cut here till about the 20th of March and about the 20th of April it is sent from Norfolk, Va., to New York. It is also profitable to can. But on our thin soil it requires an immense amount of manure to give it a thrifty growth. I presume little or no manure would be required in your naturally rich lands for this purpose.

What is the price per ton freight on package of fruit from California to the Eastern cities by Rail? If you can conveniently answer these questions by letter you will greatly oblige me.

Is Asparagus cultivated extensively about San Francisco. * * * * *

[Asparagus is largely cultivated, and is in our Market in January and lasts half of the year.—It does require a rich soil—the freight would be $50 per ton hence to New York.—Ed. F.]

——— Ill., June 14th, 1870.

Editor California Farmer.

Dear Sir:—Will you please send me some specimen copies of your paper. As I am thinking of migrating to your State, and would like to learn something about the Farming,—or mode of Farming, and as your paper gives me the information I think it will I shall become a subscriber. I think you might get a great many subscribers East of the Rocky Mountains, as I think there will be a large emigration to California from the Eastern and Western States within the next two or three years, and most of them wish to learn more about California, as an Agricultural State, climate, etc.

There is talk now in this section, or neighborhood, of raising a Colony to Emigrate to California, and I believe it will be done, so do not be surprised if you hear of a whole train of cars coming loaded with "Suckers."

Yours truly. * * *

NEBRASKA STATE HORTICULTURAL SOCIETY.

First exhibition of the society, June 16, 1870.

We copy from the Omaha Journal, the following report of this Fair.

Yesterday the State Horticultural Society of Nebraska presented quite a fine display at the rooms fitted up for that purpose on Farnham street west of Fourteenth.

This display was very fine, and our gardeners were highly complimented by Mr. Wilder on their success in producing such fine specimens.

Shortly after three o'clock J. H. Masters, President, called the Society to orde, and introduced Colonel Marshall P. Wilder, of Boston, President of the American Pomological Association.

Colonel Wilder deemed it a great privilege to be present at the first meeting of the State Horticultural Society of Nebraska, and briefly referred to the first meeting of Horticulturists in the city of Boston, which, in the point of Vegetables, was not equal to that before him. In plants, however, it was superior. He congratulated the Society upon their display, and thought they had every reason to be proud of it. He came with his distinguished friends the representatives of the American Pomological Association, and were more for making observations than making speeches.—However, the Colonel would say that the fruits from Nebraska on exhibition at the last meeting of the association in Philadelphia, were more correctly marked than fruits often coming from older States. He expressed the desire that the society of Nebraska would come up at the next meeting of the American Association to be held at Richmond, through delegates. He was present to give a word of approbation and encouragement to a beginning so creditable.

Following Col. Wilder, Mr. P. Barry, of Rochester, N. Y., made a few remarks, in which he expressed his gratification at being present at the first meeting of the State Horticultural Society of Nebraska. He also was pleased with the display before him.

Mr. J. M. Clarke was the next gentleman called on, and although he did not make public speeches, a few words he would say in the way of a tribute to the taste of those who cultivated flowers and ornamented their windows with them. It was a measure of talent and indicative of the degree of civilization in that particular community where plants were so cultivated and appreciated.

Col. Wilder desired to make a few additional remarks in regard to the history of Pomology and notice the progress of her advance. He had traveled in Europe and had visited many of the great gardens there—seen their fruit, and yet he was satisfied that in New England there was better.—The Pomological Association held biennial meetings, and fruits that had no name when the first meeting was held were now named in great abundance.

Judge Mason followed by remarking there were things that would outlive us, and of these were associated efforts. He applied his idea to the society of Pomologists.

The point of correctness was discoursed upon by the Judge, agreeing with Colonel Wilder in his opinions upon the subject of correctness.

In this section the labor of the horticulturist was abundantly rewarded in view of the richness of the soil. We begin, said the Judge, where you of New England left off. We have the benefit of all your experience and experiments, and with them we have begun our work In conclusion he congratulated the Society upon its success, and augured a bright future.

Dr. Lowe stated that it had often been questioned whether apples would grow in this section, but gave it as his opinion, when the trees were older, they would bear in abundance. In confirmation of his belief, Mr. Barry stated that the finest orchard in the United States, was at Bloomfield, N. Y., consisting of one hundred acres, had not borne, although the trees were fully twelve years of age.

Col. Wilder then, in behalf of his associates, thanked the Society for the courtesies extended and withdrew, the distinguished Pomologists taking themselves to a carriage in waiting.

We notice by the published report that there was a large number of exhibitors, and a great interest manifested—the vegetables were particularly fine.

The Fruits were not extensive, but the display of Flowers were excellent—many from Council Bluffs—and from quite a distance.

The Exhibition of Vegetables was very large and exhibitors numerous—we have not space to name them.

It was fortunate, and very pleasant and agreeable that the Delegation of Horticulturists from Boston and New York, now with us in California, Col. Wilder and party were en route hither, and were enabled to visit that first opening.

May great success attend that Society.

It is a good sign to see a man wipe the perspiration from his brow—bad to see him wipe his lips when he comes out of a cellar.

EUROPEAN.

LETTER FROM HON ELIHU BURRITT.

The name of Elihu Burritt, the "Learned Blacksmith," must be familiar to all our readers who can go back to American History some thirty years ago when this distinguished Philanthropist was laboring in all the great Benevolent enterprises of those times, and the same spirit actuates him now in his life labors in Europe.

It was our great pleasure and happiness to be associated with him in the work of aiding the distressed of England, Ireland, and Scotland, as is alluded to in his very interesting letter, which has recalled one of the most interesting periods of our life, for it was by being most intimately associated in that great period of 1847 with him in London. And with such men also as the Venerable Dr. Chalmers of Scotland, Father Matthew of Ireland and others that led to the sending from the United States the famed war ships Jamestown, and Macedonian, and the Potomac, loaded with Breadstuff, to the then starving poor of England Ireland and Scotland.

We often refer to the deeply interesting letters we have in our possession of that eventful period and we sincerely hope our honored friend Elihu Burritt will publish his history of that period—We ourselves have often felt a strong desire to give a sketch of the fearful Famine of 1847, of which we witnessed so much in our visitations with the Commission, as we went through those sad places, the "Houses of the Homeless."

We herewith give the letter which we know will interest every benevolent heart, for ourselves we doubly rejoice to know that our publication in the Farmer of those grand documents of Washington has been so productive of good, it more than repays us for the cost of doing so.

We have the books alluded to so kindly sent us, they are to us above all price, and we regret our "Agricultural Department" refuses so generous an offer of those 500 copies. We shall endeavor to see they come to California if it is not too late to secure them

Hoping soon to hear again from our honored friend, we annex the letter.

International Land and Labour Agency,
Town Hall Chambers,
Birmingham, October 21, 1869.

Col. Warren, Editor of the Cal. Farmer.

My Dear Sir:—I thank you most heartily for all your kind and pleasant words in memory of our acquaintance and partnership of sympathy and effort in behalf of the starving Irish in 1847. No paragraph of my own life is more pleasant to me in remembrance than that joint effort in London, including our letter to Lord John Russell, asking him if the English Government would admit all gifts of food, or clothing, from the United States to the hungry millions of Ireland, duty free. I will hunt up my diary and send you some day a copy of its entries during the time of our association in that delightful work. Sometimes I am tempted to publish my entire private journal during the Irish Famine, including my Four Days in Skibbereen.

And now I want to thank you most sincerely for the letters of Washington and Sir John Sinclair, which appeared in your paper last year. I read them with great interest and admiration. I had no idea that he had ever written such a letter, and am confident it was never published in England before. I have, therefore, taken a liberty with it which I hope and believe you will not demur to.—As it gives such full, reliable and impartial information in regard to the most important characteristics of the different States of the Old Thirteen, especially in regard to comparative healthiness, I have published it in a little book, with an introduction and appendix by myself. Herewith I send you a copy of it, and hope you will believe that I have utilised the authority of Washington to some advantage to both countries. Of course, in so small a space I could only present the leading facts and features of each State and Territory but believe these will convey information which will be useful to an intending emigrant, in enabling him to decide upon the section in which he will make his future home, before leaving for America.

I also send you a copy of a little book, "The Life and Labors of Jonas Webb," taken from my "Walk from London to John O'Groats." I do not know how much the Farmers and Stock raisers of California have made themselves acquainted with the reputation and real worth of that noble hearted man, who honored the profession they love and follow. Feeling desirous that those who had only heard of him and admired him as a most eminent trader of the finest blood sheep and cattle, should know what he was as a man, in his private, inner life, I have had my chapter upon him republished from the volume refered to, and brought out at my own expense in a shilling book, with a portrait taken from a photograph. I am very anxious that American Farmers and Stock-raisers should know of Jonas Webb what this little book contains; and I offered to send 500 copies to our Agricultural Bureau at Washington for gratuitous distribution among them, if the Department would merely pay the freight and cost of circulation.—But this offer was declined; and as each copy sent by mail is charged 6 cents postage, I cannot afford to send money to the United States, as every copy would cost me for printing and postage, 25 cents.

Our "International Land and Labor Agency," has now an amount of confidence we never expected in so short a time, thanks to the favorable notice of the Press in both countries. We have already over 1000 farms committed to us for sale to english purchasers, from Maine to California, from $500, to $50,000 in price. We are also receiving applications for English house servants, from both of those States simultaneously.

Ever and Truly Yours

Elihu Burritt.

Home Correspondence.

Minerva Glen, May 29th, 1870.

Editor California Farmer:

In keeping time with the advancing season, vegetation makes rapid strides towards maturity. In properly piloting the latter, and collecting its showers of lusciousness my every moment has been completely occupied. This is my excuse for negligence. Is it not a good one? Is there anything within this "vale of tears" that condoces more towards raising the spirits and destroying feelings of melancholy, than the pursuit of Horticulture, and in particular when we reap the full rewards of all our labors. There is an inexpressable happiness to be found in the open fields, the orchards, the vineyards, the gardens and the meadows. When we realize that with our own hands we planted and tilled, and brought into a state of beauty our surroundings. To walk amid fair green trees on a calm bright day and listen to the rustling of their leaves, fanned in motion by soft breezes from the south, and freely breathe the purest mountain air is joy. But this is not fulfilling the promise in my last letter, to speak about the diseases of the Grape.

MILDEW.

All that is really necessary to be said about this thing I see you have spoken of fully in the two last numbers of the Farmer. The last is entirely correct as far as my knowledge of applying the sulphur goes.

There is another disease which has troubled the Grapes in this county last season, which as yet have baffled all remedies, and may yet prove to be a much more formidable and difficult disease to meet than mildew or anything else of the kind, it is called

BRIGHT.

It generally makes its appearance just before the buds burst into bloom, turning them black and causing them to shrivel up and fall off, leaving, perhaps, one or two small inperfect berries where a full cluster should have been. I know of one vineyard of one hundred acres, which set no fruit last season on account of blight. It is claimed that a bad atmosphere is the cause.

If this is, so why is it that among a thousand vines of one variety we find but half a dozen thus affected. It may be an insect. Will some of our scientific vineculturists tell people what it is, and how to cure it?

Since writing the above I have read an article in your Horticultural column from the Utah *Pomologist*, about the so-called Fiber Zago Grape. My experience with the grape agrees with that statement exactly except the name. We call it the "White Malmsey" here. I have plenty of the latter, and have compared them with some received directly from Mr. Bugbey, they are one and the same, and as to their habits the Pomologist is right. They will not make a good raisin, indeed, they are about the poorest grape for that purpose that we could possible use. The "White Malaga" is of a different grape altogter, and is the true Spanish Raisin Grape, but does not succeed well in that respect in this country.

The "White Muscat de Alexandre" is the only grape that will make a good raisin in our State. The soil for the last named must be a mixture of sand and gravel. The locality must be free from late spring or early fall frosts, nor can it stand much foggy weather. Everything favorable it makes an excellent raisin. More anon.

Yours, A. S.

WAIT FOR THE WAGGON.

We have always and ever been the friend of "Home manufactures," and are still, we see however that recently a large number of our best and most influential Farmers, and others have been testing by comparison, the value of Home made and those Imported, and that by reason of *better seasoned wood*, the famous Michigan Waggon takes the lead of all others. We are always open to conviction and therefore we *must* take the word of our Farmers *who use Waggons*, as to the true merit of Waggons when tried.

We call special attention to the Circular and Certificates as to the Excellent Waggons sold by Messrs. J. D. Arthur and Son.

Agriculture.

RULES FOR THE FARMER.

Soon as the East is streaked with gray,
Proclaiming the approach of day,
Rise from your bed and bend the knees
To Him who every off'ring sees.

Devoutly ask His aid, to guide
Through every ill that may betide
Your day of toil. The need will come
Before the setting of the sun.

Now ring the bell, as sound of horn,
In freedom's days, cannot be borne.
It speaks of Gurth, who wore a collar
And never had a single dollar.

And, though he has no dollar still,
He scorns to bow to master's will,
And only waits for you to speak
That he the opposite may seek.

Be patient, and pursue the rule
That best succeeds with every mule;
If you wish to ride to town,
Be sure to turn his head around.

Break deep your land! Be very sure
To feed it with the best manure!
Four feet apart for cotton rows,
In six you'll find that corn best grows.

Then, crowd your cotton in the drill,
Two stalks, not more, in ev'ry hill.
Of Oxford Dickson get your seed,
Then work it right, and you'll succeed.

Two and a half for corn will do,
Though some prefer it only two.
The land well broke, the Dickson sweep
Of grass and weeds quite clean must keep.

Cotton and corn when very young,
Had best be plow'd with the bull tongue.
Then, the sweep must take the field,
And to no circumstances yield.

In chopping out, be close at hand,
Or you will fail to get a stand.
Failing in this you fail in all!—
May count at once your yield as small.

I judge you'll think this quite enough
Of such homely and homespun stuff;
But doggerel sometimes plants a thought
When prose would labor all for nought.

[SEMEX, in *Southern Cultivator*.

WRITE FOR THE FARMER.

Our readers must have been interested in the Letter we published in a recent number, upon Summer Fallow and Irrigation, and we hope many such will come to us from all sources, for they will accomplish great good for all.

We herewith give a short article from the *Rural Southerner*, published at Athens, Georgia, upon the subject of Farmers writing for their own Journals, and the great benefit which will result from it as stated in our excellent letter from Anaheim in our issue of the 9th inst., which is here again set forth happily.

We sincerely hope our Farmers from every portion of our great State will write us freely—they will then see how much good they can do.

PREJUDICE AGAINST BOOK FARMING—ADVANTAGES OF AGRICULTURAL JOURNALS, ETC.

The wiser men grow, the more they see the necessity of study and the importance of adding to their stock of knowledge. A great many people are harping on theoretical knowledge, ridiculing at its insignificance, and boasting on their practical attainments. They do not seem to think that a theory is the result established by years of patient investigation, experiments and careful painstaking of some philanthropical soul, and made public property for the use and behoof of mankind generally. Then dogmatic individuals, complimenting themselves for their superiority, thanking God that they are not as other men, hoarding up their knowledge for private use, to make better crops, or openly ridiculing those who are slower in acquiring experience or practical knowledge, did not know that were they to write out their modes of cultivation and pet ideas, which really are scientific and theoretical, many people as ignorant as themselves would sneer at it as impracticable, useless and perhaps foolish.

Such cases, common some years since, are now of rare occurrence. The desire to exchange useful information and hints pertaining to Agriculture, which Webster says "feeds us, to a great extent clothes us, and without which we could not have manufactures nor commerce, things which stand together, yet stand like pillars, the largest in the centre, which largest is Agriculture," has been the means of establishing Journals of Agriculture, gems of beauty, yet monuments of utility. These messengers bearing within their folds truths precious—theoretical, yet practical—are now disseminated and penetrate thousands of households, which ten years ago would have scoffed at their teachings and laughed to scorn the idea of "book farming."

Now, as the general accredited object of the Agricultural Journal is to disseminate practical knowledge, enabling a man who stays at home to become acquainted with the doings and progressions made all over the world, does it not become the duty of each farmer to aid in some manner, this laudable motive?

Our farmers are too modest as a general thing; they think that certainly all the readers of their paper know as much and more than he does, so it is unnecessary for him to attempt to teach the public. This is wrong. No farmer, however humble, but has experimented or knows some interesting fact which he should write out briefly and forward to some Agricultural Editor. I have made a few experiments which, when I find time, I will send you, Mr. Editor, and I want all, or as many as can do so, who are subscribers to imitate my example. PALMER.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWENTY-THREE.

I have had so little experience in Tree Planting that I should have preferred to say no more about it; but letters that have reached me imply that the ignorance of others is even denser than mine. For the sake of those only who are conscious that they know nothing, yet are not unwilling to learn, I venture a few timid suggestions with regard to Tree Planting.

I. Ten or twelve years ago, I bought a pound or more of Locust seed rather late in the Spring, scalded it by plunging at night—full the little cotton bag which held it into a pot of boiling water, and letting the seed steep and steam in the bag till next morning, when the seed was planted in rows in a newly broken bit of poor old pasture land.—This was a mistake: I should have given that seed the richest available spot in my garden, to say nothing of planting it as early as April 20th. My locusts came up slowly and grew feebly that year, not to speak of the many seeds that did not sprout at all. Still, many came up and survived, and my place is this day the richer for them. It might have been still richer had I seasonably known more.

II. What I would now advise as to Locust and most other trees is that the best seed be procured in the Fall, or so soon as it drops from the tree; that part of it be sown in drills, two feet apart, with two inches between seeds in the drills, and that the richest of dry, warm garden soil be devoted to this purpose. Fill a large box with rich loam, stir four ounces of seed into this, and set the box in a cool cellar where frost does not enter, and here let it remain till April; then take out the seed and earth together, and sow in drills as above. If some one who cuts Locust during the Winter or Spring will allow you to trace the smaller surface roots from the new made stumps and cut or dig them up, cut fifty or a hundred pieces of root the size of your finger each two feet long, and plant these, about May 1, in the places where you want Locusts to come forward most rapidly. Some of them may not grow, but I think many will; and, from all these sources, I judge that you will obtain a good supply of young trees. Let those you start from the seed get two years growth before you take them up and set them where you want trees, whether in your present woods, in rugged, rocky pastures, on the sides of steep ravines, or around your buildings. You cannot fail to obtain *some* trees if you follow these directions.

III. Begin early this Fall to gather Chestnuts, Hickory Nuts, Walnuts, White Oak Acorns, etc., to plant. Select the largest and finest nuts, giving the preference to those which ripen and fall earliest. Keep them in cool, damp earth in some barn or cellar where rats and mice cannot reach them, and persist in collecting till December.—Then plant a part in your garden or in any rich ground where they are not likely to be disturbed; letting the residue remain in the boxes of moist earth where you first placed them, till Spring, then plant these, like the former, in rows two feet apart with six inches between seed and seed in each row and give the rows careful culture for two years; after which, set them where you wish them to grow.

I venture to suggest that he who has a rugged, stoney hill or other lot which he wishes to surrender to forest should plow it, if it can be plowed, next September or October; if too rocky to be even imperfectly plowed, dig up the earth with pick and spade, and sow it thickly with hickory nuts, walnuts, chestnuts, locust and other tree seeds, expecting that some will be dug up and carried off by squirrels, etc., & that others will not fail to germinate. Go over it with hoes the ensuing June or July, killing all weeds and other infestations; and, nearly a year later, repeat the operation, taking up young trees from your garden or nursery, and filling them in wherever there is room. Plant thickly in order to force an upward rather than a scraggy growth; and so that you may begin to cut the superfluous saplings for bean poles, hoop poles, etc., three or four years thereafter. Cut late in Winter or early in spring, so that the stumps will each throw up two or more shoots or sprouts, which usually grow much faster than the original tree did. And the process of thinning may thus be continued indefinitely, while the choicer trees are allowed to attain their stateliest proportions. And thus a rocky, sterile hillside or knoll may be made to yield a crop annually after the first two or three years from planting; while growing trees of decided value. I judge that almost any land within fifty miles of a great city and not more than two miles from a railroad depot or from navigable water may thus be made to earn a good interest on $100 per acre, after meeting all the costs of breaking up and planting. I confidently assert that many thousands of sterile rocky acres, which now yield less than $10 per acre annually in pasturage, would net at least double that sum to the owner if wisely devoted to forest trees.

I have a hearty love of forests. They proffer gentle companionship to the thoughtful and rest to the overworked, fevered brain. Our streams will be fuller and less capricious, our gales less destructive, our climate less capricious, when we shall have reclothed our rugged slopes and rocky crests with trees. Timber grows yearly scarcer and dearer, when it ought to be becoming more plentiful and accessible, and would be if we devoted to trees all the land which we cultivate at a loss or fail to cultivate at all. Let our boys be incited to gather seeds and plant nurseries; let young trees be bought by the thousand where they now are by the dozen, and let us all coöperate in covering our unsightly rocks and making glad our waste places by a superabundance of choice, thrifty, healthy trees.

A gentleman asked a little girl what it was that made a person feel so when another tickled him. "I suppose it is the laugh creeping over him!" was the instant reply.

SPECIAL PREMIUM TO STOCK RAISERS.

WITH a desire to awaken a greater interest among our STOCK RAISERS, and to enlist them in STUDY of all the new things in STOCK RAISING, and to induce them to read and see what is being done in other States in STOCK RAISING,

WE PROPOSE

TO PRESENT to all who shall subscribe for our NEW VOLUME that commences in JULY, a copy of the STOCK JOURNAL, as a Premium,

FREE FOR ONE YEAR

to all who send us THEIR NAMES as subscribers to THE CALIFORNIA FARMER.

WE will send the STOCK JOURNAL from June 1st, and also send them the FARMER for one year, for the Subscription of $5,00.

WARREN & CO., Farmer Office.

TO CORRESPONDENTS.

THE TRUE NAME.

We frequently receive letters of enquiry, also of suggestions—often letters containing criticisms of writers in our Journal, from persons who are entire strangers to us, letters often personal in their expressions and criticisms. Such letters we cannot publish or reply to—such go into the waste bag. Writers should give us their full names and residence, so that we may know all is right—their names will not be used against their wish, yet we must know the writer, else we shall not publish them.

CURE FOR ROUP IN CHICKENS.

A gentlemen who had several valuable fowls afflicted with roup asked a well known chicken fancier of this city for a remedy. He was informed that the most effectual cure was to cut off the heads of the fowls as soon as the disease made its appearance. Unwilling to lose valuable fowls without making an effort to save them, he commenced to treat them after a method of his own. He placed his diseased fowls in a perfectly dry room, bathed their heads with kerosine oil and rubbed their bills inside with a mixture of slum and grease. He fed them only on Indian meal and boiled potatoes well-peppered with cayenne, no hard food whatever being allowed them. With this treatment they commenced to improve, and in from a week to ten day had entirely recovered. The disease has seldom failed to succumb to this treatment. On an average, only about one chicken in six died.—*Germantown Telegraph.*

DOMESTIC ECONOMY.

Extravagant parents must expect to have extravagant children, and when masters and mistresses do not economize, they can scarcely expect the servants to do so.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK.

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. No description of feed so greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or wool growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it thoroughly, ONE pound is pronounced to be equal to two pounds of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1865, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Indian Corn Meal, 11 per cent; Barley Meal, 13 per cent; Oat Meal, 18 per cent; Oil Cake Meal, 23 2-100 per cent. For life-sustaining properties to all stock are said to sudden changes of weather or over-driving it has no equal

For MILCH COWS particularly valuable, increasing the quantity of milk and enriching its quality to a far greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other food; generally mixed with the meal of bran, slops, roots, or cut feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other food—the beef always being more tender and juicy and of a much finer quality than when fattened on any other feed and no feed known will so quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes their health, and is especially valuable for them when chilled or injured from over-driving. It is one of the best remedies known for Horses subject to the Heaves or Rheumatism, and greatly increases the cleanliness and evenness and glossiness of the hair.

FOR SHEEP there is no article of food known that produces such fine mutton or so promotes the growth of wool. A small quantity given to chilled Cattle or Sheep will keep them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $42 per ton, gold, at $50 per ton in England, where it has been proven for a long time to be in every respect the most profitable feed known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those on this coast by whom it has been thoroughly tested, has induced us to increase our facilities for its manufacture, and we are now fully prepared to furnish it in quantities as may be desired. For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

CAST-STEEL DAIRY KNIVES

WE HAVE RECEIVED INVOICES OF THE CELEBRATED

Cast-Steel Dairy Knives,

Manufactured by O. G. Young of New York. We have them of all sizes, from those of FOUR BLADES to cut FIFTEEN INCHES, up to THIRTEEN BLADES to cut TWENTY INCHES.

These Knives are of very great advantage to Dairymen, and are worthy their attention.

For sale by WARREN & CO.,
"Farmer Office," 320 Clay Street, up stairs

DOMESTIC POULTRY—PURE BLOOD

Pigs, Dogs, Etc.

THOSE who desire to secure Pure Stock of Domestic Poultry are invited to visit our Poultry Yards, and see the varieties for themselves.

We have the following, raised by our ourselves, and guteed Pure Fowls:

LIGHT BRAHMAS, WHITE LEGHORNS, DARK BRAHMAS, BUFF COCHINS,

—ALSO—

Aylesbury Ducks---Bronze Turkeys.

These Ducks and Turkeys are New Varieties of great excellence. The Turkeys are said to weigh 20 or 30 pounds each.

We have perfected arrangements abroad, so that we can supply any breed of Fowls, Pigeons, Rabbits, Dogs, Pigs, etc., or any kind of small Stock to be procured in the old States or Europe, and supply them at lowest terms.

Those interested in Stock that desire to procure or gain information about Domestic Ale, should

Apply to

NICHOLS & WILLARD,
FRUIT VALE AVENUE,
BROOKLYN, CAL.

TRUE'S IMPROVED POTATO PLANTER.

This is, undoubtedly, one of the most valuable Machines adapted to Agricultural purposes ever introduced.

It Saves the Labor of 12 Men in Planting Time.

Makes its own furrow, cuts the potato in such choice slices as the farmer may prefer; drops these pieces with the most perfect regularity, and covers them perfectly, and does all this as fast as a horse can walk over the ground that can be plowed

No intelligent farmer can fail to see that an instrument with which one man can, with the aid of a horse, plant six acres of potatos in a day, is of inestimable value, because the days in which PLANTING can properly be done are very few, while he has all SUMMER and FALL in which to cultivate and dig

This distinguishes the POTATO PLANTER from all other machines. It affords its aid "in the very hurry of time," and gives leisure to its owner for attention to his other spring work, which would otherwise either overwork him or be left undone.

The undersigned have the sale of this Grand Labor Saving Implement for the Pacific Coast.

We shall also sell "County Rights" for this implement, and a good Mechanic can make a fortune with it.

Particulars and Catalogues can be had at our office.

AGRICULTURAL COLLEGE REPORTS.

We are desirous of procuring from the several AGRICULTURAL COLLEGES of our country a list of all their officers, the Professors, Teachers and Regents of their condition and progress, and we shall be greatly indebted to the Secretaries of these institutions if they will aid us in collecting a history of their *Rise and Progress*. We will cheerfully reciprocate the favor in any way in our power.

A GRAND POMOLOGICAL EXCURSION

A party of distinguished pomologists will arrive here from the East this evening and remain over Sunday in our city. Among them will be the veteran Pomologist, Col. Marshal P. Wilder of Boston, Mr. Downing of Newburg and others, distinguished in pomology and horticultural science. This party will proceed directly by rail over the Western Plains and Rocky Mountains to California, where they will spend a portion of the summer in recreation and in examining the fruits and flowers of the Pacific States.

Our townsmen, Messrs. Ellwanger & Barry, are with the party here and will participate in the pleasures of the excursion. These gentlemen expect to be absent about two months and it will be strange indeed, if the visit is not productive of much good to the eastern cultivators of fruits and flowers. This will be the first occasion on which a considerable number of practical and scientific pomologists have undertaken to make a critical and comparative examination of the products of the rich vine and fruit growing region of the far west.

The party will go with the best wishes of all that they may find the excursion pleasant as well as profitable to the science to which they have devoted such a large portion of their lives.

[*Rochester Exchange.*

GEN. WILDER AND PARTY AT OMAHA.

We clip the following from the Omaha *Herald* of the 16th:

Marshall P. Wilder, of Boston, President of the American Pomological Society, Charles Downing, of New York city, and Patrick Barry, of the firm of Ellwanger & Barry, the celebrated horticulturists of Rochester, N. Y., are in the city, and go west to San Francisco, on the Pullman Hotel train, to day. They are delegates of the American Pomological Society, chosen to visit the country from ocean to ocean.

TROPICAL CLIMBING PLANTS.

Mr. Paul Levy, has published observations on the climbing plants of Nicaragua, chiefly of the genus *Bignonia* They possess such extraordinary vitality that they can be completely destroyed only by fire. They select with a decided preference certain trees. Refusing to climb others, they run along the ground considerable distances to those which they choose, and cling to them with great tenacity. In every instance observed, the climbers turned from left to right.—*New Orleans Cotton-Land Weekly.*

FRUIT MARKET OF NEW ORLEANS.

Our Fruit Market is now quite well supplied in the way of Bananas, Pine-apples, Plantains, Lemons, Oranges, Mammee Apples, Mangoes, and other West India productions, and we notice fair supplies of Strawberries, a few Black Cap Raspberries, (a novelty in this market,) Wild Plums, ripe Figs, and other domestic fruit. Peaches, such as the "May Beauty," "Honey," etc., made their appearance a few days ago, at rather tall figures. They will be more plentiful and cheap, soon.—[*The South-Land*, June 11th.

HUDSON RIVER.

The Hudson River was called by its discoverer, "the Great River of the Mountains." Subsequently it was styled "The Nashua," after the ruling family of Holland; then "The Mauritius," from Prince Maurice. Later, this beautiful stream was called the "North River," in distinction from the Delaware, known among the Dutch as the "South River." It was not until after 1664 that the name Hudson was given by the English. Many curious names were applied to it by the Indians who lived upon its banks.

☞ An experienced old gentlemen says that all that is necessary in the enjoyment of love or marriage is confidence.

THE NEW OATS.

The finest NORWAY and EXCELSIOR OATS that have excited so much interest in all the old States, have thus far proved more than was represented of them.

We have just received a small invoice of these wonderful Oats, with some other new kind of cereals, and although late for the general planting they can be planted on our river alluvial soil, or in the mountain country and the seed thus secured; they will do on our Tule land also even now.

For Sale at the FARMER OFFICE.

SEEDS, PLANTS, ETC., BY MAIL.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essays of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and rose cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
Farmer Office.

JUST RECEIVED—GOOD THINGS.

WE have received the following, which are among the good and rare things needed.

Fresh Cranberry Plants
(The Large Bell Variety.)
Ramie Seed, Fresh,
WATERMELON CANTELOUPE,
AND
MUSKMELLON SEEDS,
EXTRA QUALITIES,)
Flower Seeds, Choice,
MIXED LAWN-GRASS, ETC.
For sale at the "FARMER" OFFICE.

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO ENJOY IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTORS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt

WARREN & CO., Eds. and Prop's.

20,000 NEWSPAPERS.

We have TWENTY THOUSAND Newspapers—Newspapers of the largest size among our Exchanges, suitable for WRAPPING PAPER for Dry Goods, Clothing, etc.

—ALSO—

TEN THOUSAND

Of the best Agricultural Papers known, comprising our various Agricultural Exchanges from all the Eastern States and Europe. Farmers who would like valuable reading matter, which contain choice Essays and Letters on Agricultural matters, can have these at low rates by the 100. Apply at FARMER OFFICE.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING JUNE, 30, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in each issue to our *Journal*, to which we would direct their *special* attention.]

NEXT ISSUE.

We have from our valued correspondent "Agnes" a valuable sketch, "Stones for Bread," which will be read with interest.

We have "Walking Around," No. 3, from "Philmore," with many Letters crowded out *this* week together with several Letters and Essays of value.

Letters and Parcels Received.—We must ask a little indulgence from our Correspondence for delays, as our absence from the office was imperative while engaged to pay due respect to the Honored Representatives of Horticulture from abroad.

APPLES FROM NEBRASKA.

We are indebted to Hon. M. P. Wilder, for several Apples of last years growth which were shown at the Nebraska State Horticultural Society at Omaha, reported in our columns. Among the samples are the "Red wine Sap," and the white "May Apple." We return our sincere thanks to the Donor for these fine specimens—they can be seen at our office.

BOOKS FROM ENGLAND.

We return thanks to Hon. Elihu Burritt of Birmingham, for a copy of "Washingtons Words," and Life of Jonas Webb, as mentioned in his letter to us, as seen in our columns—we shall copy from the Life of Jonas Webb as a most interesting Volume.

"*Nip Out.*"—We notice the "San Jose *Mercury*" which claims to be just in the matter of credit—does not hesitate to "nip out" an article on *Vineyards* and not give the *usual credit*. Where did the *Mercury* find the sentence? Why not publish it all and give due credit. Others have nipped the same article.

INSURANCE, SAFE INSURANCE

So you are in favor of rich monied Institutions are you? You go for the wealthy Corporations do you, Colonel? I see you speak very highly of the PACIFIC INSURANCE COMPANY!

These were the words which were addressed to us by a person canvassing for another Institution of the same business, to which we promptly answered, as follows:

Yes, we *do* go for rich and heavy monied Institutions *always* when they are engaged in the business of INSURANCE, for then we can safely recomend our readers to be insured there, for it is their *great wealth* that makes them solid Institutions, and that *wealth* is a *double insurance*, that their Policy will be paid, and it is by the wise management of that wealth accumulated by good judgment, that makes us speak strongly in favor of the PACIFIC INSURANCE COMPANY of this City, as a safe company under all circumstances.

Our interrogation bade us a very good morning.

EASY BEDS, SOUND SLEEP, LONG LIFE.

How few pay due attention to the bed they sleep on, or care about a good sound sleep—and some do not care whether they live a long or short life, but the bed has much to do with it. Our own duties do not allow us much sleep, rarely *four hours*, yet that sleep is sound and refreshing—no troubles in sleep—but pleasant Dreams. Let all who desire comfort look to the Bed question, and we can refer them with pleasure to the New York Bedding Warehouse that is particularly described in our advertising columns.

YEAST POWDERS.

A special attention is now called in our advertising column to the highly popular "Donolly's Yeast Powders," which, as will be seen, have been greatly reduced in price. As these Powders stand a No. 1 before the community, this reduction in price must increase the sale of them largely

FOURTH OF JULY—FREEDOMS DAY.

Let the loudest cannon roar
Let them sound from shore to shore,
Throw forth "our flag," and wave it high
With its Stars and Stripes against the sky,
Tis FREEDOMS FLAG to be unfurled,
Till Liberty shall crown the world.

Before another issue of our Journal, this glorious day will have been ushered in.

Monday next is Freedoms Day.

We rejoice to know our glorious day of jubilee will be observed with the right spirit over our land. With the return of this glorious day, let the spirit of "Peace on Earth" and "Good will to man" be in the hearts of all our people, let all animosites of the past be buried with the days coming. Let party strife, religious bigotry and all evil go down and be buried with the "Sabbath Prayers" of the third day of July, and let the Sun rise of the "Fourth of July" not for the East or West, the North or South only, but for our whole Union, a band of United Freemen. Then will the spirit of Freedom take new and deeper root, and our Glorious Union advance to a more glorious Freedom and Prosperity than ever before known, and we shall be worthy as a people, to have it said of our country

"The Land of the Free
And the Home of the Brave."

THE SEASONS, CROPS, &c.

This is the Sunlight of the Year, the "Golden Grain" is being harvested, the scent of the "Hay Fields" is still in the winds, and its sweet breath comes to us with refreshing as the eye is gladdened by the abundance that the teeming earth is sending to our garners—Grain, Wine, and Oil, Fruits, Flowers and fragrant wind all conspiring to make the heart glad, and to awaken it to songs of praise and to anksgivings so abundantly showered upon us in this "Land of Plenty."

THERE IS NOTHING LIKE IT ON EARTH.

These words of truth fell from the lips of the venerable President Wilder now with us, as he was returning from a visit to San Jose and Santa Clara with his friends. They also fell of joy and gladness at what they had seen in the Orchards and Vineyards they had recently explored, were bearing in their hands great branches of fruit, like the Patriarchs who returned to Moses telling of the wondrous country beyond the mountains, and we often think it was over the *Sierra's* the early pioneers of Moses came, and where in our rich vallies they gathered the "Great Bunches of Grapes," recorded in Sacred History.

But our Season, now of which we speak, may truly be called one of great abundance. This is what we have said in this Journal from the beginning of the season, even while the press generally were crying out Drouth, Short Crops, Loss of Harvest, &c. We here repeat, our Harvest will be large in every class; our grain crop will be large, even beyond, in the total, the most sanguine expectations; and we here ask our *Farmers* to consider well, especially our grain-growers to consider well the matter of "Holding on" or *selling* their grain now. It is a serious question to them, in many cases it is "Life or Death" *pecuniarily*, to them whether they "make or break," and this turns, on *holding* or *selling*.

We give them reliable facts. A *speculation* was started in Europe, and wheat made a large rise, it was based on the condition of the "Crops in France." *Short crop* was the cry, but alas for the speculators, France will have a full crop, a large crop, and wheat has fallen heavily, and will fall *still lower*, and European speculators *have fallen too*.

The large fall in wheat in Europe, and the decline of wheat in New York of 12 cents, has induced our neighbor of the *Alta* to give a wise hint to our Farmers, it says:—

"This turn in affairs is an additional hint to our Farmers and dealers to *sell* when the chance offers." Wise monitor! is it not always best for our Farmers to sell when the chance offers? And would they not always be better off if they should sell at harvest?

Wheat, Barley, Oats and Hay will be largely in excess of general expectation, and *we* know that *our producers* that sell their produce and *improve* with their means after "getting out of debt," will be the wiser, better, and happier for it. Farming when carried on correctly, intelligently, and with an industrous spirit, is the *best* the *healthiest*, and the *happiest* pursuit, and the most profitable of any country in the world here in California.

Our Season has been a good one, more winds than usual for May and June, but a good and prosperous Season with all.

The Fruit Season is now in its feast time, we mean our small fruits, they are abundant and very splendid.

Cherries surpass all former years—sample fruit Lewellen Orchard, San Lorenzo have exceeded all

Currants surpass all former years; Raspberries, Blackberries and Gooseberries abundant, and of superior quality—prices reasonable for California.

Our Vegetables excel any other Market of the world, by more than fifty per cent in productiveness per acre, and in excellence in quality also.

IT WILL BE A YEAR OF ABUNDANCE.

A man of business must put up with many affronts if he loves his own quiet.

To a generous spirit it is as hard to beg as it is harsh to be denied.

PRESIDENT WILDER AND FRIENDS IN CALIFORNIA.

No Editorial that we have ever penned during our long Editorial labors of sixteen and a half years has afforded us more real heartfelt pleasure and joy than to write the words at the head of this column; which announces the arrival of this noble Father of Horticulture and his co-workers of our Science, to the "Land of Gold," the Sunny Side of our Glorious Union.

In the last number of the FARMER we announced the coming of these Pioneers of Science, and briefly sketched their field of labors of the past. They are with us now, and we will try to sketch the happy event of their arrival, which we feel will be one of great good to our State as well as one of deep interest and pleasure to them.

MEETING ON THE MOUNTAINS.

The announcement that President Wilder was to visit our State, and the letters received from him, made it a duty on our part, as the early advocate of Agriculture and Horticulture here, and the representative Journal of this interest to gather a few friends and go out to meet and welcome this apostle of Horticulture and his friends. To this end a few quietly rallied and went forth to the summit of the Sierras, as the most fitting place for so eventful a meeting. There as the sun was rising and gilding these snow-clad mountains, there were met and there hands were clasped in a fraternal greeting. This was a meeting that will long be remembered by all. It was one full of great import, as tending to bring to our midst those who would be the true heralds of our State in her vast resources.

Our delegation, Professor Carr, of the University of California, and his Lady; A. S. Hallidie, Esq., President of the Mechanics Institute, and his Lady; O. W. Shaw, Esq., President of the Fruit Growers' Association, and our humble self, were at the Summit Hotel, and were called at early light and waited the coming of the Pullman Palace Cars that bore these friends to this new prospect of *Horticultural Life* to them. It was just as the sun gilded the peaks of the mountains that the cars came rolling on, and there, upon the Summit, this happy meeting was held, to us one of great moment, for we *met one*, President Wilder, to whom we had ever looked up to, as the True Father and Pioneer of the grand science of Horticulture and Floriculture, that has so beautified and blessed the earth, and whose venerable features lightly touched by time, we had not seen for twenty-one years and a half, to us

TUESDAY, JUNE 27, 1870.

will ever be a *red letter* day. The other members of the party the friends of President Wilder, are known to science, but it was long years of absence from the East that gave to this meeting a feeling that it was a *Holocaust* of the soul to pay tribute to a Leader of Science and his noble coworkers.

The meeting and greetings and presentations of friends was most pleasant and happy and will never be forgotten.

The morning and early portion of the day with us was spent in *living over the past*. We saw that our delegation was also enjoying the hours, as these welcome friends were also feasting upon the grand scenery over which we were passing as we descended from the Summit, via "Cape Horn," and the other wonderful views along this "Great Highway" of a world's traffic.

To our friends this grand passage over these mountains, was like a new vision to the mind and soul—a vision worth a life to see. After these scenes were over and the Valley of the Sacramento was made, our delegation had a table spread in the Dining Car, and there we held a social gathering, that we might have a closer communion than in the bustle of the traveling cars; and there around the festive board in social converse amid Fruit and Flowers and the generous Wine contributed for the occasion, heart met heart, in kindly greetings.

The meeting around the social Board was a happy one, and as it devolved upon the Editor of this Journal to open the meeting, one in which we felt it an honor and pleasure of forming for the occasion, it also became our duty to address our Honored Guests and his friends with the words of

WELCOME TO CALIFORNIA.

Our words were few but the heart was full. We had no written or prepared words, they came for the moment, and as we addressed President Wilder and his friends, we felt the beautiful words of the Poetess "Amelia" best fitted for the occasion, and while we in the name of our delegation from California, and the Cultivators of the soil, Her Horticulturists, Florists and her Citizens, we bade them welcome, we felt as we saw one Giant like a Father among his co-workers in science around him the truth of these words.

"There are moments I think when the spirit receives
Whole volumes of thought on its unwritten leaves,
Where the folds of the Heart in a moment unclose
Like the innermost leaves round the heart of a Rose"

So we felt as we addressed them.

We welcome you, Honored Sir! we welcome your co-workers! we welcome all! We well remember you, sir, forty-one years ago when in the city of Boston. You, sir, and others up in a little chamber in Cornhill began the work of forming the Massachusetts Horticultural Society, there on simple white delf were there the simple contributions were made in that room we remember our own humble contributons then the nucleus of a society, that now owns a magnificent Temple, dedicated to Horticulture, that cost a *Quarter of a Million of Dollars*, and whose Exhibitions are now made upon rich silver plate in the *Richest Horticultural Society in the world*, one over which you, sir, so long presided and guided it on to Fame and Prosperity.

We, here in California, Honored Sir, hail your coming, and that of your friends, with joy and pleasure. We hail you, sir, as the "Nestor" of Horticulture, the great Father and Apostle of this noble science, and we greet you here and bade you a soul welcome, on the Summit, at the sun's rising, as the most fitting spot being nearest Heaven, to greet you, and we here again, here, amid our Fruits and Flowers, bid you welcome with your friends to California, we with a California delegation we propose Honor, Long Life and Prosperity to President Wilder and his friends.

REPLY OF HON. M. P. WILDER.

GENTLEMEN OF THE CALIFORNIA COMMITTEE—In behalf of my associates and in my own behalf, I thank you for the kind words your chairman has spoken, and for the cordial welcome you have extended to us—a welcome grateful to our feelings after our long journey over mountain and plain as the cheering rays of the rising sun as he glided the snow-clad summit at our meeting. Some of us come from the rough and stubborn soil of New England, some from the more fertile lands of the Great Empire State, and others from the milder regions of the Middle States, but from whatever section we come, we are most happy to be here and to receive your friendly greetings. As we passed over the mining districts this morning, we saw industry developed, which has added so much to the wealth of your people, but we come not to search for golden ore, or to explore the riches of your mineral deposits, we come to witness for ourselves the wonders of vegetable life on these western shores, to see with our own eyes the mammoth proportions of your forests, fields, or orchards and vineyards, to view nature as it were, in her utmost amplitude, nature elevated and developed to the highest and grandest proportions of creations. We had heard of your majestic mountains, your broad vallies and deep ravines—the luxuriance of your gigantic trees, dating in age, far back of the Christian era, your magnificent fruit and gorgeous flowers, and since the completion of the Pacific road we have seen specimens fully substantiating all the reports which we had received of this wonderful region, teeming with the overflowing of God's bounties, a second Eden on earth.

Your chairman has alluded to our cultivation on the Eastern slope. We of New England have difficulties to contend with in our uncongenial climate, but by skill, long experience and indomitable perseverence we are enabled to produce very fine fruits and flowers. I thank you for your kind allusion to the Massachusetts Horticultural Society, an early pioneer institution on this continent for the diffusion of Horticultural science, and from whence emanated more than from any other source the great interest in fruit culture which has spread over the land from ocean to ocean. And now that the *iron* bands have spanned this continent, now that the intercourse between the cultivators of the East and West has become so easy and pleasant, may we not hope that it will result in the more rapid promotion in our favor the pursuits especially of those rural arts upon which must ever depend the happiness and prosperity of the whole people. And how wonful the progress of art and science which have brought the Eastern and Western shores so near together. Surely we live in an age of remarkable enterprise, of noble achievement, no project however bold or vast, whether the building of a railroad from the Atlantic to the Pacific, the laying of the mystic wire through the ocean's bed, threading it across the continent, or winding it around the globe, is too great for the intelligence, wealth and enterprise of the present day. Never before was I more deeply impressed with this thought, than when we met this morning on Nevada's summit to join hands with you in fraternal greetings, and to witness the sun in his coming as he lit up his fires on those snow-clad cliffs with the promise of a glorious day. Sublime indeed was the scene! I felt that I was never so near heaven before, and I could not but exclaim in the language of the Latin poet, "*Sic itur ad astra*." This is the way to the stars.

Thanking you again for your kind attention and courtesies extended to us, allow me to express the hope that as we are brought nearer and nearer together by the appliances of science the bonds of friendship may become stronger in the hearts of our people from shore to shore.

This response of President Wilder was received with a hearty applause. We then called upon Professor Carr, of the University of California, who promptly responded in happy words of welcome to these worthy friends, and in high compliment to President Wilder, Downing, Barry, and others who had done so much to advance the true happiness of mankind. We regret we could not have saved the good speech of Professor Carr, but as it was not prepared, but came warm from the heart, and was as warmly received. Those present enjoyed it much.

The Prof. then toasted the name of Barry, as author of the "Fruit Garden," to which he briefly and happily responded.

The Honored name of Downing was remembered, and Chas. Downing spoke a few brief words, happily responding to the call and the pleasant scene around him and before him in his advent with his friends to the land of Fruits and Flowers.

President Hallidie, of the Mechanics Institute, in reply to a call on him by happy words gave his vote by word and heart for the welcome to California of these Pioneers of Science, assuring them they would find a hearty welcome wherever they should journey.

Mr. Ellwanger in reply to a call on his name as a distinguished Nurseryman, took up a handful of fine Biggarean Cherries, saying, perhaps he might be *eating the the fruit* from trees he had shipped to our State, as the firm of Ellwanger & Barry had sent thousands and hundreds of thousands of trees hither, and he came with his friends to see how a glorious climate and a rich soil had perfected them, and lo! here were Cherries, richer, larger, and far surpassing his highest expectations.

Mr. Shaw upon call responded in a few words his pleasure in coming to meet and greet with earnest welcome those who so richly merit, and are so worthy to receive it.

Mr. Clark briefly replied to a call, acknowledging the pleasure felt at the meeting of friends, with what they had already enjoyed, and what they had in anticipation.

Among the passengers on the train from the East with President Wilder and party came D. O. Mills Esq., President of the Bank of California, (his Brother, Edgar A. Mills, from Sacramento, met him at the Summit,) A. J. Ralston Esq., of the Pacific Insurance Co., and A. B. Forbes Esq., of the House of Alsop & Co.. These gentlemen had the opportunity of knowing the value of a visit of such men to our State as have come with them, we know however they do enjoy and appreciated their coming.

At the Festive a call was made upon Mr. Ralston by a sentiment on a good Policy, who briefly said he felt *assured* his friends would excuse him, as speaking was not his forte, and upon calling a sentiment to the Shipping interest A. B. Forbes Esq., very happily replied, but saying as a side speech he supposed it was the *Policy* of Mr. Ralston that lost us a good speech.

Mr. Forbes in the reply to the Shipping interests spoke these veritable truths. Mr. Forbes said yes our shipping interests are identified with Agriculture and Horticulture, and it is to these great interests that we look, to secure the prosperity of our commerce, without Agriculture our Ships are worthless. Mr. Forbes spoke earnestly, and very happily approving, and complimenting the happy reunion of the friends of science.

We very much regret we had no gifted "short hander" present to catch many brilliant thoughts and inspiring words. We only quote from brief items and memory, regretting we cannot do justice to every speaker.

The splendid sparkling wine kindly sent from Landsberger & Co., & the fruits contributed, were duly appreciated and enjoyed—the whole scene was a most happy one, and one long to be remembered by all.

The party of our Eastern friends were President Wilder, Lady and Daughter, Mr. Clark, Lady and Daughter, Mr. Ellwanger, & Lady, Mr. Downing & Lady, and P. Barry Esq., to these with our Delegates and other guests we met around the festive board twenty four for a feast of reason and true intellectual refreshing.

We feel that an event of this kind should be a matter of record, and we have therefore given all that memory could retain, while the heart was so full of thrilling recollections of the past early half a century, as the visit of these Guests of our State have recalled.

We now cheerfully await the enjoyment both them as they go over our State as they will term its wonders and to report its resources.

My health rest upon all, and the highest degree of pleasure and happiness surround them while we shall have the honor and pleasure of their stay.

VISIT OF EASTERN HORTICULTURISTS.

Our Eastern Horticulturists are making good use of their time. Since their arrival they have visited the Mercantile Library, Woodwards Gardens, the Pioneers Hall, Vanderslice & Co's. Silver Manufactory, Landsberger & Co's., wine House, in our city.

At San Jose, the Garden and Nursery of S. S. Fox, Sanderson Brothers, Gen. Naglee, and others. At Santa Clara, the Fruit grounds of L. A. Goulf, B. F. Watkins, Mr. Pierce and others. They are now visiting Suscol, Napa, Sonoma, Calistoga and the Geysers, as their work this week. To say they are delighted does not express the half. We may look for reports in the East that will do California full justice.

We take pleasure in giving the words of President Wilder, received as we go to press.

We deeply regret our duties deprive us of joining them in their happy excursions, but other duties keep us here to Report.

[To show how the true friends of our State are received, we annex a brief note just received.]

NAPPA, Thursday.

We have had a most delightful visit at our old friend Thompsons, at Suscol, and also at the Woodward Farm. At both of which we saw wonders in the way of Orchards, grain, ornamental trees, plants, etc., etc.

To-day for Sonoma, to the Buena Vista Vineyards. The presence and courtesies of the Californian abound us everywhere meeting us on our route, and aiding us in our investigations.

Yours, WILDER.

To Col. WARREN.

THE SNOW PLANT.

(*Sarcodes Sanguinea.*)

Those who have travelled in our Mountain Forests, either at Yosemite, or the Big Trees, or around Donner Lake, will remember seeing that wondrous and beautiful *crimson cones* that push up out of the ground among the fallen trees, and at the base of large trees—often through patches of snow. This *parasitic* plant is now attracting some attention of travellers, and is eagerly sought for, it is however short lived and almost impossible to transfer or keep it any length of time. A brief time only is it beautiful, but always *beautiful* when viewed in its natural condition as the *habitat* of the earth, springing with its beautiful cones from around the *debris* of the fallen monarchs of the forest—thus, there is *beauty* in the

SARCODES SANGUINEA.

HOTELS AT THE LAKES AND THE SUMMIT

As a matter of public interest, especially to travellers, we as a Journalist feel it a duty to say that the Hotels at Donner are all that is required to make travellers comfortable and happy. Passengers from Truckee which is the point to stop at, they carry passengers to and from the Lake for $3 while a private conveyance costs three times that sum.

The SUMMIT HOTEL which is now particularized by a card in our columns, is a No. 1 Hotel, large, comodious, and full of comforts—where 25 to 50, or 100 visitors can be cared for well. A grand place for a summer retreat, from whence a visit can be made to all the Lakes surrounding these wonderful hights. Mr. Cardwell the Proprietor, understands his work and does it well.

THE VOICE OF WELCOME ON THE MOUNTAINS.

With more than ordinary pleasure and satisfaction we give the following letter most unexpectedly received, giving a very appropriate and very happy sketch of the meeting of the distinguished Horticultural visitors upon the Mountains, by the California Delegation. The account of which is given in full in our Editorial columns, with the address of Hon. M. P. Wilder, and others alluded to in this happy sketch, we are greatly indebted to the writer for the interest thus manifested.

DEAR MR. EDITOR:

In these wonderful days, when the pressure of time upon life is so deeply felt, it is pleasant to get out of hearing of the drum beat, which calls to daily work. Or, if one cannot do this to get a glimpse through the narrow windows of the prison house of Toil at the relations of Labor and Progress, that our Hopes may be strengthened.—Grateful for one of these "outlooks," a recent passenger over the continental highway, begs the Editor of the FARMER the privilege of sharing with its readers the pleasure of a scene which delightful in itself, was more than pleasant in its significance and suggestiveness.

Half a century ago, a Massachusetts man was inspired with the thought that the producer of a new fruit might be as much a public benefactor as the inventor of a new machine—that the study of the laws of vegetable life and their practical applications would lead to the same results as the study of mechanical powers. His written and preached words became a new gospel, the spread of which was marked by gardens and orchards.

And a quarter of a century ago a modest writer began to call attention to the duty of making the American Home in its external and internal arrangements, a true representative of American ideas, of labor ennobled by intelligence, and dignified by a sense of responsibility. What country houses might be, what a Temple the Individual Home should be, because a realized ideal on the banks of the Hudson, a doctrine delightfully taught in books, which will outlive many generations.—Then the Science of Horticulture took the place of Empiricism, Architecture, and Landscape Gardening, were united to it, to make the Freemans Home, and the name of WILDER and DOWNING became household words in the land.

And when thus instructed, the people began to feel the pressure of wants, for which there was then no adequate supply. Far sighted, enterprising men, men who sow broadly for a harvest in the far future, gave commercial value to these ideas of beauty and use, and introduced a new variation into the songs of labor. Great nurseries for fruits and flowers sprang up under their hands and beautiful Nature gave them her inmost secrets to be turned into

"—— profit for the people,
For advantage of the Nations."

When a few days since, the news was flashed over the wires, that Marshall P. Wilder, the venerable Father of American Pomology; that Downing, Mwanger, and Barry, of the great Rochester Nurseries, were on their way to visit the Fruit Garden of the world—the very trees nodded a welcome, and sent half a dozen of their true lovers to speak their messages of affectionate greeting. We were fortunate enough to witness the delicate & fitting manner in which their pleasant commission was executed, and though the story loses greatly in the telling, it deserves to be told.

Traveling *a la Pullman*, developes sociably, and the train due in San Francisco on the 20th, brought a rarely assorted and congenial company, disposed to enjoy to the utmost, every phase of the long journey. "The Horticulturists," a jolly Clergyman, apt to teach, "in the house, by the way," generous Californians, (I shall always know them hereafter by their faces,) their hearts aglow with the welcomes behind and before them, and a few ladies occupied the Palace Cars. Before we reached the mountains we had fruits of an expectancy which meant something more than a new feature in the ever changing landscape.—"With the rising of the Sun, on the Summit of the Sierra Nevada, friends will meet, and welcome you to California," was the message, and so at dawn of day we made ourselves ready for visitors. Not at all as strangers, but as old and familiar friends, the Pacific people came in with the morning, bringing offerings of strange and wonderful flowers of the Sierries, children of the Snow, and children of the Rocks. How soon they knew each other over the flowers! How as one soul, those of the Eastern and Western shores looked out upon the scenes too glorious to be sung in any but words of Scripture. Not of the earth, earthy, it was like the scenes of the Hereafter, where Life is all Service and Joy.

As we descended into the lower world, a feast of welcome was spread and some of us outsiders, with nothing to do but to enjoy and admire, were bidden to it. The fruits whose ancestors were shipped round the Horn, long years ago, were ripe for inspection at the lips of fosterers and originators. Wines with the sunshine of the hills and the sparkle of the waves, were waiting to be tested, and heartsome words that could not be repressed, were waiting to be spoken.

Col. Warren in words like "apples of gold in pictures of silver," words few and simple, and excellent, welcomed the "Nestor of Horticulture," the poems of the beloved name of Downing, Mwanger, and Barry, and their friends, to see and enjoy here the perfected results of their old time and owing in the morning of their lives. Mr. WILDER's reply—I hope somebody will remember the words of it, because I cannot, for as the noble, beautiful old man was making it, I could think of nothing but Mt. Shasta, and Mt. Washington, and Emersons words:——

"Well I know no mountain can
Measure with a perfect Man."

Then Dr. Carr, the Professor of Agriculture and Horticulture, in the University of California, spoke a word of hope for that greatest and best of products, the *human*, to be grown upon these shores, and the educational developments, side by side with the material, which were the glory of the State. The Minister followed briefly and pithily, in a Pauline strain, and Mr. Hallidie, President of the Mechanics Institute, offered a hearty and cordial welcome in behalf of the great interests he represented. Mr. Ellwanger drew us into a lighter mood, by playful allusions to the business interests of their visit, and then Mr. Shaw, the San Francisco Artist, and President of the Fruit Growers Association, who combines the practical and ideal in treading over lifes dusty highway, blew the foam from his beaker, in a fitting instrument, and so the good things and thoughts went round.

Altogether it was the simplest, most appropriate and graceful of the many welcomes, California has extended to her Eastern friends. "If," I thought, "this boastful young State, full of the sense of power, of manifold achievements, comes thus to steal our hearts in open daylight, there is neither harm to it or shame to her on account of it.—Let her boast!" And if we, filled with the new wine of her grand scenery, invigorated by the health of her seas and mountains, grow young in our hearts toward her, and may warm in her praise, there is wisdom in our folly. The youngling of the flock, if to day she is petted and sported by us, she will sooner outgrow it, then shall we our delight in her loveliness, our pride in her accomplishments, and our joy in her great future.

PASSENGER.

Oakland, Cal., June 21st, 1870.

HAPPINESS UPON THE WATERS.

Happy on land, happy on the sea.

We were one of a very happy company that enjoyed last Friday in a "Trip around our Harbor," on the staunch Steamer, McPherson, under the safe directions of her able Commander.

Through the courtesy of Hon. T. G Phelps, our efficient Collector, Hon. M. P. Wilder and his party of friends from the East, together with invited guests, among whom was Gov. Haight, Professor Carr and Lady, of the University, President Hallidie of the Institute, and Lady, and many of our noble Military Chiefs, and others, we enjoyed a day of rare luxury—a refreshing rest among genial friends.

At 9 A. M., the gallant little Steamer unloosed her fastenings from the wharf, and guests unloosed their cheerful voices and commenced to enjoy hours as fully as they sped rapidly. The wind was fresh, but the Steamer sped on her way bravely. The first landing was made at Black Point, the residence of Maj. Gen. Ord, Commander of this Station. After landing, our Eastern friends enjoyed their ramble among the fragrant Plants and Flowers so profusely grown around and over this delightful spot. Here were seen hundreds of magnificent specimen plants, growing profusely in the open air, which our friends at the East never see, except as grown under glass, this was a scene of deep interest to them. After a season outside, invitations came to call us within, and here was spread a luxurious feast of fat things, and sparkling wines made brighter and sweeter, by that genial courtesy which ever marks the hospitality of the brave officer. The repast was a happy one, and on returning to the Steamer the Band on board, spoke sweet music, and on steaming away, the cannon pealed their parting salute, attentions and courtesies which our Chief Magistrate and all others understood and appreciated.

From Black Point to Alcatras, where the same spirit of courtesy showed the guests the principal features of this strong defence of our Golden Gate. Over, through, and around there among Cannon, Mortars, Bombshell and Balls, through Gardens and Greenhouses, and among rich flowers only excelled by the genial spirit of courtesy of Gen. Ord, Commandor Robinson, and others which made the visit one of great interest and pleasure. At parting from Alcatras the Band again gave its strains and the cannon pealed its response. When off and away we sped across the Bay to Camp Reynolds, under command of Gen. Wilcox, here again in this lovely and quiet nook, where the Stars and Stripes wave beneath the hill side, another scene of roving among the flowers, and another scene of courteous hospitality—all bespeaking to our Eastern Guests the great electric chord which binds man to man, East, West, North and South. When leaving Gen. Wilcox and Camp Reynolds, music and pealing cannon told of remembrances and the way Californians treat those from abroad as well as at home they honor and respect.

When homeward bound the strains of music called those that "trip it on the light fantastic toe," to come to order, on the Steamers Deck, where for a season all enjoyed the scene, even though our Steamer rocked "like a cradle on the deep." The dancers kept their feet moving to the merry, merry music till our gay Steamer was fast to the wharf, when there, the parting scene was the first moment of regret experienced that day, and for the many pleasures and courtesies of that day all will remember in grateful recollections the liberality and genial courtesy of Collector Phelps, and will always wish for him the command of a Port of Health, Peace and prosperity with a long life to enjoy it.

TRUE PLEASURES.

The only pleasures that never clog are those of the mind. They are increased by repetition, improved by reflection, and strengthened by enjoyment. They never satiate or pall, but flow, as it were, from an eternal fountain of bright and sparkling water. Time cannot change them, nor custom stale their infinite variety.

A RAMBLE OVER THE MOUNTAINS.

"Above me are the Alps,
The palaces of Nature, whose vast walls
Have pinnacled in clouds their snowy scalps,
And throw'd eternity in icy halls
Of cold sublimity, where forms and falls
The avalanche—the thunderbolt of snow!—
All that expands the spirit, yet appals,
Gather around these summits as to show
How earth may pierce to Heaven, yet leave vain man below."

Byron's picture of the Alps can be literally made true in the grand scenery upon the Central Pacific Railroad in the passage over the Summit. These mountains with their towering pines, and their horricane snow storms, which send down their rocky sides avalanches of snow are fully equal to the Alps or the Appennine in grandeur of scenery or those fearful storms, as hundreds of our early Pioneers can testify, and which we know to be true from our own observation. In company with friends, a delegation from this city, which rallied to go up over the mountains to meet the Horticulturists of the East of which we speak in another column, we left business and care behind us and joining friends we took the cars of the Western Rail Road bound for the Summit, where the snow-clad mountains and flower crown vallies, and beautiful Lakes form a Trio of beauty and grandeur found no where else, save up and among the craggy steeps at the Summit.

From Oakland to Sacramento the Harvest scene betokened that PLENTY that will crown the year. From Sacramento, the varied scene was full of interest, and with pleasant views without and cheerful friends within, this trip in the cars, is over one of the *best Railroads* in our country. The trip from San Francisco to the Truckee is made in 14½ hours with ease and rare comfort.

The grand, wild, and beautiful scenery along the Central Pacific Railroad from Sacramento to the Summit must be seen to be realized, no description of pen nor word of mouth can do it full justice. Short-sighted are those, who having the opportunity, yet fail to go and see what is so worthy of being enjoyed.

Our party arriving at Truckee took a private carriage and rode to the lower end of Donner Lake, and stopping over night at Grant's Hotel. The carriage road from Truckee is a good one, but travellers need not plan for private carriages, as the Hotels always have their carriages in waiting at the Station to convey all passengers to to the Lakes. The Hotels at both ends of Donner Lake are all that is needed for comfort and rest. Mine host, GRANT, at the lower end, and mine host POLLARD, at the head of the lake, do all they can to make visitors *feel at Home*. Donner Lake is 3½ miles long, and 1 mile to 1½ miles wide. It takes its name from the "Donner Party," whose sad fate by a series of sufferings took place near the Lake, has made it an *epoch* in the History of California Pioneers—a full account of the "Donner Party" we see appears in the *Overland Monthly* just issued. We advise all to read that sad account, and then see how much humanity has been made to suffer in their desire to visit this "Eldorado of the West." Arriving in the evening at Donner, we enjoyed a night's quiet rest, and the next day was given to exploration among the curious and rare plants and flowers that are indigerous to the borders of Donner and the hills that surround it; where "Ferns," "Mosses" and the Snow Plant, named in another column, are seen in their native soil.

The "Lake of Beauty," the "Towering Rocks," the "Tall Pines," of which "Ruskin" speaks so beautifully, the "Towering Mountains," the "Banks of Snow" from whose cold borders even the little flowers and grasses peep through to catch the sunlight—these all form *Gleams of the Beautiful*, that are better to enjoy, and more refreshing to the mind, than all the piles of wealth in gold and silver that is now debasing men in their mad pursuit of it.

We know our little party of friends enjoyed that peaceful "Sabbath Day" along the banks of Donner Lake, where the music of the pines and the rippling waves went up to Heaven as an "Anthem of Praise" to the "Giver of all Good" for these scenes of beauty that he has placed now within our easy reach—even on the very ground where brave men and beautiful and accomplished women once perished surrounded by the "avalanche of snow," literally compelled to eat the flesh of their kindred while dying of starvation, the remembrance of these scenes gave to this "Picture of Beauty a shadow and shade.

A walk of some half a dozen of miles around the Lake and then up the towering mountain to the Summit House, closed our Sabbath Day's journey, and there we waited the coming of our Eastern friends of whom we speak in another column.

SUMMIT HOTEL,

At the Summit of the Sierra Nevada Mountains, on the Central Pacific Railroad.

JAMES CARDWELL, Proprietor.

This Hotel is the FINEST SUMMER RESORT in the State of California. The Climate is cool and pleasant in the Summer months; the Hotel overlooks "Donner Lake," and is about a pleasant drive from the famous Soda Springs.

A FINE LIVERY STABLE

in connection with the Hotel, at which Fast Turn-outs can be had at any time.

The Table will be supplied with all the Delicacies of the Season.

FOR INVALIDS no better resort than this can be found in the World, as the air is always Pure and Invigorating.

GRAIN BAGS,

22x36 HAND SEWED, in lots to suit.
Potato Bags 30x30, in lots to suit
HEYNEMANN & CO., Agents,
Oakland Cotton Mills,
5 Sansome Street,
San Francisco.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness

The working parts are permanently fixed, and fully protected from water, dust, straw, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to nut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of which are unquestioned.

For Prices and Complete nformation, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

32-12, GENERAL AGENTS FOR THE PACIFIC COAST, Nos. 3 and 5, Front St., San Francisco, Cal.

FURNITURE AND BEDDING.

CHR. SCHREIBER & CO.,

New York Bedding House

And Furniture Rooms,

No. 400 Sansome Street, Cor. Sacramento,

Manufacturers, Importers, Wholesale and Retail Dealers in

BEDDING, FURNITURE & BEDDING MATERIAL

Having recently enlarged our Warerooms and Work shops, we have now unequalled facilities for manufacturing everything in our line, which enables us to sell at as low prices for Cash as any other house on the Pacific Coast, Chicago not excepted.

Families in want of Furniture and good Bedding are respectfully invited to call and examine our Goods and Prices

☞ We now offer Bedding and Material to the Trade, and Public generally, at Reduced Prices. Don't fail to give us a call.

JACKSON, MICHIGAN, WAGONS.

The Country is full of Eastern and Home-made Wagons, but no wagon except the *Jackson* wagons, has produced proof that they will stand the dry climate of this Coast. Read the following statements:

J. D. Arthur & Son—I have used a Jackson wagon for *ten years*, and consider them the best wagons made.
N. BARBOUR, Suisun.

We have used a Jackson wagon for ten years, and recommend them them as first class.
SWEETZER & DE LONG, Black Point.

I have used a Jackson wagon *four* years, and certify its the best wagon stand he climate I ever saw.
R. C. HALE.

I have used a *Jackson* wagon *five years* and it is now as good as ever JNO. LOPEZ, Centerville.

I have used a *Jackson* wagon *six years*, (crossed the plains with it) and never expended a dollar for repairs.
H. B. LATHROP, Cherokee, Butte Co.

Having used the *Jackson* wagon for *five years*, I can say has proved to be the best wagon I ever used.
J. M. PATTERSON, Alameda.

I was with a party using 30 Jackson wagons over the plains—for durability no wagon is equal to them
WM CARLILE, Moore's Mill, Bodega.

Having used the Jackson wagon for ten years, I can truly say they are the best wagons to stand the dry climate I ever saw.
CHAPIN & JACKSON, San Luis Obispo.

I have used the Jackson wagon to cross the plains and in this country, and consider them to be the best farm wagon made. W. H. PLAGLER, Lower Lake.

I have used a Jackson wagon eight years, I think them superior to any other wagon JOHN FORNEY, Martinez.

I have used a Jackson wagon three years, and consider them the best wagons in use. J. H. PRINCE, Hill's Ferry.

I have in use eight years a Jackson wagon, and must say there can be no better. M. D. ELLERHORST, Haywards.

No better wagon for durability. E. T. WALL, Santa Rosa.

SPECIAL.

A CALIFORNIA MADE WAGON.

In 1869, I had a wagon made to carry fruit at a cost of $150. The *Hub* split so that the spokes had to be taken out and the hub drawn together with clamps The *Tire* was also *set twice*—all this not the fault of the *Mechanic* but the *Timber*. I have a *Jackson wagon* in use ten years, which I think will last ten years more. N. BARBOUR, Solano Co.

Home Miscellany.

THE LONG AGO.

There's a beautiful isle in the long ago,
  All flooded with golden light,
And a river that flows by the shelving shore
  Whose waters are wondrous bright;
There's a bark which glides with a snowy sail,
  And the dip of a silver oar,
And it carries us back to the shining gates
  Of that beautiful past once more;
Ah! every heart holds some sweet dream
  Of the days that have gone before.

There were bright hopes nursed in the long ago
  Sweet flowers were gathered there
And the walls of the beautiful past were hung
  With many an image fair;
And Oh! there is room for the feet to tread,
  This path of by-gone years,
There are joys that bloom in memory's fields,
  And a fount for our bitter tears,
And a grave in which we have garnered up
  All the old-time hopes and fears.

There are beautiful dreams the heart holds dear,
  Bright dreams of the long ago,
And sacred tears for the perished hopes
  That will never return—ah no!
And thus in the tangled web of life
  We weave our smiles and our tears,
Yet the soul has its holy memories
  That cling to the parted years—
Ah! drop the silken curtain now
  O'er the old time hopes and fears.

Shut out the light of the long ago,
  Close the door of the past again,
And stifle the yearning thoughts that fill
  The bosom with so much pain;
Then roll the ponderous stone against
  The tomb that is dug in the heart,
For why should these buried forms once more
  To life and beauty start?
The future may hold some dream as bright
  That will not soon depart.

MEANS OF PRESERVING HEALTH.

BY PROF. SAMUEL EBERLAND, A. M., M. D.

EXERCISE.

One great distinguishing mark between animals and plants is voluntary motion: all animal organisms are created for motion; not necessarily locomotion, but motion of some kind. All young animals are filled with an instinctive love of motion, by which their fluids are actively circulated, and their growing bodies fully developed; the young human being is the only animal organism in which this natural tendency is repressed. The effects of muscular action are seen in the development of various parts of the body: the arm of the blacksmith, the legs of the dancer, the neck of the porter, the familiar examples of growth of particular regions of the body by exercise. The muscles not only move the limbs, but they keep the body upright, balancing it evenly on the extremities; hence we may understand how unnatural positions,—as standing on one leg, sitting on one foot, leaning on one arm, bending the chest forward or sideways,—may cause deformity about the hips, shoulders, spine, and limbs, especially if practiced during youth, when the bones and ligaments are yielding. Many such deformities, lasting for life, owe their origin to the school-room.

The late Dr. John C. Warren writes: "Of the well-educated females within my sphere of experience, at least one-half are affected with some degree of distortion of the spine." An eminent French writer says: "It is so common that, out of twenty young girls who have attained the age of 15 years, there are not two who do not present very manifest traces of it." Any one who will walk along Beacon Street, or other places where young ladies congregate, will soon be convinced of the truth of the above statements, by simply trying to find one of the fair pedestrians who have not one shoulder higher than the other. The remedy lies in impressing teachers, and especially mothers, with the importance of the rudiments of physiology and hygiene; the teaching and the practice belongs essentially to the economy of the household, not of the school-room.

The spine is not a mere contrivance to keep the body erect, like a kind of internal walking-stick, which will answer the purpose just as well if it be a little crooked; the spine encloses the spinal marrow, from which comes off most of the nerves of sensation and motion, and of those essential to the performance of respiration, circulation, and digestion; all these functions will be disturbed in proportion to the degree of pressure arising from its curvature; the lungs and heart are to the same extent displaced, constituting additional sources of disease.

CORSETS.

Among the causes which prevent muscular exercise, the compression of the chest by corsets is one of the most remarkable. Where on the earth, or under the earth, or in the waters, or in the air, in things animate or inanimate, this fashion found its original model, unless it be in the venomous wasp, it would be hard to discover. Tradition insists that corsets were invented by a butcher of the thirteenth century, as a punishment for his wife. Finding nothing to stop her loquacity, he put a pair of stays on her to take away her breath, and so prevent her from going about and talking. This effectual punishment was inflicted by other cruel husbands, till at last there was scarcely a wife in all London who was not tied up in this manner. The punishment became so universal at last, that the ladies, in their defence, made a fashion of it, and so it has continued to the present day. The form given by corsets to the female chest is directly opposed to Grecian and Roman models of beauty; no representations of the ancient goddesses, of the Muse, of the Graces, of the Nymphs, unless it be the Mail-clad Minerva, would give the least idea that they wore corsets. Bonnets change in their size and shape from a coal-scuttle to a lamp mat, and in position from the back of the head to the forehead; sleeves oscillate between the leg-of-mutton and the broom-stick form; skirts vary from the flowing folds of the Roman matron to the hogshead size and steel stiffness of the last year; but the corset remains firm and unchangeable, except in material, through all the other caprices of fashion,—so universally worn that a lady scarcely considers herself well dressed without it; and so desirable, that its first application is an epoch in the life of a miss, looked forward to with the same longing expectation as is the first pair of pantaloons by her younger brother. Its use must be classed with those other caprices of fashion, which make obesity a charm to the Eastern nations, a flattened forehead beautiful in the eyes of a Northwest Indian, a stick through the nose ornamental to the Australian, or useless and small feet desirable to the women of China. They are all strange and inexplicable examples of the human imagination; but as the flattened forehead may make a fool, as the perforated nose or lip obstructs articulation, and as the small feet hinders walking, so the compressed chest impedes free respiration, renders difficult the heart's action, and thus prevents the natural exercise necessary for the proper elaboration, circulation, and aeration of the blood.

What else could be expected from a compression tighter than the surgeon would dare to employ to keep the chest motionless in the case of a fractured rib?

It is not denied that corsets may, in some cases of weakness and distortion, furnish a valuable, perhaps necessary, support to the chest; they are alluded to here as a piece of fashionable dress, and as such pronounced a most absurd, injurious, and death-hastening contrivance,—in the sense in which the accumulated horrors of female fashions are graphically described in the following extracts from the well-known poem of Dr. O. W. Holmes:

"My aunt! my dear unmarried aunt!
  Long years have o'er her flown;
Yet still she strains the aching clasp
  That binds her virgin zone;
I know it hurts her,—though she looks
  As cheerful as she can;
Her waist is ampler than her life,
  For life is but a span."

* * *

"They braced my aunt against a board,
  To make her straight and tall;
They laced her up, they starved her down,
  To place her light and small;
They pinched her feet, they singed her hair,
  They screwed it up with pins;—
O, never mortal suffered more
  In penance for her sins."

The hoops which have recently become so important an article of dress, can hardly be considered as health-destroying articles, unless in very cold and windy weather; and when not of extraordinary size and weight, tend rather to favor than to obstruct the free motion of the limbs, which it is the aim of healthful exercise to secure. They surely are a great improvement over the custom that preceded them: viz., and wearing 10 to 15 lbs. of skirts suspended from the hips. The continual dragging and pressing of such a weight upon the soft and yielding organs of the abdomen, caused numerous infirmities and displacements unknown in young people in old times, when these articles of female apparel were attached to waists, and directly or indirectly suspended from the shoulders. The suspension of such weights from the hips is even more injurious than the use of corsets. The proper dress for the female is a thing yet to be discovered,—one that would allow the free use of every limb, impeding the natural growth of no organ, disturbing no vital function; at the same time graceful, and acceptable to maiden modesty, matronly dignity, and the quiet repose of age and infirmity. —*Good Health.*

ONE OF MY RECEPTION DAYS.

"It takes all sorts of people to make up a world," truly indeed, of the various faults, failings, foibles and inconsistencies that characterizes the different classes into which humanity is divided, furnish us with many a theme for reflection, amusement, sorrow, and, too often, ridicule; for shortcomings—the charity and forebearance which should vitalize and endow with active power, the great bond of sympathy that links in one electric union every human heart. To jest at our neighbor's imperfections, is to deprive ourselves of the right to resent his taking the same liberty with ours; and who would not feel like resenting ridicule, and who so perfect as to dare hope to escape it? But we may not be blind, deaf and dumb, to be charitable, pitying and penitent; on the contrary, to see the errors and weakness of those around us, and to try to speak of them in accents that may thrill the chords of reason, and not wake the harsh discords of anger, may be the higher order of real sympathy, even as practice outranks preaching in its benefits to society and the world at large.

"So, if I sketch some of the "particulars" that jar upon me in my daily contact with the world—for I am not so fastidious as to keep aloof from everything that I cannot approve or admire—will some who take a peep at the mirror of truth, see themselves reflected therein and will they say, "I do not like the picture, and I should like to lose my claim to being its original?" The first step towards improvement of any kind is the conviction that it is needed.

Well, then, this is one of my own reception days, and here are some of my guests, that I do not exactly class amongst my "dearest friends," but then if persons move in society, they must have guests and acquaintances as well as friends.

Here is Mrs. Frivolity—how radiant she is in glimmering satin and sparkling gems, and her smile is as sunny, her laugh as clear and ringing as if she had no care beyond her anxiety to be the best dressed woman of her "set"—no claim upon her time and thoughts beyond her desire to exhibit her superb dresses on all possible occasions.—And yet she is a wife and mother, and I know that her little son is lying at home. Think of it—a tender little child, with fever parched lips, on which a mother's kisses should rain sweet moisture—with fever brightened eyes, that open wide at every sound he thinks might herald Mama's return, and then close wearily as they meet the indifferent gaze of the hired nurse. Think of the little aching limbs that should be cradled in a mother's arms—of little tossing, restless head that should be pillowed on a mother's breast; then look at Mrs. Frivolity as she sits gossiping with Miss Vanity, and serenely nibbling at her plate of cake. Is there no voice from her heart, no bidding of instinct that would point out her duty—the holy duty that is the offspring of maternal love? Alas, it is an offspring too often disclaimed and ignored. And there is Miss Vanity; she is a girl of good principle and kind heart, but oh! so thoughtless and so vain. She, with her mother and two younger sisters, are dependent on a brother, who is devotion, generosity and unselfishness personified. He labors assiduously from one year's end to another, to discharge his duty to those so dear to him, seldom knowing rest or recreation; and yet his sister, who is fully able to help him in his noble work, who is quite capable of contributing to the support of the family, though being prudent and economical, or even more actively, by her own exertions—this sister is one of the variest butterflies of fashion. She squanders more money on one dress than he would spend in a year for any personal indulgence, and it never occurs to her that many sacrifices are daily made in the little household to gratify her extravagant whims; everything is accepted naturally, as a matter of course, and "Brother" is looked upon as a "dear, good fellow, who pays the bills, and was doubtless created for that purpose." But no, I do not think her thoughts are ever so serious as to revert to the creation of anything, unless it might be a chignon or a panier. Oh! how can a woman be so giddy, so thoughtless, so irresponsible, in any relation of life? Will anything ever suggest to Miss Vanity a higher duty, than the one she owes and so religiously pays to fashion and society?

But here is Mrs. Loneliness. "Her husband is away so much, she will tell you, and as she has no children, she would be perfectly miserable were it not for her three canaries, her parrot, her poodle, her toy terrier and her aquarium. Oh! dear Mrs. Loneliness, has it never occurred to you that all your care, your tenderness, your devotion and wealth, might be so much more worthily bestowed on some poor, homeless, human vagrant—whose half-clothed body you might comfort, whose mind you might educate, whose heart you might imbue with principles of virtue and nobility, who soul you might prepare to receive the glorious heritage of immortality promised to the worthy? There is a great deal of misplaced affection in this world, independent of "unrequited love."

Ah! but here is Mrs. Sympathizer. She is a model of sweetness and amiability, and the perfect type of a friend—so ready to fly, whenever she hears of any one's grief or disappointment, to offer on the altar of friendship the sweet incense of condolence and sympathy! So as we poor mortals are doomed to so many and such various grievences and disappointments from the bankruptcy of our husbands, to their obstinacy in refusing to give us "just another hundred to finish that dress," Mrs. Sympathizer is always on the wing." Her own home is seldom brightened by her presence than her friends' drawing-room, and her neglected family receive back much much of the sympathy she so generously extends. Is it not better always to seek and fulfil the duties that lie nearest home, and guard our own firesides from strangers' compassion, before devoting our time and thoughts to our neighbor's misfortunes?

And here comes Mrs. Parsimony. How gay she looks; how brilliant; how animated. Every fold of her rich silk, every flutter of its lace flounces, every scintillation of her sparkling diamonds, speaks eloquently of luxury and wealth, and she never omits an opportunity to emphasize their voice by minutely detailing the value of every article she wears. She glories in astounding you by the announcement of the "fearful amount of pin money she spends—what her last summer's trip cost," etc.; but in other circles Mrs. Parsimony tells quite a different tale. To her seamstress, her dressmaker, her children's governess, and her servants, she is always "dreadfully short of money and times are very hard, and indeed she cannot afford to pay them their price and they must work cheaper." Truly, "consistency is a jewel" and we women do well to remember always, how its unfluctuating beauty adorns the character in which it is set; and consistent liberality is one of the cardinal virtues.

But here is Mrs. Philanthropy. She is the lady patroness of two orphan asylums. Her pet hobby is unfortunate children, and she is perpetually raising a fund for the relief of some of them, but I doubt if there could be a more fortunate child than an orphan neice of hers, who, I think, should share with her own children her maternal care and attention"; but she is left to the guardianship of strangers, and is more abused and neglected than many children in the lowest grades of humanity, and is for more to be pitied than the ones whose hopes and joys, pleasures, revolve in an orbit circumscribed by the asylum walls. It seems strange, indeed, that so many persons fail to realize that charity and philanthropy should "commence at home," with our own flesh and blood; and then many go to the opposite extreme and think it should end there also.

But enough for the present. I do not like to criticise and condemn, and it is far wiser and better to go through life seeking for beauties than for imperfections in all that we meet; but, as I have said, it is not always best to see and hear and be silent, when we think that one voice, no matter how feeble, may arouse thought, stimulate feeling, or influence action, even in a slight degree. Now, I have dealt only with the inconsistences of my own sex, and have spared the other; not because I am blind to masculine imperfections, oh no; but ye God-like man I fear would not be benefitted much by a women's fault-finding, and I want to see if one of his own sex will so far honor a women's example, as to dissect the character of some of his associates, for our edification and their possible benefit. —*Southern Cultivator.*

HOUSEKEEPERS.

A young married couple in a Wisconsin town lately began housekeeping, and the first purchases of the head of the family at the village grocery were: Five cents worth of soda, five cents worth of salt, two cents worth of paper, one cents worth of chewing gum and twelve cents worth of soap.—The bill amounted to twenty-five cents, which was paid by the young Benedict in specie, and as he left the store he remarked to the clerk that "keeping house is cheaper than boarding."

A WORD TO BOYS.

Show me a boy who obeys his parents, who has respect for age, always has a friendly disposition, and who applies himself diligently to get wisdom, and to do good towards others, and if he is not respected and beloved, then there is no such thing as truth in the world. Remember this, boys, and you will be respected by others, and will grow up and become useful men.

WALTER SCOTT.

The words which Walter Scott puts in the mouth of Jennie Deans, in her memorable address to the Queen, are true as they are beautiful. "When the hour of trouble comes—and seldom may it visit your leddyship—and when the hour of death comes, that comes to high and low—long and late may it be yours. O, my leddy!—it is na what we have done for oursels, but what we have done for others, that we think on most pleasantly."

Scratch the green rind of a sapling, wantonly twist it in the soil, and a scared or crooked oak will tell the act for centuries to come. How forcibly does this figure teach the necessity of giving right tendencies to the minds and hearts of the young.

NEW AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz.: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration; so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the most style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price [illegible]

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $2 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price [illegible]

BATH HOUSE.

No. 524 TO 528 PACIFIC STREET,

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense have been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31:3

WHO MAKES SCRAP BOOKS.

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have a choice collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Recipes &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all that is strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICHTYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the Institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed, and the celebrated Du Chaillu GORRILLA which was exhibited ALIVE in Paris, has been added to the already rich collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from 2 to 5 P. M.

Miscellany.

WASTING TIME.

"Here you are, sir, wasting your valuable time as they say to me," said Charles Dickens one morning, many years ago, as his little boy ran up to him on the Broadstairs sands, spade in hand, and we have often wondered since how many people there are who know what is meant by wasting time.

It is very easy to make mistakes on this subject, for nothing is so deceitful as appearances. We all know that Penelope, that classical model of propriety and all the virtues, employed her time in weaving a garment by day, and unraveling it at night. She did this to keep off her lovers, who wanted to persuade her that her husband Ulysses was dead. When the suitors found her out, of course they accused her of wasting her time—but at that moment Ulysses knocked at the door, after seeing many men and cities. In fact, he had come home, and the fair Penelope had her reward after all.

Surely it is waste of time for that old tortoise to try to beat the nimble hare at racing, but the silly old thing will crawl on, without once stopping at about the pace one gets down the Strand in a cab on a rainy day. Presently, down comes the hare at a furious pace—there is no wasting time with him, at all events—but, alas! when he arrives breathless at the winning post, he finds the old tortoise there before him, and fast asleep too. "Ah!" says the hair, "I wish I had taken my nap at the end instead of the beginning of the race, and then I should have won it, and that tortoise would have crawled in vain; as it is, he has made good use of his time, and I have wasted mine."

What an idle man that is yonder, fishing, hour after hour! Truly a melancholy spectacle, as dear old Doctor Johnson would say. "A line with a worm at one end and a fool at the other." Wrong again! That man is an eminent statesman, who has escaped to recruit his weary brain in the company of the kingfisher and the heron. What eloquence, wisdom, and wholesome legislation do we not owe to such hours of idleness! Say, do not some of our best and kindliest thoughts often come to us as we sit on the beach and toss pebbles into the shining sea covered with its "innumerable smiles?" Recreation is not waste when it is a rest from real work and a preparation for more.

We confess we never feel at home with a man who must always be doing something. There was a French statesmen who wrote a huge book by snatches, in those occasional intervals when he happened to be kept waiting for his dinner. We have not the slightest wish to see this ante-prandial performance. We have no doubt it was a very dull book, for men who are never at leisure are always dull.

Busy men and idle men are equally insufferable to us. The real worker is never in a hurry, and the real idler, we may add, is never anything else. Who ever heard of Lord Palmerston, or the Duke of Wellington, or Lord Brougham, being in a hurry? When we see a man in a great hurry, we may be pretty certain that his profession consists in doing nothing, and that he is doing that badly. The idlest man we ever knew was always so much pressed for time that he never had five minutes to spare for anything. No one need ever be in such a terrible hurry as this. If we ever find ourselves so, it is probably because we have been wasting our time. We have had no system, and have, therefore, done in an hour what ought to have been finished in twenty minutes; or, like the hare, we have loitered on the way, and then we make a push for it, and arrived just in time to miss the train. How many hares there are every morning who arrive breathless in the city, because breakfast was half an hour late, or because they would not get up when the clock struck seven.

But our readers have a right to ask what constitutes, as a general rule, waste of time. We answer in a single instance—whatever hinders or prevents you doing your work in life. Every one should realize that his duty here consists in applying himself to some worthy work, and his time may then safely and without waste be divided into three periods—preparing for work, doing work, and resting from work. Want of time, then, becomes a thing purely relative. What is mere waste in one case is real profit in another. The idle man who travels simply for pleasure, is simply wasting his time; the man who travels for safety, or the man who travels to get rest from work, or for the sake of his health, is not wasting or abusing his time, he is turning it to good account.

Let the heart be filled with some good principle of action, and let the mind be directed towards some congenial pursuit, and then our innocent pleasures will be as little in danger of degenerating into criminal indulgence as our wholesome recreations into waste of time.—*Cassell's Magazine.*

INSANITY IN ENGLAND.

According to the most prominent medical journals of Great Britain, insanity is largely on the increase in England. Dr. Martin Duncan writes to the *Quarterly Journal of Science* that "the cases of the insane in our fine asylums are not more numerous than they were from 1748 to 1814, when the treatment of the insane was a disgrace to humanity;" that "our social state is producing year after year an increasing amount of insanity more than ever difficult of cure; and that "there is no decoying or explaining away the fact of the rapid accumulation of insane persons in all parts of the kingdom."

Harvard Musical Association are preparing to celebrate the Beethoven Centennial, Oct. 17.

Why is a list of musical composers like a sauce pan? Because it is incomplete without a Handel.

The Rev. Chas. Beecher of Georgetown, Mass., a brother of Henry Ward, is the possessor and skillful player of a violin over two hundred years old. Fiddle, D. D.

Miscellaneous.

TO THE PUBLIC!!!

THE

SAN FRANCISCO

PACKAGE EXPRESS

COMPANY.

CAPITAL.....$100,000

IS ORGANIZED FOR THE PURPOSE OF CARRYing Passengers, Baggage, Packages, and Parcels from the different Railroad and Steamboat Lines, and delivering the same to any part of the City.

To our friends from the Country this system presents itself for their consideration. They can give their checks, etc. to our Messengers on the Cars and Boats and feel perfectly sure that all will be safely and promptly delivered, thus saving any trouble with Hackmen or Job Wagons.

The Street Cars run from all Depots to the different Hotels.

Fruit or other Freight consigned to our care will be promptly delivered, and Freight Bills paid.

Mark Care of

"S. F. Package Express Company."

Commissions for the purchase of goods in this City especially solicited, and articles forwarded as directed

This Company commends itself to the General Public. The same system has been long in operation in Eastern Cities with great success

HUCKS & LAMBERTS'

CELEBRATED PATENT

H.&L.

AXLE-GREASE

This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry:

thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. The three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

SAN FRANCISCO, June 30.

The Grain Market presents a singular feature; wheat has recently advanced in Europe so as to give a good margin to the shipper, yet nominally no wheat has recently been sent abroad. Does not this show that the recent rise is fictitious, and made upon speculation? We caution our Farmers not to be caught, while the price is now high sell, the present is a sure thing. The last news indicates a still greater decline, and the fear of short crops in France has been removed, so that the trade to that country will be lessened.

The reports from all sections indicate large crops wherever proper tillage has been given. Napa will be the "Banner County" this year, showing a large crop, much beyond last year, and some fields giving *sixty bushels* to the acre. Our Barley harvest will be large and fine,—Oats also a good crop. The Hay crop has been well gathered, and a good one.

We can say with full confidence by reason of our own knowlege, and reliable advices that the Harvest of Cereals for 1870, will be fully up to our best expectations, enough and to spare, more than we can sell, unless our Farmers will grow wiser and sell when good prices like the present comes.

Potatoes, Corn, Beans, etc., are abundant and more than last year.

The heart of the husbandman should rejoice and be glad, and grateful too for the abundant things of Earth.

Retail Prices in the Fruit Market.

Our Fruit Market offers now an abundance of small fruits, our Cherries are magnificent, and the show this year is splended, the largest ever yet shown.—The prices of this fruit has been well kept up, choicest, 30 and 40 cts., at retail. Few Peaches have yet come in; Apricots are abundant and better; Pears backward; Apples increasing; Strawberries a fine show; Raspberries good; Blackberries but few, while Currants make a splendid show and never before so abundant or fine. Figs are now coming in but generally the small Smyrna Fig, and not fully ripe. Our show of Fruit is generally excellent.

To day the large Black Mission Fig, and the Brown Turkey Fig made their appearance, and fine specimens.

MEATS.

The solid meats are good and in plenty—the supply is large and prices less, and owing to the abundance of Vegetables and Fruits, less solids are consumed. Yet the amount used is very large—hundreds of Beeves, thousands of Sheep, and lots of Calves, Lambs and Pigs fall a daily sacrifice to the appetite of our people.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser for sixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

Send Us Samples.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

Natual History.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

AGENTS! READ THIS!

WE WILL PAY AGENTS A SALARY OF $30 per week and expenses, or allow a commission, to sell our new and wonderful inventions. Address M. WAGNER & CO., Marshall Mich. 33.18.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent on the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence. In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR PERMANENT PASTURES.
FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES FOR MEADOW-LAND.
PACEY'S PERRENNIAL RYE GRASS,
ITALIAN RYE GRASS,
EUROPEAN RYE GRASS,
PERRENNIAL RED AND WHITE CLOVER,
ALFALFA OR CHILI CLOVER,
KENTUCKY BLUE GRASS.
NEW ALSIKE CLOVER.

And many other new and rare Grass Seeds to arrive.

THE BEST KINDS OF

FIELD, GARDEN, FLOWER,

Fruit and Ornamental

TREE SEEDS.

TOBACCO SEED,
COTTON SEED,
COFFEE SEED,
TEA SEED.

We would call particular attention to our stock of choice and rare Flower Seeds, comprising upwards of 250 varieties, including all the choicest and best Greenhouse and Florist Flowers.

These will be ready in the months of November and December.

Collections can be forwarded by post at the following rates:

50 Packets choicest and best			$10 00
25	do	do	do	5 00
12	do	do	do	3 00
50 Packets Good Selected			5 00
25	do	do	do	3 00
12	do	do	do	1 50

The Seeds and Colored Plates can all be seen at the Reading Room of the Farmer Office, where directions will always be cheerfully given as to their cultivation.

A large Library of Floral works can always be found at the Reading Room and Museum, which are Free to all for reference

Silk Culture:

The Trees and Seed of the Mulberry can be obtained of us in any quantity.

FLOWERING BULBS.

Lilies, Tulips, Hyacinths, Amaryllis, Anemones Ranunculus, Sarcianas, Tuberoses, Peony-Roots, Crocus, Snow-Drops, Very Choice Gladioli,

Choice collections of Flowering Bulbs, comprising all the most showy and leading varieties from $5 00 and upwards

EVERGREEN AND DECIDUOUS SHRUBS, ORNAMENTAL TREES.

FRUIT TREES.

The newest and most approved sorts:

Peaches, Figs,
Plums, Almonds.
Cherries, Walnuts,
Apricots, Nectarines,
Pears, Grapes,
Apples, Etc. Etc.

Also the best varieties of Strawberries, Raspberries, Gooseberries, Currants, and Blackberries.

PERPETUAL FLOWERING ROSES

Of the best kinds.

GREENHOUSE AND BEDDING PLANTS.

Any one desirous of having their Gardens look gay through out the season, can be furnished with the plants at a reasonable rate, by applying at this office.

Every information given as to the cultivation of Plants and raising of Seeds, etc. Also respecting the mode and best systems of Pruning all varieties of Trees, etc.

Gardens and Grounds designed and put in order, and every article furnished for same.

A large Library of Floral Works can always be found at the Reading Room and Museum, which are Free to all for reference

SEASONS IN FRANCE.

PARIS, June 18, 1870.

French farmers are in a state of great alarm.—After a season of prolonged frosts, succeeded the most drying winds, only to be followed by a tropical sun, the consequence is, that most crops are next to a failure, and pasturage a thing unknown. The windows of heaven would require to remain open for ten days and nights consecutively, to satisfy the parched soil. Cattle have long since been put on short commons, and there is a general rush to sell off live stock—as the deficiency of food, the want of water, and the excessive heat begin to tell, in the production of disease. Meat is falling in price, but next year must cover the loss. The great question of the moment is, not to save, what is beyond saving, but to repair the loss, by resorting to the cultivation of every kind of plant, that will supply green fodder up to the early part of November, and economize, the reduced stores of winter provender. Mixtures of buck-wheat maize, grey peas, canary grass, millet, vetches, and spurrey, in various proportions are recommended, as well as the sowing of turnips, rutabaga, and carrots, of rapidly growing varieties—the planting of cabbage, even potatoes, lentils, Jerusalem artichoke, field horse-radish and camline. As for the grain crops, excepting wheat, they are stunted and premature. One great lesson has become evident from this nearly unparalelled drought, that is, the lands most deeply tilled, and best manured, have resisted the evil the most.

INTERNATIONAL EXHIBITION FOR 1871.

The Universal International Exhibition, for Agricultural products, to be held in 1871, promises to be a success. More than half of the estimated cost—300,000 frs. has been subscribed, and in a few weeks, the programme, list of prizes, and general conditions will be published. A fundamental principle of the show will be, the right of the exhibitors to elect the juries.

More than four years ago, the government appointed a commission of Agricultural Inquiry, to study the grievances of the Farming community; this report has at last been given to the world, and is an immense negation of the reforms demanded—and has this curious difference from all inquiries, that the report is in complete contradiction with the evidence. Reductions in the Army and Navy estimates; to apply the savings in opening up the country, were demanded by every witness, and these are the evils, that will be upheld as sacred By this, French farmers, ought only to rely upon themselves.

THE FEEDING PROCESS.

The French and German Zootechnists, are not in harmony upon the chemical principles of nutrition. The farmer, even among the most enlightened, are prejudiced, although these principles have been beneficially applied in Germany. A horse or an ass, does not digest it is true, in the same manner, as an ox or a sheep; but special differences in organization in no way affect the immutable laws of nutrition. Placing an animal in the best hygienic conditions, the law of development demands that it ought to receive from its food all the chemical elements of its body, but the determination of the quantity and richness of this food taken in connection with the end in rearing the animal constitute the experiments, which for years the Germans have been patiently conducted long. The instinct of animals will procure them what they want, but their wants may be in opposition to our ends. Boussingault has shown, that feeding cows on potatoes, entailed a pure loss of alimentary matters, until the quantity was reduced and associated with other food. Haubner, has recently confirmed these experiments. He fed sheep on wheat straw, and 3½ pounds of potatoes daily. Much of the feculous matter of the potatoes passed off in the excrements, as shown by the iodine test, changing it to a beautiful blue; on adding however, a half pound of peas to the dietary, the fecula instead of finding its way to the manure heap, became converted into meat.—Stohmann has determined also, the economical benefits to be realized, by supplying animals with a pre determined regimen. He fed four seperate lots of sheep, from the middle of December to the middle of the following April, on clover hay, wheat straw, potatoes, oil cake, and salt, so proportioned, as to test the comparitive values, of nitrogeneous and non-nitrogeneous compounds, the best results were obtained from the mixture of food, rich in azotized and carbonaceous matters. He has also shown, the necessity of studying the development of animals—when the framework, the skeleton—rapidly forms by cell, and it becomes the duty to fill up those, by food, rich in phosphates of lime and nitrogen—this care becomes a necessity, when the end is, precocity and

A NEW COMPOSITION FOR PAINT.

A new kind of "stony tar," very cheap, and efficacious, is finding its way among French farmers—and appears to be a corrective against humidity, rust, and rot. It does not "scale off," nor is it affected by heat—it serves as a black paint, and is largely employed in mines, on railways, and in founderies in Germany and Belgium. A ship merchant of Magdebourg has discovered the compound, which he employs for all his vessels. It is composed of fish oils, salts of magnesia, with tar for the base.

Eastern Correspondence.

LETTER FROM AN OLD CALIFORNIAN AT THE EAST.

NUMBER ONE HUNDRED AND SIXTEEN.

GREAT MUSICAL FESTIVAL.

New York, June 20th, 1870.

EDITOR CALIFORNIA FARMER:

The grand musical festival which was to have shown Boston what great things New York can do, turned out a huge humbug as far as its success as a monster musical event goes, it has made New York a laughing-stock for the whole country, and yet I enjoyed it because it offered me an opportunity to hear the Handel & Haydn Society of Boston, Gilmore's unrivalled Band, and Madam Parepa Rosa in the Creation and Elijah. I hope the mean singing of the New York societies in contrast to the superb training of the Handel & Haydn Society will have a good effect, and yet I regret to find that the vanity of our Associations is as offensive as ever. They seem determined to shut their eyes and ears to the truth. The German Clubs, however, are profiting by the lesson, Gilmore's Band it is a delight to see and hear. Of Madam Parepa Rosa in oratorio, it is needless to speak. She is simply perfect. Even an uneducated ear must enjoy the grandeur of her style and the wonderful capabilities of her voice, indeed I know such to be the case, and am sure if the Handel & Haydn Society of Boston, with Mad. Parepa would only sing Elijah here five or six times, they would even interest a New York audience in the music of Handel, Haydn and Mendelsohn. It is amusing to hear New Yorkers boasting of the success of the Philharmonic Society. Why at the rehersals you can hardly hear for the jabber of the young men and women who make the occasion a rendezvous for flirtation, and the concerts are a success because the leaders of our fashionable societies have been *cozzed* with patronising them. Ask any musical New Yorker who is not puffed up with vanity, if he or she thinks classical music is appreciated in New York, and I am sure you will get out one answer.

DEATH OF CHARLES DICKENS.

The death of Charles Dickens is even yet a topic of sorrowing conversation. This proves the esteem in which the great author is held. Every household almost, where English literature is valued is in mourning. We all feel that we have lost a friend. How pathetically Edwin Drood speeks of his death. More than over the bust and tablet which will be reared in Westminster Abbey will it bear witness to the mutability of human genius. Indeed it is a type of his life, cut off in the moments of its greatest interest, and left unfinished as a monument of the victory of Death.

TRIBUTE TO WM. M. ZABRISKIE.

I heard of the loss which California has sustained in the death of William M. Zabriskie with great sorrow. One by one the pioneers depart, they are all missed, but few have won the hearts of all men like William M Zabriskie.

BENICIA SEMINARY AND PUPILS.

In the long report of the examination and exhibition of the Benicia Seminary which has been sent me by some kind friend, I am delighted to find that among those who distinguished themselves was Miss Grace Roberts. I can recollect her at her kind father's house on the hill, where she was a most lovely child, and gave promise of a happy future. It affords me intense pleasure to read of the success of the children whom I used to know and whose progress I have watched with anxious eyes. I was so long a teacher in San Francisco and Benicia, that nearly all the young people are known to me, and I take as much pride in their success as if I had remained with them. I have the great pleasure too of receiving so many kind remembrances from them, that I am very grateful. The association with, and the affection of young people are among the higher rewards of a teacher's life.

OLD CALIFORNIANS AT THE EAST.

I have lately had the great pleasure of enjoying the company of Mr. and Mrs. Griffen, Miss Lizzie Griffen, Mrs. Judge Hastings and Mr. C. J. Platt. Old times in California have been talked over, changes commented upon, while all were united in the most affectionate regard with which all old Californians everywhere entertain for their home on the Pacific Coast. The brilliancy of life here, the gayety of European capitals cannot efface the remembrance of happy days in San Francisco. I need not say that you are often spoken of. Always the enthusiastic friend of Horticulture and Agriculture in California, nor that the Golden State has become noted for her fruits and grain, your constant labor is appreciated, and it is always with the hope that it may be substantially rewarded. I hear your museum frequently spoken of with admiration. M. A. S.

VISIT OF AGRICULTURAL EDITORS.

We give with much pleasure the following letter just received by us from the office of the New York *Tribune*.

We rejoice to send forth the announcement of the coming of Gentlemen of the Press. Those that we know will give a true record of the resources and the capacities of our wonderful State.

President Wilder and his friends, now in our State visiting our orchards, vineyards and other agricultural resources, have *set the ball in motion*, their reports have awakened a due attention to California, their visit has been of great service to California, and its influence will be exclusive by for good.

We hail the coming of the "Brethren of the Press" and hope the wishes expressed in the letter may be fully carried out—we will do all we can that it shall be so, and we hope the officers of our State and District Societies will co-operate, and make their visit beneficial to our State as well as pleasurable to our friends who come to us.

We hail their coming and bid them welcome in advance, the more of them the better.

NEW YORK, June 25th, 1870.

MESSRS. WARREN & Co.,

320 Clay Street, San Francisco.

Gentlemen—In about a month from now, a party of some *twenty-five* Agricultural writers and correspondents propose to visit the Pacific Slope.

We may not stay more than a week or two in your city and vicinity, and it will facilitate our object if we can meet a number of your leading Farmers. We would see a Representative vineyard, and for my part I would like to see a little of Stanislaus and the other wheat counties. A Special Committee of the "Institute Club" will be with us, and we would be glad to have a good FARMER'S TALK with you all.

We will write you again, giving you "Programme" and numbers more exactly.

The papers represented will be the *Tribune, Times, World, Sun, Moore's Rural, Artizan, Independent, Horticulturist, Methodist, Examiner, Massachusetts Plowman, Hearth and Home* and probably *Prairie Farmer* and *Western Rural*.

We will take specimens of your *soil* for analysis by our Agricultural College and otherwise *do all we can* to illustrate the peculiarities of your Soil, Climate and Fruits.

Very Respectfully yours,

JOSEPH B. LYMAN,
Agricultural Editor *Tribune*,
Secretary Excursion Party.

UNIVERSITY OF CALIFORNIA.

We rejoice to know that the Board of Regents have begun their work, elected their new President, laid out work for their Professors, and began to be a *Live* Institution.

Resolutions to send out Lecturers upon Agricultural Science, have been appointed, and Professor Carr will soon be in the field. These lectures we know will be of great interest and value from so able a lecturer as Professor Carr. We shall speak at length in our next of our Agricultural College.

MAMMOTH TREES.

It is well known that California has the largest trees in the world, some of them measuring, as the fallen father of the Calaveras forest demonstrates, 150 feet in circumference. In the same grove are two standing perfect growing trees, 360 feet high, which measure respectfully 99 and 84 feet in circumference. In Fresno county a grove has recently been discovered, which are still larger, one perfect growing tree is 400 feet high, and 122½ feet in circumference; a beautiful formed tree. These trees are of the *Sequoia* family, about the same relation as the redwood timber of Santa Cruz. We have also large redwood trees of similar appearance, and if not of such giant proportions, they are more beautiful in their stately majesty and healthy growth. Last week we saw the bark of one of these trees, cut on the rancho of Mr. S. Nichols, on the Zayante creek, which measured, when fallen, from but, cut to the top 346 feet, and 155 feet to the first limbs. The circumference, at 12 feet from the ground, (the top of the peeled section), outside of the bark, is 32 feet. This sapling is not the largest tree in the forest by any means, the Fremont tree being 46 feet in circumference, but hollow and rotten (like its namesake) at the heart. Other trees of monstrous size are found growing on the head waters of the Butano and Pescadero creeks. The Zayante tree, of which we are speaking, was cut this spring by J. A. Green, who is sole owner, having purchased it for peeling, and to exhibit the bark, which he peeled off in sections, and put it together with hinges, so as to make it portable This tree is perfect and sound to the heart. A section of the tree having been sawed off to make the floor of the bark-house, showing its growth (in ring-circles) and proportions as it stood. The tree was scaled to the ground, and it was found that the first two hundred feet would make 30,000 feet of lumber, according to Spaulding's scale. The bark will average about five inches in thickness from the base to the top of the section peeled, ten or twelve feet. The limbs and top of the tree, not suitble for lumber) would make over 100 cords of wood. Another tree, much larger, but not as straight and sound, grows near the fallen one. On last Thursday the peeled section was shipped on the steamer *Monterey* to San Francisco, for exhibition, where the proprietor will set it up and keep open house to his friends for a few days, and ship it East, via C. P. R. R. to Omaha, Chicago, New York, and all the large cities of this country and Europe. We think that such an exhibition will do much to open the eyes of the world in reference to the wonderful productions of California, especially Santa Cruz county, and quite a business might be made of it, peeling these large trees and selling the bark in sections, for the purpose of making arbors in the gardens of wealthy amateurs, who seek novelties for their own amusement and recreation. A tree, like the one in question, would make twenty wigwams each as large as a small house, which would readily sell in the East at a handsome profit.—*Santa Cruz Sentinel*.

HOT WEATHER AND COLD.

While we are hearing of *hot weather*, not only all over California, but also in the Eastern States, suppose we should turn to the early records of COLD weather for a contrast. We give the following:

In 401, the Black Sea was entirely frozen over. In 545, the cold was so intense that the birds allowed themselves to be caught by the hand. In 1763, not only the Black Sea, but the Strait of Dardanelles was frozen over. The snow, in some places, rose fifty feet high. In 860, the Adriatic was frozen. In 991, the winter lasted very long, with extreme severity; the crops totally failed and pestilence closed the year. In 1123 it was so extremely cold in Italy that the trees split by the action of the frost, with immense noise. In 1233 the Po was frozen, and loaded wagons crossed the Adriatic to Venice. In 1344 it was clear frost from November to March, and all the rivers in Italy were frozen over. The year 1408 was one of the coldest winters ever remembered. The sea was frozen over between Norway and Denmark, so that wolves driven from the forests came over the ice into Jutland. In 1684 the cold was so excessive in England that coaches drove along the Thames, which was covered with ice eleven inches thick. Almost all the birds perished.

SACRAMENTO.

"The Queen City of the Plains," is now busily at work laying the rails for the Street Rail Road, by which her citizens can be conveyed from the Levee up to the interior as high as 16th Street.—K Street will be at present the chief avenue, with some side branches. Sacramento is now rapidly improving in all her great interests, Mercantile, and Manufacturing, as well as Agricultural.

Real Estate is steadily advancing, new buildings, and of the finest class are being erected, and the business generally of the City and County is improving, and adding wealth to this now greatly prospering City.

THE RICHMOND CALAMITY.

RELIEF FOR A BROTHER EDITOR.

[The following Circular was such as we cheerfully give it place, hoping that good will come to the family of the late highly esteemed Editor Brock, who perished in that fearful disaster.—ED. F.]

RICHMOND, VA., May 7th, 1870.

EDITOR CALIFORNIA FARMER:

Dear Sir—The late melancholy occurrence at the Capitol of Virginia has elicited so spontaneous and hearty an expression of sympathy, and such substantial proofs of practical benevolence, from almost every quarter of the country, that it is with no slight misgiving and reluctance "The Press Club of Richmond" have determined to mention among their brother Journalists the special case of the late Dr. J. B. Brock, City Editor of the Richmond *Enquirer*, who was among the victims of that fearful catastrophe, falling at the post of duty. The little Club of which he was a member have of themselves been able to do but little more than lay him away becomingly in his final rest, and to put on record their sincere appreciation of his virtues as a man and his worth as an editor. But they feel that something should be done for those who were dear to him and wholly dependent on him. Dr. Brock left an interesting young family, consisting of a wife and three children, who are without any means whatever, and entirely incapable of providing for themselves. In his sudden and mortal agony, as testified by survivors who where near him, he forgot himself in remembering them, and his last faltering accents conveyed to them messages of tenderest love. Is it not proper and becoming that the profession to which he belonged should divert to the special behoof of these bereaved and helpless ones, some portion of that generous assistance they are rendering and invoking in behalf of all the sufferers? If you should so think, and recognize in the facts stated an appeal to yourself for some private effort among those about you who would most naturally and most readily sympathize with it, we should be happy to be the channel through which your kindness for the companion and offspring of a fallen brother may reach its objects; or you may remit to the Editors of any of the daily papers of this city—the *Enquirer, Whig, Dispatch, State Journal*, or *Evening News*.

JAS. MCDONALD, (late of the Whig,)
Secretary of the Commonwealth of Virginia.
THOS. H WYNNE, (late of Enq. & Ex.)
Supt. Richmond and Petersburg Railroad.
G WATSON JAMES, *Editor Old Dominion.*
B. W. GILLIS, *Editor State Journal.*
P. G. COGHLAN, *Sec'y Chamber of Commerce.*

N. B. Donations to be left with Ball & Ayres, 315 California Street, San Francisco,

A RELIC OF BENJAMIN FRANKLIN.

The Chicago *Evening Journal* says it is indebted to C. B. Nelson, of that city, for the privilege of presenting to the public, for the first time, the following beautiful and characteristic memorial of Dr. Franklin. It was written to Miss E. Hubbard.

PHILADELPHIA, February 12, 1766.

DEAR CHILD.—I condole with you. We have lost a dear and valuable relation, but it is the will of God and nature that these mortal bodies be laid aside when the soul is to enter into real life. Existing here on earth is scarcely to be called life. 'Tis rather an embryo state—a preparation for living, and man is not completely born until he is dead. Why then should we grieve that a new child is born among the immortals—a new member added to their society? We are spirits. That bodies should be lent to us while they can afford us pleasure, assist us in acquiring knowledge, or in doing good to our fellow creatures, is a kind and benevolent act of God. When they become unfit for their purposes, and afford us pain instead of pleasure, instead of an aid become an incumbrance, and answer none of the intentions for which they were given, it is equally kind and benevolent that a way is provided by which we may get rid of them. That way is death. We ourselves prudently, in some cases, choose a partial death. A mangled, painful limb, which cannot be restored, we willingly cut off. He that plucks out a tooth parts with it freely, since the pain goes with it; and he that quits the whole body, parts with all pains and possibility of pains and diseases it was liable to or capable of making him suffer. Our friend and we are invited abroad on a party of pleasure that is to last forever. His chair [alluding to sedan chairs, then in fashionable use] was first ready, and he has gone before us. We could not conveniently all start together, and why should you and I be grieved at this, since we are soon to follow, and we know where to find him?

Adieu, my dear, good child, and believe that I shall be, in every state, your affectionate papa.

BENJ. FRANKLIN.

GOOD BREAD. GOOD HEALTH.

It is a sad fact that half the bread made is not fit to eat, and sickness is the result; whereas, if Donnelly's Yeast was used *Good Bread* is always secured.

Agriculture.

MEMORANDA.

BY MARK TWAIN.

HOW I EDITED AN AGRICULTURAL PAPER ONCE.

I did not take the temporary editorship of an agricultural paper without misgivings. Neither would a landsman take command of a ship without misgivings. But I was in circumstances that made the salary an object. The regular editor of the paper was going off for a holiday, and I accepted the terms he offered, and took his place.

The sensation of being at work again was luxurious, and I wrought all the week with unflagging pleasure. We went to press, and I waited a day with some solicitude to see whether my effort was going to attract any notice. As I left the office, towards sundown, a group of men and boys at the foot of the stairs dispersed with one impulse, and gave me passage-way, and I heard one or two of them say: "That's him!" I was naturally pleased by this incident. The next morning I found a similar group at the foot of the stairs, and scattering couples and individuals standing here and there in the street, and over the way, we eying me with interest. The group separated and fell back as I approached, and I heard a man say: "Look at his eye!" I pretended not to observe the notice I was attracting, but secretly I was pleased with it, and was purposing to write an account of it to my aunt. I went up the short flight of stairs, and heard cheery voices and a ringing laugh as I drew near the door, which I opened, and caught a glimpse of two young, rural-looking men, whose faces blanched and lengthened when they saw me, and then they both plunged through the window, with a great crash. I was surprised.

In about half an hour an old gentlemen, with a flowing beard and a fine but rather austere face, entered, and sat down at my invitation. He seemed to have something on his mind. He took off his hat and set in on the floor, and got out of it a red silk handerchief and a copy of our paper. He put the paper on his lap, and, while he polished his spectacles with his handkerchief he said:

"Are you the new editor?"

I said I was.

"Have you ever edited an agricultural paper before?"

"No," I said, "this is my first attempt."

"Very likely. Have you had any experience in agriculture, practically?"

"No, I believe I have not."

"Some instinct told me so," said the old gentleman, putting on his spectacles and looking over them at me with asperity, while he folded his paper into a convenient shape. "I wish to read you what must have made me have that instinct. It was this editorial. Listen, and see if it was you that wrote it:

"Turnips should never be pulled—it injures them. It is much better to send a boy up and let him shake the tree.

"Now, what do you think of that?—for I really suppose you wrote it?"

"Think of it? Why, I think it is good. I think it is sense. I have no doubt that, every year, millions and millions of bushels of turnips are spoiled in this township alone by being pulled in a half-ripe condition, when, if they had sent a boy up to shake the tree——."

"Shake your grandmother! Turnips don't grow on trees!"

"Oh, they don't, don't they? Well, who said they did? The language was intended to be figurative, wholly figurative. Anybody, that knows anything, will know that I meant that the boy should shake the vine."

Then this old person got up and tore his paper all into small shreds, and stamped on them, and broke several things with his cane, and said I did not know as much as a cow; and then went out, and banged the door after him, and, in short, acted in such a way as I fancied he was displeased about something. But, not knowing what the trouble was, I could not be any help to him.

Pretty soon after this a long, cadaverous creature, with lanky locks hanging down to his shoulders and a week's stubble bristling from the hills and valleys of his face, darted within the door, and halted, motionless, his finger on lip, and head and body bent in listening attitude. No sound was heard. Still he listened. No sound. Then he turned the key in the door, and came elaborately tip-toed towards me, till he was within long reaching distance with me, when he stopped, and, after scanning my face with intense interest for a while, drew a folded copy of our paper from his bosom, and said:

"There—you wrote that. Read it to me, quick! Relieve me—I suffer."

I read as follows—and as the sentences fell from my lips I could see the relief come—I could see the drawn muscles relax, and the anxiety go out of the face, and rest and peace steal over the features like the merciful moonlight over a desolate landscape:

The guano is a fine bird, but great care is necessary in rearing it. It should not be imported earlier than June nor later than September. In the winter it should be kept in a warm place, where it can hatch out its young.

It is evident that we are to have a backward season for grain. Therefore, it will be well for the farmer to begin setting out his corn-stalks and planting his buckwheat cakes in July instead of August.

Concerning the Pumpkin.—This berry is a favorite with the natives of the interior of New England, who prefer it to the gooseberry for the making of fruit cake, and who likewise give it the preference over the raspberry for feeding cows, as being more filling and fully as satisfying. The pumpkin is the only esculent of the orange family that will thrive in the North, except the gourd and one or two varieties of the squash. But the custom of planting it in the front yard with the shrubbery is fast going out of vogue, for it is now generally conceded that the pumpkin, as a shade tree, is a failure.

Now, as the warm weather approaches, and the gardens begin to spawn——

The excited listener sprang towards me, to shake hands, and said:

"There, there—that will do! I know I am all right now, because you have read it just as I did, word for word. But, stranger, when I first read it this morning I said to myself, I never, never believed it before, notwithstanding my friends kept me under watch so strict, but now I believe I *am* crazy; and with that I fetched a howl that you might have heard two miles, and started out to kill somebody—because, you know, I knew it would come to that sooner or later, and so I might as well begin. I read one of them paragraphs over again, so as to be certain, and then I burnt my house down and started. I have crippled several people, and have got one fellow up a tree, where I can get him if I want him. But I thought I would call in here as I passed along, and make the thing perfectly certain; and now it is certain, and I tell you it is lucky for the chap that is in the tree. I should have killed him, sure, as I went back. Good-by, sir, good-by—you have taken a good load off my mind. My reason has stood the strain of one of your agricultural articles, and I know that nothing can ever unseat it now. *Good*-by, sir."

I felt a little uncomfortable about the crippling as and arsons this person had been entertaining himself with, for I could not help feeling remotely accessory to them; but these thoughts were quickly banished, for the regular editor walked in! [I thought to myself, Now if you had gone to Egypt, as I recommended you to, I might have had a chance to get my hand in; but you wouldn't do it, and here you are. I sort of expected you.]

The editor was looking sad, and perplexed, and dejected. He surveyed the wreck which that old rioter and these two young farmers had made, and then said:

"This is a sad business—a very sad business. There is the mucilage bottle broken, and six panes of glass, and a spittoon and two candlesticks. But that is not the worst. The reputation of the paper is injured, and permanently I fear. True, there never was such a call for the paper before, and it never sold such a large edition or soared to such celebrity; but does one want to be famous for lunacy, and prosper upon the infirmities of the mind? My friend, as I am an honest man, the street out here is full of people, and others are roosting on the fences, waiting to get a glimpse of you, because they think you are crazy. And well they might, after reading your editorials. They are a disgrace to journalism. Why what put it into your head that you could edit a paper of this nature? You do not seem to know the first rudiments of agriculture. You speak of a furrow and a harrow as being the same thing; you talk of the moulting season for cows; and you recommend the domestication of the polecat on account of its playfulness and its excellence as a ratter. Your remark that clams will lie quiet if music is played to them, was superfluous. Nothing disturbs clams. Clams *always* lie quiet. Clams care nothing whatever about music. Ah, heavens and earth, friend, if you had made the acquiring of ignorance the study of your life, you could not have graduated with higher honors than you could to-day. I never saw anything like it. Your observation that the horse-chestnut as an article of commerce, is steadily gaining in favor, is simply calculated to destroy this journal. I want you to throw up your situation and go. I want no more holiday—I could not enjoy it if I had it. Certainly not with you in my chair. I would always stand in dread of what you might be going to recommend next. It makes me lose all patience every time I think of your discussing the oyster-beds under the head of "Landscape Gardening." I want you to go. Nothing on earth could persuade me to take another holiday. Oh, why didn't you *tell* me you didn't know anything about agriculture?"

"*Tell* you, you cornstalk, you cabbage, you son of a cauliflower! It's the first time I ever heard such an unfeeling remark. I tell you I have been in the editorial business going on fourteen years, and it is the first time I ever heard of a man's having to know anything in order to edit a newspaper. You turnip! Who wrote the dramatic critiques for the second-rate paper? Why, a parcel of promoted shoemakers and apprentice apothecaries, who know just as much about good acting as I do about good farming and no more. Who review the books? People who never wrote one. Who do up the heavy leader on finance? Parties who have had the largest opportunities for knowing nothing about it. Who criticise the Indian campaigns? Gentlemen who do not know a war-whoop from a wigwam, and who never have had to run a foot-race with a tomahawk or pluck arrows out of the several members of their families to build the evening camp-fire with. Who write the temperance appeals and clamor about the flowing bowl? Folks who will never draw another sober breath till they do it in the grave. Who edit the agricultural papers, you—yam? Men, as a general thing, who fail in the poetry line, yellow-covered novel line, sensation-drama line, city-editor line, and finally fall back on agriculture as a temporary reprieve from the poor-house. *You* try to tell me anything about the newspaper business! Sir, I have been through it from Alpha to Omaha, and I tell you that the less a man knows the bigger noise he makes and the higher the salary he commands. Heaven knows if I had but been ignorant instead of cultivated, and impudent instead of diffident, I should have made a name for myself in this cold, selfish world. I take my leave, sir. Since I have been treated as you have treated me, I am perfectly willing to go. But I have done my duty. I have fulfilled my contract, as far as I was permitted to do it. I said I could make your paper of interest to all classes, and I have. I said I could run your circulation up to twenty thousand copies, and if I had had two more weeks I'd have done it. And I'd have given you the best class of readers that ever an agricultural paper had—not a farmer in it, nor a solitary individual who could tell a watermelon from a peach-vine to save his life. You are the loser by this rupture, not me, Pie-plant. Adios."

I then left. [*Galaxy for July.*

SERICULTURE.

Extracts from the Half-yearly Report of the Yokohama General Chamber of Commerce, July, 1868

The Chamber of Commerce of Yokohama has been requested by the silk merchants of Europe and America to communicate to the silkmen of Japan several complaints regarding the silk exported from this country. Their complaints are as follows:

1. The quality of the Japan silk is getting worse every year.

2. Large quantities of silk produced in Oshiu, Koshiu, and other countries, are made up in hanks so as to be sold as Mayebashi and Shinshiu silks;

3. A great quantity of hank sink wind badly, thereby causing great loss to the buyer.

4. The paper ties of the hank silk are too heavy.

There is a great variety of cocoons of Japan; they are not all of them fit to be reeled into fine silk, and the silks produced in different countries of Japan are applied by the manufacturers of Europe to different purposes.

Formerly the silk of each country was made up in a particular manner, so that each foreign manufacture was able to choose the quality which suited his requirement: but now he is frequently deceived, because a great variety of silk are made up in hanks. Formerly a great many Japan silks were firm, clear, and strong—some of them were very fine and regular in size; but now it appears that the Japanese reelers mix the bad and good colors together, and reel them without the proper care. The result is that the silk is foul, irregular in size, and that the color of it is bad.

Formerly the Japan silks, and particularly the hank silks, used to wind very well, so that the loss in weight to the trowster was very small. Now it frequently happens that certain hank silks lose as much as 20, and even 50, per cent. on account of bad winding. In some cases the threads are so interlaced that the silk cannot be wound at all, and must be sold as waste silk. Some masters of these bad hanks have been returned from Europe to Yokohama. They are exhibited in the room of the Chamber of Commerce, and all Japanese silkmen are invited to look at them. Last year the Chamber of Commerce complained of the heaviness and irregularity of the paper ties of the hank silks. Since then some improvement in this respect has been noticeable. Still the ties are occasionally found in weight as much as 20 per cent., and even 40 per cent., whilst they should not exceed two or three per cent. It is true also that the disease of the silkworms has diminished the silk crops of some countries of Europe. For this reason foreigners have paid for the Japan silks high prices as long as they were good; but now they are neglected by the manufacturers on account of their inferiority. The disease of the silkworms cannot last forever; when it is cured can foreigners be expected to buy bad silk in Japan whilst they produce good silk in their own countries?

The Chinese produce large quantities of good silk. They have formerly been accustomed to reel it coarse, but now they reel some quantities very fine, and imitate the hank silks of Japan. Is it to the interest of the Japanese to deteriorate their silks whilst the Chinese are improving their own? It is certain that Japan silk is gradually losing the reputation which it had acquired at at first? Therefore, the Chamber of Commerce of of Yokohama urges upon the Japanese silkmen to take the above into serious consideration.

A Good Law

Orders has been issued that all saloons must be closed, and no blinds used on the Sabbath; cigar and confectionery stores must also be closed, and the standing or playing on the corners will not be tolerated. Any officer failing to enforce these laws will receive his discharge.—*Butte Record, June* 11th.

CAST-STEEL DAIRY KNIVES

WE HAVE RECEIVED INVOICES OF THE CELEBRATED

Cast-Steel Dairy Knives,

Manufactured by D. G. Young of New York. We have them of all sizes, from those of FOUR BLADES to cut FIFTEEN INCHES, up to THIRTEEN BLADES to cut TWENTY INCHES.

These Knives are of very great advantage to Dairymen, and are worthy their attention.

For sale by WARREN & CO., "Farmer Office," 330 Clay Street, up stairs

DOMESTIC POULTRY—PURE BLOOD

Pigs, Dogs, Etc.

THOSE who desire to secure Pure Stock of Domestic Poultry are invited to visit our Poultry Yards, and see the varieties or themselves.

We have the following, raised by our ourselves, and noticed Pure Fowls:

LIGHT BRAHMAS, WHITE LEGHORNS, DARK BRAHMAS, BUFF COCHINS,

—ALSO—

Aylesbury Ducks---Bronze Turkeys.

These Ducks and Turkeys are New Varieties of great excellence. The Turkeys are said to weigh 20 or 30 pounds each.

We have perfected arrangements abroad, so that we can supply any breed of Fowls, Pigeons, Rabbits, Dogs, Pigs, etc., or any kind of small Stock to be procured in the old States or Europe, and supply them at lowest terms.

Those interested in Stock that desire to procure or gain information about Domestic Ais, should Apply to

NICHOLS & WILLARD, FRUIT VALE AVENUE, BROOKLYN, CAL.

OIL CAKE MEAL

THE BEST FEED KNOWN FOR LIVE STOCK

WE DESIRE TO CALL ATTENTION TO OIL CAKE MEAL, which we are now manufacturing. This description of feed as greatly promotes the health of animals as Oil Cake Meal, and we urgently request all engaged in the dairy business, raising and fattening stock, or in growing, to give it a trial, feeling confident that they will find it of very great value. By those who have used it, it is thought ONE pound is pronounced to be equal to one pound of Corn Meal; and in the United States Government Report of the Department of Agriculture for 1868, it stands in the following relation to other feeds as to the percentage of flesh produced from a hundred pounds of feed, viz: Oil Cake Meal, 18 per cent; Corn Meal, 11 per cent; Barley Meal, 13 per cent; Rye Meal, 18 per cent; Oil Cake Meal, $2 100 per cent. For fattening properties to all stock are [illegible] to guard against bad weather or over-driving. For no equal.

For MILCH COWS particularly valuable, increasing the quantity of milk and [illegible] to a much greater extent than any feed known. A suitable quantity for them at the commencement is one quart in the morning and one quart at night, either alone or mixed with any other feed, generally mixed with the meal of bran, oats, corn or any feed of any kind. It improves it to soak it for six or eight hours, the effect being to increase its bulk two or three times. The quantity can be increased gradually, according to the effect produced—ordinarily not exceeding three or four quarts per day.

FOR BEEF CATTLE it has fattening properties which cannot be found in any other feed—the beef always more tender and juicy and of a much finer quality when fattened on any other feed and no feed known will quickly prepare animals for market as Oil Cake Meal.

FOR HORSES a small quantity given daily promotes the health, and is especially valuable for them when [illegible] injured from over-driving. It is one of the best [illegible] known for Horses subject to the Heaves or Broken-[illegible] and greatly increases the cleanliness and evenness and [illegible] almess of the hair.

FOR SHEEP there is no article of food known that [illegible] duces such fine mutton or so promotes the growth of [illegible] A small quantity given to chilled Cattle or Sheep will [illegible] them alive and greatly increase their warmth and vitality.

At present price ($25 per ton,) it is the cheapest feed in market. It is now selling in New York at $47 per ton, [illegible] at $50 per ton in England, where it has been [illegible] long time to be in every respect the most [illegible] known for stock of all kinds—one ton being fully equal to three tons of bran.

The increasing demand for this meal from those [illegible] coast by whom it has been thoroughly tested, has led [illegible] to increase our facilities for its manufacture, and we are [illegible] fully prepared to furnish it in quantities as may be [illegible] For sale by the Grain and Feed Dealers, and at the Manufactory, King street, near Third. All orders will receive prompt attention. Address—

EXPECTATIONS REALIZED.

BY PROF. KEEN EYE.

Well yes, it may be called by that name. My practice has been to read over carefully all papers that come, and anything that looks practical to me, I give it a trial."

"I hain't much faith in't anyhow. Why, there's Squire Biggins, he came along by my garden a year ago and I seen him a looking very closely at my cabbages and truck patch. You see I take a little pride in them'ere things. Says he, 'What makes the difference in them'ere cabbages and yourn?' I see the north end of the rows are a good deal the best?'"

"Well," says I, "I don't know unless it is because I had the old cow's yard in that'ere corner of my yard for a year or two, and when the stuff was planted, my conscience, how the weeds grew there; why, I had to hoe the ground two or three times over where I hoed the other end of the row once, and when it came that dry spell, I spoiled my hoeing it so much to keep them pesky weeds down, kinder loosened up the soil, while the other part was as hard as a brick. But this, you see, I thought It did more harm than good, for the rain when it came dried right up, while on the hard ground it laid two or three days. So what do you think the Squire done but go and read the whole thing in the *Practical Farmer*, and showed it to me arterwards."

"Well, what did he write?"

"Oh, he went on a long lingo about pulverizing the soil, and evaperashun, and the arths drinking in the moister and the little roots penetratin through the ground, and a lot of such trash, which I call nothing but book farmin and gardenin, but I must go, neighbor. Good morning."

"Good morning."

The winter following this conversation passed gayly, but our friend Richard was not idle. He had William plow his ground all nicely that fall, and made arrangements with him to haul manure on to his little field through the winter. He enquired of different grocerymen in the villages about the sale of vegetables and fruit, and learned all about what there was a good demand for, with a short supply. He corresponded with different nurserymen about plants, prices, &c., made enquiries among his neighbors as to what sort they had planted, and what had proved the best. Learned all he could about their firmness, certainty about fruiting, time of ripening. Took an occasional stroll among the farmers, and enquired about their experience with potatoes—earliness &c., Kept a note book, and made a minute of every little item of value. All this done evenings, after his regular work hours.

"Wife," he says, "I am fully convinced, with my means, that I had better not reserve too much ground for experiment on the first year, I have concluded that one-fourth to one-half acre is all I dare venture on the first year, putting in the balance to some ordinary crop like potatoes. The more enquiries I make, and the more I study into this business of growing fruits and vegetables, the more intricate I find it. Pick up a nurseryman's catalogue and read the descriptions of fruits, and you would think that you must have every kind, for all of them seems to have the valuable characteristics, and the prices of some are perfectly exhorbitant. I find neighbor Smith says, the Downer's Prolific is a superior fruit with him, while his next neighbor, Brown, says they all run to vine and bear no fruit, besides they get early. Smith says too, the Triomph de Gand is worthless with him, while Brown claims it as *par excellence*. One claims that the Wilson is not fit to feed to hogs, the other says it is the king of Strawberries."

"Yes, husband, but don't you suppose soil and cultivation has something to do with it? I read not long since that the Downer would not fruit well on rich, heavy soil, that it would run too much to vine, and that the Triomph de Gand wanted very rich soil and grown only in hills."

"Well, I believe there is something in that, for Smith told me that he did not manure his ground highly, while Brown does. It does seem to me, however, that it is better to get the ground in a high state of cultivation and then grow those large, magnificent kinds that succeed on such soil. You will remember what Triomph de Gand and Wilson we used to see on the stands in Broadway?"

"Oh yes, warn't they beauties?"

"Yes, and how quickly they sold, and for what exorbitant prices. I saw an account that those berries were raised three hundred miles from the city and grown entirely by the hill system, and heavily mulched."

"But don't you suppose that you could raise as large as those were?"

"Ah! but the man that grew them knew his business, and had the land that was just adapted to them. No, I shall work slowly into it, plant slightly and experiment but little, as you know our means are small. It may be that I shall not take a liking to it. My intention is to keep right on in the employ of Wilson & Co., endeavoring to fulfill all my engagements with them and give perfect satisfaction, and the first season occupy all of my spare time in working in our little garden—trying just a few sorts, watching them closely and visiting our neighbors and one or two persons who make fruit growing a specialty, learning all can."

Before spring opened Richard had made all necessary arrangements for seed, plants, &c., and purchased from a party he had been recommended to, a few hundred of the leading kinds of strawberry, raspberry, and blackberry plants, with a few grapes, currants, gooseberries, &c., &c.

FLOWER GARDER.

FLOWERS.

All love them, the young and old, the rich and the poor; not even to the humblest need the great enjoyment of having a few plants to cherish be denied; for they thrive as well in the cracked cup on the window sill of the poorest, as in the porcelain vases of the wealthy. Even the most humble can scrape together a little earth, a few seeds, and brighten their rooms with the pretty things; or they can go to the woods and bring home the wild ones with care and tenderness, they will soon repay them, and hold up their pretty heads with the proudest and rarest of flowers in the land.

God made them for all his children; in the darkest hovel some leaf or flower will grow, and the care of them is pleasure and profit of both mind and body.

Let your paths and walk be bordered with appropriate flowers and plants; the latter are preferable, their beautiful and variegated foliage making a very pretty show. Seek rather to have those that bloom freely and grow vigorously, than to have a great variety; for by this very little satisfaction can be obtained, as many of them possess no distinctive character or color, however pretty or curious they may be to the botanist.

Novices in Floriculture should only buy plants that have been well tested. It is discouraging, after spending time and money, to have a sickly tray of plants, when, profiting by the experience of others, they might have had bright and beautiful ones; better have a few whose wants and habits we understand, than an array of miserable, half developed specimens.

Flowers, like the children, need the warmth and the sunlight, let them have the benefit of the sun's rays. Do not imagine they are unhealthy companions in your room; this is a mistaken notion; they are perfectly harmless in sleeping room or parlor. Fill your hanging baskets, beautiful vines creep round your windows and doorways. Windows filled with plants, flowers, and hanging baskets, have an irresistible charm for all, and their cost is trifling. Even the sweet potatoe vine will twine lovingly and look the prettiest of ornaments; and the ivy, which is one of the most cultivated creepers for the door or out-door growth, for no matter how low or shady and close a room may be, it is sure to flourish. The Madeira vine is a very beautiful plant for climbing over porches, hiding up ugly pieces of fence, etc. bearing a beautiful, fragrant white flower.

Every housewife should have a few flowers to cherish and love. It would lighten her hard labor, and sooth her cares—to give them a look, a thought, a drink of water, attend to the flowers, they have a soothing, calming influence.

"'Twas God for flowers,
For the bright, gentle, holy thoughts they breathe
Faom out their odorous beauty, like a wreath
Of sunshine to life's hours."

Give the children a little garden patch, and cultivate in them a love for flowers; it will influence them to be kind and gentle, and lead their thoughts to higher and purer aims.

God might have made the earth bring forth
Enough for great and small—
The oak tree and the cedar tree
Without a flower at all.

He might have made enough, enough
For every want of ours
For luxury, medicine and toil,
And yet have made no flowers.

Our outward life requires them not;
Then wherefore had they birth?
To minister delight to man—
To beautify the earth.

To whisper hope, to comfort man,
Whene'er his faith is dim;
For whoso cares for the flowers,
Will care much more for him.

BOUND VOLUMES FARMER

☞ Volumes of the "California Farmer" for The last EIGHT YEARS, uniformly bound, can be had at the Farmer Office at $8 per Volume.

These Eight Volumes contain more useful matter touching the practical workings of Agriculture as adapted to California Culture than any Book or Books Extant, as they comprise hundreds of Experiments, Letters and Essays upon the Culture of Cotton, Rice, Coffee and Tobacco; Grapes, Strawberries, and all other Fruits, with the Culture of Hops Castor Beans, Flax, Hemp, &c. and the Whole series of Essay of L. Prevost on Silk Culture, from early beginning.

This set of Volumes would be a Library of itself and is valuable to the Cultivator of the Soil.

Orders sent to Farmer Office will be promptly attended to

VALUABLE PLANTS FOR SALE.

☞ Persons who are desirous of securing a few very choice and pretty specimens of rare PLANTS IN POTS can be suited at the gardens of the subscribers, where strong and HEALTHY PLANTS, of all kinds, can now be had in any quantity.

These plants and vines are of our own growing, and we have taken the greatest care to grow the best kinds, and to so cultivate as to make them hardy in their nature.

These plants have been raised in the open air, exposed to the sun and drying winds, so as to give them vigor, and when removed to other places, to gardens in the country, or to conservatories or to parlor windows, for house cultivation—they will prove strong and healthy, and be sure to flourish and grow far better than plants that have been raised in green-houses and grown weak and tender.

We invite our Subscribers and Patrons, all who wish collections of CHOICE PLANTS, VINES and SHRUBS to call on us and see our collections, and we will offer them great inducements to purchase of us. WARREN & CO.,
Farmer Office.

MIXED LAWN-GRASS, ETC.

For sale at the "FARMER" OFFICE

Advertising Abroad!

WE CALL THE SPECIAL ATTENTION OF ALL Manufacturers, Agricultural Men, Nurserymen, Booksellers, and others having interests connected with the PACIFIC COAST, that now is the time to secure the business of this region by wisely ADVERTISING WITH US.

The full effects of the completion of that Grandest of all HUMAN ENTERPRISES, the PACIFIC RAILROAD, must open a large and wonderfully increased business between the Eastern States and the Pacific Coast, and they who wisely ADVERTISE NOW, will be the FIRST TO SECURE IT, and when once secured, they can HOLD ON TO IT.

We therefore invite all those who have valuable IMPLEMENTS, MANUFACTURES, INVENTIONS, BOOKS, PAINTINGS, etc. to the Columns of the CALIFORNIA FARMER, that will give them a wider circulation than any other medium they can adopt.

WARREN & CO., Eds. and Prop's.

20,000 NEWSPAPERS.

We have TWENTY THOUSAND Newspapers—Newspapers of the largest size among our Exchanges, suitable for WRAPPING PAPER for Dry Goods, Clothing, etc.

—ALSO—

TEN THOUSAND

Of the best Agricultural Papers known, comprising our various Agricultural Exchanges from all the Eastern States and Europe. Farmers who would like valuable reading matter, which contain choice Essays and Letters on Agricultural matters, can have these at low rates by the 100. Apply at FARMER OFFICE.

The California Farmer.

SAN FRANCISCO:

THURSDAY EVENING, JULY 7, 1870.

THE CALIFORNIA FARMER READING ROOM, AND MUSEUM OF NATURAL HISTORY.

320 Clay Street—Marble Building—Up Stairs.

FARMERS' HEADQUARTERS—FREE TO ALL.

The Editorial Rooms and Museum of the FARMER Office are always open, and an attendant ready to make a visit instructive to those who take an interest in the productions of our State. Samples of all productions—Grains, Grasses, Fruits, Models, Inventions, Minerals, and specimens in Natural History innumerable, are constantly being added.

FARMERS' READING ROOM.

Farmers and Mechanics, from the country, who visit San Francisco, should visit the Free Reading Room and Museum of the FARMER Office. Members of the Press and Strangers are particularly invited to avail themselves of these rooms. Newspapers from every State to which we have access by mails, as well as Foreign Newspapers, Periodicals, and Magazines, are upon file and on the tables for use; a Good Library of hundreds of volumes, with works illustrative of Agriculture, Horticulture, and Floriculture, works for reference upon all Sciences, with a Cabinet of Minerals, Coins, and Curiosities of interest to the Naturalist, to which we invite all.

TERMS OF ADVERTISING.

The charges for advertising in the CALIFORNIA FARMER, payable in advance, is TWO DOLLARS for five lines or less of space, in Nonpareil type, for one insertion, twenty cents a line for any larger space. Each subsequent insertion half these rates. This it is believed affords the cheapest and best medium of reaching the Agricultural community on this coast. As heretofore the right is reserved to reject any advertisement deemed objectionable.

SAMPLE COPIES.

☞ Those who receive a number of the FARMER with this paragraph marked, may understand that it is sent to them for their examination, hoping our paper will meet their approval and induce them to subscribe, and to ask their neighbors to subscribe also.

Send for Sample Papers and get up a club. Address

PUBLISHER CALIFORNIA FARMER,
San Francisco, Cal.

Editor's Chair,

[Here we shall hold our special weekly chat with our Readers and Correspondents, and here we shall call their attention to such articles in *each issue* to our *Journal*, to which we would direct their *special* attention.]

We invite our readers to our European Letter this week, it contains very important matters for the Farmer's interest, especially *the Feeding of Stock*, with other interesting matters.

Our *New York Letter* will be found full of interest to Californians. Our correspondent shows himself to be a *Genuine Californian*. His letters are always looked for with earnest interest, and many inquiries come to us, "when will the Professor come *Home to his Friends*.

Our readers should by all means read the *Greeley's Essays* there are many subjects of moment, especially *Feeding the Soil* and *Drainage*. His Letters are full of good counsel.

THE DONNER PARTY.

Having recently been over the spot near Donner Lake where this sad scene occurred we felt it a matter of interest to copy from our excellent "Overland," that sad story.

MARK TWAINS EDITORIALS.

Let all laugh and grow fat over his happy story.

FREEDOMS DAY.

A notice of the Celebration was crowded out this week, it was a glorious day and gloriously Celebrated, report next week.

NEW VOLUME.

The present issue will close Volume (33) Thirty-Three, and with the coming number our No. 1 of VOLUME THIRTY-FOUR will be issued. We hope to be remembered by those who have a little treasure for us, so that we can enter with more earnest on our *new Volume*. Will not those who are *our true friends* respond, and send us each one a *new subscriber* to our

VOLUME THIRTY-FOUR.

Acknowledgements.

Articles Received at the California Farmer Exhibition Rooms, No. 320 Clay Street.

BOOKS RECEIVED.

We have received the *Western Monthly*, a new periodical sent forth to herald the Intellectual and Social interests of the great Western States. The publication is of the same style of the *Atlantic* and our *Overland*, a handsome magazine, highly creditable. It is published by the Western Monthly Association, and under the auspices of S. C. Briggs & Co., Chicago.

AMERICAN WOMANHOOD. This is a volume from J. C. Jackson, Esq., M D., of the *Home on the Hill Side*, Dansville, N. Y., just such a volume as would be expected from so eminent a source—a most valuable book for every woman to read—full of gems of truth. Every woman should have it.

CRANBERRY CULTURE. A valuable book on this fruit by J. J. White, a practical grower, and a sensible series of directions for the culture of this most valuable berry. Published by Orange, Judd & Co., New York.

CATTLE, SHEEP AND GOATS.

We have a valuable Pamphlet just issued by Robert W. Scott, Esq, of Locust Hill Farm, Frankfort, Ky., with History, and Pedigree of Short Horn Durham Cattle. Improved Kentucky Sheep, Cashmere and Angora Goats, Swine, &c. This is the best and most complete catalogue yet set forth, issued in fine style, full and complete and highly creditable to this distinguished veteran breeder of valuable stock.

We acknowledge favors from Hon. Eugene Casserly, Washington, D. C., for valuable documents.

STATE AGRICULTURAL SOCIETY.

We have received the Premium List of the State Agricultural Society, for 1870. They announce a large array of Premiums, in amount to over Fifteen Thousand Dollars, but we regret they are issued at so late a day—being only eight weeks to the Fair Season, which commences Sept. 12th continuing a week.

A review of these Premiums show that many of them will never be competed for, probably not over one half can ever be called for.

A great oversight has been made by omitting entirely the Department of Floriculture. This cuts off entirely all the Gardeners and Florists of our State, who have always been ready to contribute, Plants, Flowers, and Decorations, and many fruits and flowers from their premises which add so much to the general appearance of an Exhibition Hall.

Having noticed that this oversight must prove injurious this year as it did the last year, we called on the Secretary and pointed out this great error. Secretary Beck, acknowleged it a great mistake, truly an oversight. And assured us if the Florists will rally and contribute, they shall have liberal premiums. However glad we are to try to correct this error toward the Florists, and to give them the promise of the Secretary of liberal Premiums, it is also necessary that there be sent forth, *officially*, a Premium List from the Society, so liberal as to secure the aid of Florists, before it be *too late*.

As there will assuredly be a very large number of visitors from the East all over our State, it is vitally important we should make extra exertions, so that our Fairs shall be proof of our great productiveness. If the Managers of our Fairs fail to make due preparations this Autum, they will greatly retard the coming of people to our State.

We are glad to know the Managers of our Steamers and Rail Roads, offer to take all products free, and passengers at half price.

Our State should make a grand show at our State Fair, and all our District Fairs also. This can be done if the Managers move with spirit and the *people will it*.

PRIZES AT OUR FAIRS.

The Prizes awarded at our State and District Fairs, has long been a subject of thought and discussion among the contributors and friends of these exhibitions, as to their value and appropriateness as incentives of action and labor with those who give their time and means to make these exhibitions what they should be, and to make them a credit to our State by bringing out the best display of the productions of the earth, and of the genius and talent among us.

Of late years the Premiums have been so small and insignificant when compared with the time and labor required to prepare for the Exhibition, and so small as compared with the merit of the contribution, that many persons have declined to take part in our Fairs.

There has also arisen a just cause of complaint in the large amount of appropriation to the Racing Track and so little to the Agricultural and the Mechanical Departments—that these two most important branches of our farms have greatly decreased in interest, which is greatly to be regretted, while our *Fruit* and *Flower Shows* have fallen far short of what they should be, and sometimes they are quite neglected Even at our last State Fair *no premiums* were offered at all for Floriculture, which neglect gave quite a slight to our Gardners, who are always ready and able to do much to make these Fairs interesting and attractive.

The Departments of HORTICULTURE, FLORICULTURE and AGRICULTURE, must receive more attention, and must have more liberal awards in premiums if Directors of our Fairs desire large shows and more successful Fairs. The time now is very short to make ready for these Exhibitions, and it is important that proper inducement be held out to exhibitors so as to make these Fairs successful.

Exhibitors are *not* satisfied with *Diplomas, Honorable Mention, Special Notice, &c.* They feel that if a mile race, or best *three* in *five* is worthy of *one two*, or *three hundred dollars* a Reaping Machine, a Mower, a Plow, a Wagon, a Carriage, or an exhibition of Grain or Vegetables, a fine display of Fruits or Flowers is equal to it, and should be equally encouraged—and should have as much attention and interest and thus make our Fairs more interesting.

Exhibitors also believe that if more substantial and enduring prizes were given, that if instead of small money prizes, Silver and Gold Medals and Silver Plate, of *Our Own California Work*, Valuable Books, Agricultural Journals and solid Testimonials of Merit, then our Exhibitions would be larger and better attended, and would be more interesting to the public and consequently more successful for each society.

We hope these matters will be acted upon speedly, as the season of Fairs is near to us and the time is short.

THE "PULLMAN CARS" WITHDRAWN.

Very much to the regret of all passengers on our Great Railway, the splendid Pullman Cars, the Sleeping, Palace, and Dining Cars are withdrawn from the Central Pacific Rail Road line—their last trip was made to-day.

We learn that the principal cause of this was the great wear and tear they caused to the Engines and the heavery ware on rails, by their immense weight, these cars being twelve tuns each.

The fates have so decided, and this great luxury must be given up. The last ride, the last sleep, and the last Dinner, has been enjoyed, and we must say Farewell! but nothing can take away the pleasure that has already been enjoyed.

An embryo astronomer is anxious to know whether the dog star is a Skye terrier, or only a tarrier in the sky?

VISITATIONS OF THE HORTICULTORISTS.

The Horticultural Delegation from the Eastern States, know as Col. Wilder and party have been very industrious during their stay in our State—they have not lost a moment of time, but have been faithfully devoted to the important investigations which they came to pursue, being the examination of the Orchards, the Vinyards, Nurseries and Gardens of California, so that they may make a just and faithful Report of the Horticulture of California as they find it.

We are confident from the high standing of the Gentlemen of this "Delegation of the American Pomological Society," from their high standing in this science, that their Report made in the East will be of more value to our State than all the efforts made by Emigration movements yet made or to be made, for the *facts* they will gather, and reports coming from these gentlemen will be believed, and will result in bringing to our State the very highest class of new comers, citizens of other States, with capital, man of families, men of reputation and of means, instead of a class of fortune hunters, or those that need aid and support. We thus speak because we feel confident that when such a Delegation visit our State it will do our State good, and we feel it our highest duty and pleasure to facilitate them in all their pursuits and labors, for *our State*, and our people are greatly benefitted thereby.

Since our last issue the Horticultural Delegation have visited the following places; they were then begining their tour in Napa.

They visited the fine Nursery and Orchards of Messrs Thompson & Son, at Suscol, of which they speak in the highest terms. Thence to the residence of R. B. Woodward Esq., at Oak Knoll, where as at Messrs Thompson & Sons, they were received in the most courteous manner, and here too delighted with the extensive and spacious grounds and orchards, and the excellent order in which they found everything. From thence to Calistoga, the Vinyards, Distilleries, Hot Springs, etc., at this famous place all of which from the great extent of the grounds and all appertaining to them, excited their surprise, and gave them still more insight into the wonderful resources of our State, climate, scenery, and productions, affording them the very highest degree of pleasure—several other Gardens and Vinyards in the vicinity were objects of notice and pleasure.

From thence to Sonoma, to the Buena Vista Wine Companies large Vinyards, here we spent some time to note its extent, to test the various Wines, and to collect the important data of the largest Vinyard in this section of our State. The Vinyards of Mr. Shaw of Gen. Vallejo, Major Snyder, Mr. Craig, Wm. Hood Esq., and others, were all places of great interest to them, and which will receive at their hands due notice.—From thence to the wonder of that section of California "The Geysers," of this they speak in the highest terms of admiration as a scene of grandeur and beauty, as well as wonder. From thence they returned to our city for a day of rest—the "Sabbath."

The opening of the present week, Monday was Freedoms Day, and this was highly enjoyed by by Col. Wilder and his friends, they all uniting in saying that it was the finest display any State ever made, and the Patriotism shown for the *Day* was all honor to our people, and gratifying to every Patriotic heart.

Tuesday a visit was made to Martinez, to the Vinyard and Gardens of Dr. J. Strentzel, the Gardens of the Alhambra. This visit we know was highly enjoyed by the whole delegation of Ladies and Gentlemen. The spot itself is an Eden, and the courteous manner with which the guests were received and entertained made the visit one of great pleasure. Aside from the great gratification enjoyed in seeing the extensive Vinyards, Orchards, and Grounds, which make this place so beautiful, the groves of Oranges, Lemons, Pomegranates, Figs, Olives, and other fruits in full bearing, made it one of peculiar interest to them, and a visit that will long be remembered.—Wednesday was given to Oakland—a visit to the University Grounds, to the splendid grounds of Mora Moss, Esq., Noina's, Lusks, Herrings and other Gardens, and a social gathering at the residence of Professor Carr. A day of interest and great gratification.

Thursday afternoon a trip in the Cars to the Capital of the State, via Vallejo and the Northen Pacific Rail Road, and to note the grain fields and the piles of grain along the Road at the Depots.—Grain enough says President Wilder, seemingly to supply our whole country.

Thus ends our week—we shal resume in our next.

FRUIT TRADE OVER THE RAIL ROAD.

At Sacramento this week we called at W. R. Strong's Fruit House, and found all busy in packing fruit for various places on the Rail Road, which shows that California Fruits will be known abroad and will soon be fully appreciated.

We give the places to which fruit were shipped by Mr. Strong in a single day.

Alta, Colfax, Washoe City, Virginia City, Winnemucca, Salt Lake City, Carson, Reno, Laramie City, Corrine, Ogden, and Omaha, and other days to other Stations along the entire route hence to Chicago.

Mr. Strong is sending exclusively to order weekly 20 to 30,000 lbs of Apples, Pears, Plums, and Apricots, by freight trains, and Cherries, Blackberries, and Strawberries, by Express. These with care and better experience, are now sent and reach their destination in good order.

A FORTUNE FOR EVERY WORKING MAN.

In the present great depression of trade and the consequent stagnation of those various enterprises which gives constant employment to our working men, this depression falls heavily upon the working classes and increases the cry of hard times, and in many cases the working men feels deep anxiety for the family that is dependent upon him for support, while those whose incomes are small are much troubled lest *sickness* or *death* should take them away from their families, and thus leave those who are near and dear to them destitute and dependent upon their friends, or the charity of this busy world. It is in cases like these that a way is easily opened whereby every working man—every man of small means, or persons better to do, may always have a FORTUNE ready for those they love in case of their sudden illness or death.

A LIFE INSURANCE POLICY.

In the safe is just as good as *Gold deposited in Bank*, in many cases it is far better, for it is a deposit that no temptation can lead the holder to speculate away. The man who has the *gold in hand*, alas! too often is tempted to speculate in Money, Stocks, Homestead Lots, or Lands, and his gold soon disappears, and with the loss and ruin too, often goes his courage and his manliness, and he goes forth a dispirited man, while his course from repeated speculations and losses is downward. But the man who has a good Life Policy for $5,000 or $10,000 knows that document is a DEED OF TRUST placed in the safe for his WIFE and CHILDREN and no temptation can allure him to jeopardize it, any wrong act on his part forfeits that trust, and he leads a better life for it.

But says the poor man, or the man of moderate means, how shall I secure that Policy of $5,000 or $10,000. Could I do so—could I but make such a provision for my family I should be the happiest man in the world, the very thought now that I might be sick or die and leave my family without support almost takes away my strength.

This is the very thing to which we wish to call the attention of the working men—the man of small means, and to show him how easy it is to make a good provision for his family and take off his mind all cause of doubt and uneasiness as to their future welfare and give to him a renewed strength for labor.

The truly industrious husband and wife in their anxiety for the future, (said a happy couple to us a few days since,) will and must always work hard and deny themselves and their children many things in order *to lay up for a rainy day* a certain sum in case of the sickness or death of the head of the family, and it is this sad truth that our earliest years are years of hard toil that makes the working man's lot so hard, and when dull times comes it presses on them with fearful severity, for it is in the future that looks to us dark in case of sickness and death, but we have resolved to work for *ten years hoping in that time* to save up a few hundred a year so, perhaps, in that ten years we may set aside for our children a little Gift at interest for them and then we shall be happy, and to this end we shall toil on and *deny ourselves* for our children sake until that thing is accomplished, and when that is done OH WON'T WE FEEL SO HAPPY? and the faces of that father and mother shone with love and affection. But said we to them, how would you feel could I show you an easy way by which you can have the $5,000 or $10,000 *deposited in the safe to-day for your children?*

The look of surprise with which this fact was presented to them made us *feel* the value of such a boon—as they quickly said: Oh, how happy! Oh, what a relief it would be to us; we really think we should live *Twenty years longer*. To know such a provision was made for my family, said the husband, would nerve my arm and strengthen my heart and make my daily toil sweet and pleasant.

Now this is the very *grand truth* we wish to lay before every working man in the land, for every working man has it in his power to provide thus for his family at once, and to enjoy life and the fruit of his labors, and not keep toiling on for *ten years*, setting aside $200, $300 or $400 per year in order to get his $5,000 for a future time, and while doing so denying himself and his family those enjoyments, comforts and even necessaries of life, and the way to secure this fortune of which we speak is

A LIFE POLICY.

This "Life Policy" can be had now in our Pacific Mutual Life Insurance Company "on such easy and favorable terms that the cost is scarcely felt, and when thus wisely secured and deposited, the husband and father has his mind at rest, for his family is provided for in case of his own death.

Now see the difference between this toiling on for *ten years* to save up a few hundred per year, a life struggle of anxiety lest the object should not be attained, if sickness comes the anxiety is deeper, and often that fear makes the sickness fatal. Whereas the relief of knowing there is a *sacred deposit* for those dear to him *if* he dies, sweetly relieves him, and he recovers—so also any temporary illness or disappointment. Besides the cost of this Policy is not $300 or $400 per year—only a portion of it, and the balance can be enjoyed with his family, the education of his children, a summer recreation, the improving and beautifying his Home with *Garden flowers*, Books, Pictures, &c, and thus *living a life* of home happiness. All this from wisely using the excellent plan of Life Insurance as now presented by the Pacific Mutual Life Insurance Company—a *Home Company* to which Californians should by all means give the preference, thus sustaining our own Home Industry and keeping the means of our State for building up our own STATE.

We give some statistics of the success of this Company which makes a Life Policy in it so much the more safe and valuable than any foreign policy in case of loss. This Company always meeting their obligation with remarkable promptness.

The business of this Company now for less than two years has been over *five and a half millions of Dollars*.

Receipts the last year,	$324,363.
Gross assets, Jan. 1, 1870,	673,261.47

The Ratio of *Expense* for Insurance in this Company is less than any Company known.

The Ratio of *Income* is greater for the assured than any Company known.

The Responsibility for the insured, according to the assets, is greater than any Company known.

All these facts are established by the Reports which can be had at the office of the Company. They should be read by all persons.

HOP RAISING.

How few even of our own "Hop growers," are aware of the value of the trade in Hops that could be made between California and England, by a judicious plan of cultivation and curing the same.

It will be remembered that this Journal has repeatedly given the full directions for the planting, cultivation, curing, packing, and shipment of Hops. Yet up to the present time, while California could grow and ship one hundred thousand bales, there was only grown, about three thousand bales the last year.

We have recently been called upon by T. Waterman, Esq., of the House of Waterman & Co., Eng. Merchants of London, who also have a House at Nuremburg, and at Bavaria, who have given us some of the reasons why our Hop raisers are not more successful in Hop raising, and why they do not realize better prices for their Hops.

Mr. Waterman informs us that there is great opposition to our California Hops East, or rather jealousy on account of their superiority, the frequently old Hops, Eastern, are mixed with ours, and marked "California," thus injuring our reputation. Whereas our Hops are superior in flavor, and quality, and are really worth in London at the present time, 23 to 25 cents, while they only realize here, 8, 12, or 15 cents at most.

The cost of freight of Hops over the Rail Road to New York, thence to London would not exceed with all other expences 5 cents—leaving a handsom profit margin above our highest price. And as to the extent of the English Market, England would purchas of California, Two Hundred Thousand Bales annually.

Hops could be shipped from California to Liverpool or London, via Rail Road, in 25 days—the market rate of No. 1 Hops, present date is, 14 & 15s, per cwt. of 112lbs, about 25cts.

We sincerely hope our Hop growers will give more attention to the cultivation of Hops and learn the kind of soil best adapted to Hops, as the soil materially affects the quality of Hop, and the quantity grown also. One thing is certain, England *will take* all the Hops California can raise. The small Hop however is the best, strongest and most desirable for the English Market.

RAILROAD PASSAGE AND FREIGHT.

The opponents of our Railroad, those who love to cry out Monopoly! Monopoly! do not always give credit to Railroad Companies when they do a liberal act for the people, but they only look on the one side, the chance to find fault.

The recent visitation of the Teachers of our Public Schools to their friends East, gave an opportunity to the Directors of the Railroad to bestow a Boon upon worthy people, and the reduction in price was equal to many thousand dollars, so the favors bestowed upon many distinguished citizens, now visiting our State. All these things we look upon as evidence of a liberal spirit, which should be duly appreciated, for such favors are bestowed thus upon the ready, their influence when they come to us and return makes known the resources of our State, and thus a great *public benefit*, and this should stay the mouths of these continual fault-finding creatures

SHIPPING FRUIT EAST.

Just as we have all along said, that the Railroad Directors would act *liberally*, they now offer to take *fruit* on their regular trains at the reasonable rate of $500 per car, and will *prepare cars* to carry it safe—or they will send it on express cars at $950 per car. This is only $50 per ton (2000 lbs., (2½ cents per lb.) on $95 per ton (freight pennue 9½ cents per lb.). This we esteem a favor and we hope it will be justly regarded.

Nothing now remains for a profitable trade in fruit, but the foolish dabbling in this trade by those who are ignorant of its risks, and who will take hold of it as a "Lottery" to take the chance—to all such they will draw *blanks* instead of disappointments.

FAIRS THIS YEAR.

We are frequently requested from different parts of the State to send the writers of letters to us a list of all the Fairs of the State. This we are always ready to do as soon as they are announced.

Up to the present date there has been no such list of Fairs nor any Premium list sent forth, and the month of July is now with us. This we consider a very great error on the part of the managers, as this delay must materially retard the progress of our Fairs—contributors having no guide to go by.

In order to have a successful Fair, the PREMIUMS, and the RULES AND REGULATIONS should be published at least *six months* in advance of the Fair.

We beleive the following Fairs will be held this Year.

The State Fair, at Sacramento.
The Northern District Fair, Marysville.
The San Jauquin District Fair, Stockton.
The Santa Clara Co., Fair, San Jose.
The Sonoma Co. Fair, Petaluma.
The Butte Co. Fair, Chico.
The Alameda Co. Fair, Haywards.

We shall be very grateful if the Secretary of each Society will keep us advised by sending us a full list.

WHAT I KNOW OF FARMING.

BY HORACE GREELEY.

ESSAY NUMBER TWENTY-FOUR.

FRUIT TREES—THE APPLE.

If I were asked to say what single aspect of our economic condition most strikingly and favorably distinguished the people of our Northern States from those of most if not all other countries which I have traversed, I would point at once to the fruit trees which so generally diversify every little as well as larger farm throughout these States, and are quite commonly found even on the petty holdings of the poorer mechanics and workmen in every village and in the suburbs and outskirts of every city. I can recall nothing like it abroad, save in two or three of the least mountainous and most fertile districts of northern Switzerland.—Italy has some approach to it in the venerable olive trees which surround or flank many, perhaps most, of her farm houses, upholding grape vines as ancient and nearly as large as themselves: but the average New England or Middle State homestead, with its ample Apple orchard and its cluster of Pear, Cherry and Plum trees surrounding its house and dotting or belting its garden, has an air of comfort and modest thrift which I have nowhere else seen fairly equalled. Upland Virginia and the mountainous portion of the States Southward of her, may in time surpass the most favored regions of the North in the abundance, variety and excellence of their fruits; for the Peach and the Grape find here a congenial climate, while they are grown with difficulty, where they can be grown at all, in the North; but, up to this hour, I judge that our country North of the Potomac is better supplied with wholesome and palatable tree fruits than any other portion of the earth's surface of equal or nearly equal area.

On the whole, I deem it a misfortune that our Northern States were so admirably adapted to the Apple and kindred fruit trees that our pioneer forefathers had little more to do than bury the seed in the ground and wait a few years for the resulting fruit. The soil, formed of decayed trees and their foliage, thickly covered with the ashes of the primitive forest, was as genial as soil could be; while the remaining woods, which still covered seven-eighths of the country, shut out or moistened the cold winds of Winter and Spring, rendering it less difficult, a century ago, to grow fine peaches in Southern New Hampshire than it now is in Southern New York. Devastating insects were precluded by those great, dense woods from diffusing themselves from orchard to orchard as they now do. Snows fell more heavily and lay longer then than now, protecting the roots from heavy frosts, and keeping back buds and blossoms in Spring, to the signal advantage of the husbandman. I estimate that my Apple trees would bear at least one-third more fruit if I could retard their blossoming a fortnight, so as to avoid the cold rains and cutting winds, often succeeded by frosts, which are apt to pay their unwelcome farewell visits just when my trees are in bloom or when the fruit is forming directly thereafter.—Hence I say to every one who shall hereafter set an orchard, Give it the northward slope of a hill if that be possible. Other things being equal, the orchard which blossoms latest will, in a series of years, yield most fruit, and will be most likely to bear when the Apple crop of your vicinity proves a failure. I do not recomend strong ice to plant or bury under the trees in April, for that involves too much labor and expense; yet I have no doubt that even that has been and sometimes might be done with profit. In the average, however, I judge that it would not pay.

In locating and setting an orchard, the very first consideration is thorough drainage. Nothing short of a destructive fire can be more injurious to an Apple tree than compelling it to stand throughout Winter and Spring in sour stagnant water. Barrenness, dead branches, and premature general decay, are the natural and righteous consequences of such crying abuse. There are many reasons for choosing sloping or broken ground for an Apple orchard, whereof comparative exemption from frost and natural facility of drainage are the most obvious. A level field, thoroughly underdrained to day, may, through neglect and the mischief wrought by burrowing animals, have become little better than a morass thirty years hence; but an orchard set on a tolerably steep hillside is reasonably secure against wet feet to the close of its natural life.

A gravelly or sandy loam is generally preferred for orchards, yet I have known them to flourish and bear generously on heavy clay. Whoever has a gravelly field will wisely prefer this for Apples not merely to clay but to sand as well.

And, while many young orchards have doubtless been injured by immoderate applications of rank, green manures, I doubt that any man has ever yet bestowed too much care and expense on the preparation of his ground for fruit trees.—Where ridges or plateaus of fast stone do not forbid, I would say, Turn over the soil to a depth of at least fifteen inches with a large plow and a strong team; then lift and pulverise the subsoil to a depth of not less than nine inches: apply all the wood ashes you can get with one thousand bushels of Marl if you are in a Marl region; if not use instead from thirty to fifty bushels of quick Lime (oyster shell, if that is to be had) with one hundred loads per acre of Swamp Muck which has lain a year on dry upland, baking in the sun and wind, and now you may think of setting your trees. If your soil was rich Western prairie or Middle State garden to begin with, you can dispense with all these fertilizers; yet I doubt that there is an acre of Western prairie that would not be improved by the Lime or (perhaps better still) a smaller quantity of refuse Salt from a packing house or meat retailing grocery. There are not many farms that would not repay the application of five bushels per acre of refuse Salt at twenty-five cents per bushel.

Your trees once set—(and he who sets twenty trees per day as they should be set, with each root in its natural position, and the earth firmly around its trunk, but no higher than as it originally grew, is a faithful, efficient worker.) I would cultivate the land (for the trees' sake,) growing crops successively of Ruta Bagas, Carrots, Beets, and early Potatoes, but no grain whatever, for six or seven years, disturbing the roots of the trees as little as may be, and guarding their trunks from tug, or trace, or whiffletree, by three stakes set firmly in the ground about each tree, not so near it as to preclude constant cultivation with the hoe inside as well as outside of the stakes, so as to let no weed mature in the field. Apply from year to year well rotted compost to the field in quantity sufficient fully to counterbalance the annual abstraction by your crops. Make it a law inflexible and relentless that no animal shall be let into this orchard to forage, or for any purpose whatever but to draw on manures, to till the soil, and to draw away the crops. Thus until the first blossoms begin to appear on the trees; then lay down to grass without grain, unless it be a crop of Rye or Oats to be cut and carried off for feed when not more than half grown, leaving the ground to the young grass. Let the grass be mowed for the next two or three years, and thenceforward devote it to the pasturage of Swine, running over it with a scythe once or twice each Summer to clear it of weeds, and taking out the Swine a few days before beginning to gather the Apples, but putting them back again the day after the harvest is completed. Let the Swine be sufficiently numerous and hungry to eat every Apple that falls within a few hours after it is dropped, and to insure their rooting out every grub or worm that burrows in the earth beneath the trees, ready to spring up and apply himself to mischief at the very season when you could best excuse his absence. I do not commend this as all, or nearly all, that should be done in resistance to the pest of insect ravage; but I begin with the Hog as the orchardist's, readiest, cheapest, most effective ally or servitor in the warfare he is doomed unceasingly to wage against the spoilers of his heritage. I will indicate some further defensive enginery in my next.

INFLUENCE OF FORESTS UPON RAIN.

The London *Athenæum* contains another example of the influence of forests upon the quantity of rain. In several districts of Australia there is a perfect rage for cutting down timber, and where this devastation has been carried out, the quantity of water that falls in a year has greatly diminished; from 37 inches in 1863 it has decreased to 17 inches in 1868. In 1869, from January to July comprising two of the wet months, there only fell 11 inches of rain.

In Victoria the want of water is becoming a serious question, and the Government has been compelled to appoint an Inspector of Forests instructed with the duty of preserving the trees already existing, and to establish nurseries for young sprouts wherever admissible. By a judicious planting and preservation of forests it is anticipated that a decided improvement can be effected in the climate.

The residents of New England, who permit the mountains to be stripped of their trees for the production of charcoal, would do well to consider at what cost to the water power of the States, to the fertility of the farms, to the climate of the country, and to the health of the community, all this momentary gain is attained. While our Governments are planting trees, at great expense, they are cutting them down to obtain a few chaldrons of charcoal.—*Scientific American.*

[Our readers will now remember the valuable Letters on the subject, recently published in this Journal, from Horace Gresley.—Ed. F.]

OREGON VS CALIFORNIA.

We clip the following articles from the *Willamette Farmer*, published at Salem, Oregon, and regret that our neighbor should wish to disparage our State, for if he would examine the subject he would easily learn that although poorly plowed and late planted crops have suffered, our average is large and the total crop of the State *larger than last year.* Our Oregon neighbor thus speaks:

Occasionally a California farmer, who rented a large farm, and sowed hundreds of acres of wheat, investing all he was worth in tools, stock, and provisions, is making his way to Oregon—the drought in California having entirely destroyed his wheat and the investments made in the crop. Some of these unfortunate men have reached Yamhill county, and rented farms. They seem to enjoy the sight of green fields throughout the summer, and the confidence given by the fact that our crops are never cut off by the drouth—that their hard labor here will meet with a just recompense. Oregon, and her great advantages, are becoming known to immigrants.

Another article as follows:

"Said a stranger, "What a beautiful green country you have! When we left California the earth was dry, the grass was burnt up, and wheat in many parts a failure from drouth. Is this always so here? In this beautiful green flourishing region we feel a new life."

"Dear Sir, we see nothing strange in the present appearance of Oregon at this season of the year."

"Coming from California where everything in the country is sere and brown, the appearance of the fields of Oregon is wonderful to us. We are surprised at the change."

"There is nothing new or strange to us Oregonians, in this matter. We always have good crops when we cultivate well."

"I shall take a further look at your country."

Our neighbor should remember the fate of "Haman," and know he cannot build up Oregon by injuring California."

CASTOR BEANS AND BROOM CORN.

Yuba County, this year, will make a fine showing for Broom Corn and Castor Beans. The alluvial bottoms of that section, and the low lands covered by the *wash* from above, is favorable soil for the growth of both these crops.

Home Correspondence.

SNAKES DOWN SOUTH.

SAN FRANCISCO, July 5th, 1870.

COL. WARREN:

Dear Sir—I find that the little reptile from Santa Barbara, handed to me by you for examination is the ANNIELLA PULCHRA, *Gray*, mentioned by me in the list of California Reptiles in Cronise's Natural Wealth of California. As I had never seen the animal nor any description of it at the time I wrote that list, I supposed it to have legs, and did not recognise it in the snake formed reptile you gave me. It was before obtained near San Diego, by Mr A. Schott of the U. S. and Mexican Boundary Survey, and is mentioned in the Report on Reptiles of that collection. Its habits are quite unknown to naturalists, but its structure shows that it is not venomous, and probably useful as a destroyer of insects.

J. G. COOPER, M. D.

SAN DIEGO, CALIFORNIA.

COLONEL WARREN:

Dear Sir—By Wells Fargo & Co., I send you a small box with two small snakes, they are alive, but are harmless. However the Indians are afraid of them owing to their exposed position (the Indian) they say the snake crawls around at night and often they will enter the bodies of the sleeping Indian. I can't find out that they are even injurious then. I also enclose some of the Oak Gum as found on the twigs of the trees. The snakes are beautiful specimens of nature owing to their harmlessness. I send them alive, believing you would much prefer seeing them in motion and their colors brilliant. * * *

[This second lot of snakes were dead when received, but we immersed them in spirits and thus preserved them. They are different in color from the one spoken of by Prof. Cooper—these also will be examined by him.—Ed. F.]

MAGNIFICENT NIGHT BLOOMING CACTUS.

A magnificent exhibition of Blooms has been shown upon a large and grand Cactus, the last and present week at the residence of Col. J. M. White on Pacific St. This Plant is the Cactus *Phyllanthus*, of the Epiphyllum tribe, (Hooker), the plant stands 14 feet high, it has already had eight fine blooms, and eight more buds are seen with promise of more. The fragrance is wonderful and this plant can truly be said to be one of the finest specimen Plants not only on this Coast but equal to any shown in any country. It has been nurtured carefully by the Lady of Col. White, who is a devoted student of Horticulture and Floriculture.

MISS ADELAIDE PHILLIP'S CONCERTS.

The Concerts of Miss Adelaide Phillips may truly be said to be the highest class concerts enjoyed in San Francisco for a long time, the last in Pacific Hall was a real Triumph of true merit.

We are rejoiced to see it announced that this "Queen of Song" is to gratify the public by Two Operas the next week, Monday and Wednesday, at the Maguire Opera House. The mere announcement will fill the House, and our citizens may be sure of a rich and gratifying FEAST OF MUSIC.

CALIFORRIA FLAX, WHEAT CROP, &c.

We have just received a very handsome Sheaf of Fax from E. Provost & Brother, from Denverton. The Sheaf stands 3½ feet high with full heads and heavy seed, a sample of a 200 acre lot.

These Brothers have about 80 acres of Canary Seed doing well, also over *one thousand* acres of Wheat as heavy as was ever seen, promising a most abundant harvest. Thus we have evidence of plenty all around us.

BANCROFT'S NEW BOOKSTORE

Nothing more fully marks the additional progress of a community than the patronage bestowed upon newspapers, printing offices and bookstores. The people of the Pacific Coast may well look with pride upon the magnificent structure which they have enabled the Messrs. Bancroft, of San Francisco, to build. Six floors each 75 by 170 feet—nearly two acres of flooring; all the developments of books and stationary, scientific, law, school, medical, miscellaneous and religious books, paper, blanks and envelopes; a steam printing office, including copper plate and steal engraving, lithographic engraving and printing, monogram cutting and stamping, map making, blank book manufacturing and bookbinding; all this and much more under one roof and one management, it is no where equaled in America.

Messrs. Bancroft & Co., are having good success, running their presses night and day.

A novel feature in Bancroft's new bookstore, Market street, San Francisco, is the balcony nine feet from the floor with iron stairs. This makes available the entire wall which is eighteen feet in height.

Let this country go on as it has commenced, in the encouragement of literature, the fine arts, and education, and future generations will find no where upon the face of the earth a higher type of civilization than upon this Pacific Coast.

SUMMIT HOTEL,

At the Summit of the Sierra Nevada Mountains, on the Central Pacific Railroad.

JAMES CARDWELL, Proprietor.

This Hotel is the FINEST SUMMER RESORT in the State of California. The Climate is cool and pleasant in the Summer months; the Hotel overlooks "Donner Lake," and is about a pleasant drive from the famous Soda Springs.

A FINE LIVERY STABLE

in connection with the Hotel, at which Fast Turn-outs can be had at any time.

The Table will be supplied with all the Delicacies of the Season.

FOR INVALIDS no better resort than this can be found in the World, as the air is always Pure and Invigorating.

Durability---Simplicity---Light Draft!!

THE WORLD MOWER AND REAPER!!!

The Most Perfect Harvesting Machine Ever Built.

MANUFACTURED EXCLUSIVELY BY

E. BALL AND COMPANY, CANTON OHIO.

THIS MACHINE is the Harvest-gathering of twenty years' experience in the manufacture of Agricultural Machinery, and takes rank with the PRINTING PRESS, ENGINE-LATHE, and LOCOMOTIVE, in the qualities of Precision, Staunchness and Durability.

ITS FOUNDATION IS A SINGLE PIECE OF SOLID IRON, of shape to resist all possible strains.

Its gearing is shaped to standard gauge, and each cog cut out of solid iron, with mathematical exactness.

The working parts are permanently fixed, and fully protected from water, dust, grass, and all other causes of disturbance.

By these means we reduce friction to the lowest point—stop the self-destruction common to all rough cast Machines—avoid breakages in harvest—secure easy draft and the same durability which pertains to cut gear in other kinds of machinery.

The "WORLD" has been tested four years, in the hands of the MOST INTELLIGENT AND RELIABLE FARMERS IN THE LAND, all of whom unite in declaring that, comparatively,

"THERE IS NO OTHER HARVESTER"

The "WORLD" is furnished as follows:—

AS A MOWER—TWO SIZES.

COMBINED—MOWER AND REAPER—DROPPER——TWO SIZES.

COMBINED—MOWER AND REAPER—HAND RAKE (SIDE DELIVERY) AND DROPPER—ONE SIZE.

All Combined Machines, have two CUTTER BARS. To those wishing to cut Flax or Hemp, a Knife specially adapted to this kind of work, is furnished with the Combined Machines.

The California Tornado Thresher and Seperator,

BUILT EXPRESSLY FOR THE PACIFIC COAST by

E. BALL AND COMPANY, CANTON, OHIO.

WHILE unequaled in point of Mechanical excellence, this Machine possesses the not less important merit of being built with the view of special adaptation to the needs of this Coast. In point of DURABILITY Capacity and Draft, the "TORNADO" stands, by common consent, at the head of the list of

STANDARD THRESHERS AND SEPERATORS.

It is furnished with the improved CAREY, DOUBLE PINION HORSE POWER, the excellencies of are unquestioned.

For Prices and Complete nformation, address, or Apply to

LINFORTH, KELLOGG & CO.

Importers of Hardware, Agricultural Implements, and Miners Tools.

JACKSON, MICHIGAN, WAGONS.

The Country is full of Eastern and Home-made Wagons, but no wagon except the *Jackson* wagons, has produced proof that they will stand the dry climate of this Coast. Read the following statements:

J. D. Arthur & Son—I have used a Jackson wagon for *ten years*, and consider them the best wagons made.
N. BARBOUR, Suisun.

We have used a *Jackson* wagon for ten years, and recommend them as first class.
SWEETZER & DE LONG, Black Point,

I have used a *Jackson* wagon *four* years, and certify its the best wagon to stand the climate I ever saw.
R. C. HALE.

I have used a *Jackson* wagon *five* years and it is now as good as ever JNO. LOPEZ, Centerville.

I have used a *Jackson* wagon *five years*, (crossed the plains with it) and never expended a dollar for repairs.
H. S. LATHROP, Cherokee, Butte Co.

Having used the *Jackson* wagon for *five years*, I can say has proved to be the best wagon I ever used.
J. M. PATTERSON, Alameda.

I was with a party using 30 Jackson wagons over the plains—for durability no wagon is equal to them
WM. CARLILE, Moore's Mill, Bodega.

Having used the Jackson wagon for years, I can truly say they are the best wagons to stand the dry climate I ever saw.
CHAPIN & JACKSON, San Luis Obispo.

I have used the Jackson wagon to cross the plains and in this country, and consider them to be the best farm wagon made. W. H. FLAGLER, Lower Lake.

I have used a Jackson wagon eight years. I think them superior to any other wagon JOHN FORNEY, Martinez.

I have used a Jackson wagon three years, and consider them the best wagons in use. J. H. PRINCE, Hill's Ferry.

I have in use eight years a Jackson wagon, and must say there can be no better. H. D. ELLERHORST. Haywards.

No better wagon for durability. E. T. WALL, Santa Rosa.

SPECIAL.

A CALIFORNIA MADE WAGON.

In 1869, I had a wagon made to carry fruit at a cost of $450. The *Hub* split so that the spokes had to be taken out and the hub drawn together with clamps. The *Tire* was also *set twice*—all this not the fault of the *Mechanic* but the *Timber*. I have a *Jackson wagon* in use ten years, which I think will last ten years more. N. BARBOUR, Solano Co.

33.23

Home Miscellany.

THE DONNER PARTY.

Of all the waters gathered in the lofty basins of the Sierra Nevada, Donner Lake is, perhaps, the most beautiful in itself, as well as the most picturesque in its surroundings. Girdled with a narrow margin of pebbly beach, encircled by dark and stately forests, and overshadowed by towring mountains—from which the glittering snowfields look eternally down into its crystal chambers—this lake wears a charm almost as weird as that which rests over the awe-inspiring vale of the Yosemite! But there are reminiscences connected with the history of this secluded water calculated to awaken a deeper interest than the scenery that surrounds it. In the glades that skirt its shores, and along the mountain trails that overlook it, there once transpired events so tragic that we would fain discredit the story of their existence; and so dire, that the common woes of life soften into mercies, compared with them.

At the foot of this lake, near the banks of the stream that form its outlet, is a grassy bottom, pleasantly shaded with spruce and pine. Until a few years ago, there were standing here two rude cabins, the remains of which are still to be seen. At an earlier period, the bones of animals, mingled with those of human beings, lay scattered over the ground. The stumps of many trees, cut off at a great height, are still standing here, indicating the depth of the snow at the time they were felled. Hundreds of persons now pass this spot daily—for it is close by the railroad—without knowing that it is the site of "Starvation Camp," where the Donner party suffered so fearfully, and where so many of them perished from hunger, in the fall and winter of 1846.

About the period we are speaking of certain portions of the Western States were extremely subject to malarious and other endemic diseases, causing many settlers to leave and seek homes elsewhere. Hearing that there was, on the shores of the Pacific, a region remarkable for the salubrity of its climate, as well as for the ease with which a subsistence could be obtained there, a number of families—taking with them their teams and herds—set out, in the spring of 1846, for the purpose of emigrating to and settling in a country that promised them exemption from the maladies, as well as the long, cold winters, to which they had before been exposed.

The more advanced of this emigration, having come through on the most direct route, and meeting with no unusual detentions, arrived at their destination in good season. A portion, however, attempting a new route, met with unexpected difficulties and delays, in consequence of which they failed to reach the foot of the Sierra Nevada Mountains until the last of October, instead of arriving there by the first of the month, as had been their intention.

Usually, but little snow falls upon these mountains before the middle of November, but this year seems to have formed an exception to the general rule, and their summits were already white when these desert-worn pilgrims came in sight of them. Finding the trail of those who had preceded them covered up with snow, they engaged the services of an Indian, named Truckee, to pilot them over the mountains. Arriving one evening at the foot of a lake, where they found the three great essentials of a good camping ground—wood, grass, and water—the party halted for the night. Thus far they had encountered but little snow, and did not feel particularly alarmed at their situation. As usual, the cattle were suffered to run at large, and each family camped in or about their own wagons.

Their faithful guide, better acquainted with the weather signs of this treacherous climate, detecting the indications of an approaching storm, urged them to keep up their stock, to gather their wagons close together, and to collect as much dry wood as possible. But the immigrants, either not exactly understanding all that was said to them, or failing to comprehend the full extent of their danger, neglected those timely precautions.

During the night, a heavy storm set in, and by morning the snow was over a foot deep. In the meantime, the cattle had wandered off in various directions, and but few of them were to be found. Concerned now for their safety, these poor people began to build cabins and take other measures for protecting themselves against the severity of the weather. But the snow still continued falling, and in a few days had attained a depth of six or eight feet. For nearly half of the time during the month of November the weather was stormy, the snow on the mountains ultimately reaching a depth of more than twenty feet.

The company thus snow bound consisted of eighty-two persons, thirty-two of whom were females, a large proportion of the whole being children. Their director was George Donnor, a man of some wealth and much worth, who had with him his wife—a woman of education and refinement—together with a number of small children. The men of the party, composed mostly of husbands and fathers, in their anxiety to rescue themselves and those dependent upon them from their perilous situation, made desperate efforts, first to cross the mountains, and, having failed in this, to afterward retrace their steps and make their way back to the plains at their base. But all these endeavors were alike fruitless, ending, after the most persistent attempts, only in the exhaustion, and, in many cases, the complete prostration of those making them. In these efforts and their results, we are furnished an explanation of the anomaly observable here, as well as on many other similar occasions, of the men having been the first to give out and succumb to the hardships to which all seemed equally exposed.

In a short time, every thing in the shape of wholesome food was consumed; and the party having devoured their dogs, the hides of the few cattle they had saved, and even their own shoes and such other leathern articles as they happened to have with them, the idea of dispatching some of their number for food began to take possession of all minds. At this juncture a death fortunately occurred, obviating the necessity for recourse to violence. Other deaths soon after followed, a few preferring to die of starvation, rather than accept the hard alternative of sustaining life by feeding on the flesh of their companions. Others, on the contrary, readily overcame their natural repugnance to this species of food, some partaking of it from the first with an avidity amounting to an apparent relish.

After the lapse of six weeks, the storms having subsided and the weather having the appearance of being settled, a company of eight men and five women, guided by two Indians, set out to cross the mountains into California, that they might apprise the inhabitants of the condition of their friends, and procure assistance. The passage of the mountains, now deeply covered with snow, was not only a laborious, but a dangerous undertaking. No one knew the width of the snow belt, or the distance to the settlements beyond. There might be difficult streams to cross, and hostile tribes of Indians to pass through. The journey, in any event, must be attended with great hardships and peril; but their situation was desperate and without speedy succor, all must inevitably perish. It must, therefore, be undertaken by some one; and as there was now left to the woman a greater amount of courage and strength than to the men, this forlorn hope was in good part made up of them.

Starting, then, with the hopes of all dependent on their success, this party travelling on snow shoes, were able to make only about six or eight miles per day. A week was, therefore, consumed before they had passed the Divide. By this time, the stock of provisions they had taken with them was all gone, and, being overtaken by a severe storm, they were literally covered up with snow for the space of two days, during which time three of the party perished. Weak and dejected, the balance dragged themselves forward through the snow for several days longer, when three more of their number, overcome with hunger, fatigue, and cold, gave out and died. Having now been without a morsel to eat for four days, these wretched people cut the flesh from the bodies of the dead, and having refreshed themselves upon a portion of it and dried the balance for future use, again pushed on. This was their New Year's feast, it now being the first day of January, 1847. Five days later their food was again all gone, and they had only the strings of their snow shoes left to eat. It may seem strange that after having brought themselves to feed upon the remains of their fellows, these sufferers should, with the means at hand for renewing their stock, so soon have found themselves again without food. But it must be remembered that those who perished were already reduced almost to skeletons before death, having but little flesh left on their bones; and that the living, in their enervated condition, were unwilling to burden themselves any further than seemed necessary, each one counting on the probabilities that he might be the next one to yield up his life, when no more food would be needed, or that, if such should be the fate of some one else, then fresh supplies would be furnished as soon as required by the survivors. Thus reasoning, they cut from the bodies of their deceased companions only what seemed the more choice and tender parts, leaving behind the more bulky and unsavory.

Being again reduced to extremities, the Whites came to the conclusion that they would sacrifice their Indian guides to appease their now unbearable pangs of hunger. The latter perceiving their intention, and becoming alarmed, hastily took to flight, and, retreating over the hills, were seen no more.

Death again intervened to save the living from absolute starvation—another of the miserables died; and thus, one after another yielding to the effects of famine and exposure, perished all but three, and two of these, entirely overcome, had lain down to die, when, on the 17th of January, the last of the party, still able to walk, having fallen in with a friendly Indian, was by him conducted to a settlement on Bear River, from whence succour was, the next day, dispatched to the two left behind. Of the thirteen who set out from the immigrants' camp, all but three perished on the way. Had this one who first reached Bear River also given out, or had he failed to fall in with the Indian who piloted him to the habitation of the Whites, every one of them must have perished, as they would, in that event, never have obtained any assistance from California.

Immediately, the news of their terrible situation was sent to New Helvetia, (Sutter's Fort) from whence it was, with all haste, forwarded to San Francisco. From both of these places expeditions were at once fitted out, and, under the direction of experienced mountaineers, sent to their aid. As the rescuing party was obliged to travel on snow shoes for more than sixty miles across the mountains, passing over a steep and rocky country, without any beaten track or sign of a trail they were, of course, unable to carry with them more than a very limited quantity of provisions.—Every step they took they sank deeply into the snow, rendering their progress slow and wearisome; and it was not until the 19th day of February that the first relief party reached the camp of the sufferers. The latter had now been snowed in for more than three and a half months, during the most of which time they had been compelled to subsist upon the flesh of their dead companions.

No language can adequately describe the spectacle that presented itself to the eyes of the brave and humane men who had gone to the deliverance of these piteous beings. On every side the scene was heart sickening and woeful in the extreme; while the hollow eyes and shrunken forms, appeared more like spectres than human beings.—Ghastly skeletons, stripped of flesh, and bodies half devoured, lay strewn around the dismal cabins from which issued a stifling fetor. Not only were their bodies enfeebled and emaciated to the last degree, but with many the very soul had become a desolation. While some welcomed their deliverers with ecstasies of joy, others, gloomy and cadaverous, regarded them with a coldness amounting almost to indifference, they having become not only reconciled to their cannibalistic diet but preferring it to wholesome food when set before them. Monstrous as it may seem, to such an extent had the natural instinct of some of these people become perverted that they pushed aside the flour and bacon tendered them, choosing rather to partake of the horrid feast to which they had so long been accustomed. Parents were seen feeding on the remains of their children, and children on those of their parents. Here a wife was broiling on the coals, the flesh of her husband, and elsewhere a company were making a repast upon the roasted limb of a dead companion. All filial and parental affection seemed dead, the one instinct of self preservation reigning supreme. Rapidly some of those most wretched creatures were being transformed into ghouls and demons, having already lost many of the diviner traits of humanity. Haggard and attenuated, they spoke but little, while their looks and demeanor were wild and unearthly.

Too incredible for belief are the stories told of the ravenous greed exhibited by some of these starving wretches, one of whom is said to have eaten the entire body of a child during the course of a single night; while another insisted on appropriating to his own use the hearts and other viscera of his dead companions. On the other hand, many refused to touch the flesh of those who had perished until the very last, and then partook of it sparingly, and with evident feelings of horror. The different phases which the sufferings of these people exhibited, and the manner in which they met their doom, were peculiar to each. Some, bowing in meek resignation, passed calmly away. Some, their countenances radiant with divine aspirations, died singing songs of triumph and praise. Some bewailed their hard lot with loud lamentations and tears of anguish; while others, shrinking from notice, perished in stolid and gloomy silence. A few raved wildly, reproaching themselves, upbraiding others, or impiously cursing God for their fate. Some, arousing from a dreamy stupor, would talk incoherently of the bountiful tables and the green fields they had seen; or, perhaps, address absent friends as present, in the most tender and affectionate language. In some cases, just before death, the mental faculties would appear to expand and attain to a wonderful exaltation. The things of earth faded softly away, and in their place delectable visions arose in unclouded splendor. All that had perplexed them in years gone by was miraculously explained, and the things of the long forgotten past brought vividly before them. The pangs of hunger seemed already allayed—the soul having become so nearly disembodied as to no longer recognize the wants of its earthly tabernacle.

Unable to take all with them, the rescuing party selected such as were most desirous of going, or seemed to have the strongest claims on their sympathy, and started on their return over the mountains, leaving twenty-nine behind; all of whom, or at least as many as were still found alive, were afterwards taken out by other parties sent in for the purpose, and the first of whom reached the snow beleaguered camp of the sufferers on the 1st day of March. This party, taking with them seventeen of the immigrants, selecting them as had been done before, hastened back with all expedition. A snow storm coming on, they were compelled to leave all but three children on the road, these having been packed out on their shoulders.

As soon as the weather would permit, the company left behind was sent for. Three of their number were dead when the relief party reached them, and the remainder were found sustaining their lives on the flesh of those who had perished. These, together with the remnant before left in camp—excepting three of their number—were now properly fed and cared for; after which they were safely conducted over the mountains into California.

The three persons left behind consisted of Geo. Donner, Captain of the emigration party; his wife Mary, and Louis Keisburgh—the two men being too weak to travel over the mountains.

Of all the incidents connected with these terrific sufferings, the parting of Mrs. Donner with her children is described as having been the most deeply affecting. The last rescuing party had arrived at the camp where she, her husband, and their children were stopping. Mrs. Donner, naturally vigorous, and in the bloom of life, was still strong, and well able to travel, as were also her children. But the husband and father, owing to the exertions he had made to save others, was now so completely prostrated as to be unable to stand, or even sit up; and his deliverers had no means for carrying him. He must therefore, necessarily, be left behind. And now the wife and mother had to choose between remaining, and perishing with him, or accompanying her children to a place of safety and abundance. It was represented to her that but little food could be left for the use of those remaining, and that it would be a long time before any more could be sent in from California. To stay there was to die; while to go, was to abandon one to whom she was bound by the strongest ties of duty and affection, in the hour of his direst extremity.

There was no time to be lost—none for dalliance or delay. The provisions of the relief party were scanty, and the days were short. Already the noon was passed, and the shadows of the great Sierra were beginning to fall over them. The winter climate, in these elevated regions, was fickle, and, even then, the old mountaineer who headed the party discovered in the atmosphere the signs of a gathering storm. They must, therefore up and away. The children must be mounted on the backs of men, and the adults hurried off. It was necessary that this poor woman should make up her mind quickly. Her children clung to her; and her husband counseled her to go. If she remained, it would only be to sacrifice her own life, without being able to save his; and their children would need her care and her presence. She was almost persuaded that it was her duty to go with them. But how could she turn her back on one whom she loved so well, and leave him to die in this gloomy wilderness, helpless and alone!—Was ever human heart tried like this; or any more mortal forced to undergo an ordeal so severe?

Her wifely instincts triumphed—her decision was made; and now the hour for the final seperation with her children had come. Looking tenderly into the eyes of each, she addressed them with the deepest emotion. Embracing them in turn, and bathing them with tears, she kissed them again and again. And then, when she had turned forever away, she could not refrain, in her wild agony, from seizing them again, gazing fondly into their eyes, and kissing them once more. Then she retired to the cheerless cabin where she was so soon to end her earthly labors and her life. The two men, and her now sole remaining companions, had been forced to undergo a similar trial with herself, as Keisburgh had parted with his wife and children under circumstances almost equally distressing.

In a few days after the departure of the rescuing party, Captain Donner died—his heroic wife remaining by his side, soothing and sustaining him to the last.—When dead, she removed his body to another cabin, and there dressed and laid it out with as much care as if it were destined to receive the usual rites of sepulture. How long this noble woman survived her husband is not exactly known, though probably not more than a week at the most, as it is not believed that she partook of any food after his death.

Toward the latter part of April, another small party was sent over from California to see if any of those left behind might perchance still be living. To their surprise they found Keisburgh not only alive, but in a good measure recovered from the effects of the sufferings he had endured. The body of the husband was found in the condition left by his wife. The body of Mrs. Donner had been preserved in the snow by the sole survivor, who had for several weeks been forced to subsist upon portions of it. Affecting to be shocked at the conduct of Keisburgh in this particular, and questioning his right to retain possession of a small sum of money which the Donners had intrusted to his charge for the benefit of their children, should he happen to survive them, this party, instead of being moved with compassion at his misfortunes, proceeded to treat him in a very cruel and unjust manner. On arriving in California, Keisburgh and his friends insisted on the matter being legally investigated, which was accordingly done—resulting in the entire vindication of his motives and conduct.

Of this company of immigrants—numbering eighty-two—thirty-six perished; twenty-six of this number being males, and ten females. They, of course, lost all their property, excepting their money, all of which was carried out by the owners on their persons, or afterward recovered.—[*Overland Monthly* for July.

NEW

AGRICULTURAL BOOKS.

IN PRESENTING THIS LIST, WE BEG TO CALL attention to what has been unusual in this country before, viz: the preparation of a series of books on Agriculture and Horticulture, written by American authors, and adapted to the demands and climate of the United States. The authors who have written these books have selected subjects which they have made their especial study, and in which they have been eminently successful as practical cultivators. And in preparing these books for publication, great care has been taken to ILLUSTRATE WITH EXPLANATORY CUTS in those parts needing such illustration, so that any one can have before him just what is to be done, and how to do it.

It will be our pleasure and it is our intention to offer at the lowest possible price, a complete series of books to cover every subject which can be of interest to those engaged in Agricultural and Horticultural pursuits.

We intend to offer Books of the highest standard and of the finest style of printing and binding, at the lowest possible rates, to induce all who cultivate the soil to possess an excellent library at a reasonable rate.

NEW WORKS WITH ILLUSTRATIONS

THE FIELD AND GARDEN VEGETABLES OF AMERICA. By Fearing Burr. Containing descriptions of all Vegetables, their different species and varieties grown in this country, with full illustrations of them.....Price $5 00

THE GARDEN VEGETABLES OF AMERICA. By Fearing Burr.....Price $3 50

CULTIVATION OF THE GRAPE. By W. C. Strong, of the Nonantum Hill Nurseries, Brighton. A complete guide to Grape Cultivation.....Price $3 00

FLOWERS FOR THE PARLOR AND GARDEN. By Edward Sprague Rand, Jr. Beautifully Illustrated.—Price.....$3 00

THE BOOK OF ROSES. By Francis Parkman. Containing all known Roses, with directions for the cultivation of all varieties worth growing. Beautifully illustrated.....Price $3 00

GARDEN FLOWERS AND HOW TO CULTIVATE THEM. By Edward Sprague Rand. With complete descriptions of all hardy and out-door Plants, Trees and Shrubs.....Price $3 00

THE PARLOR GARDENER. A Treatise on In-door Plants. By Cornelia J. Randolph.....Price $1 00

JUST RECEIVED PER LAST

STEAMER

MANUFACTURERS

AND

IMPORTERS.

ESTABLISHED 1850.

HAVE RE-OPENED AT THE NEW AND SPACIOUS BUILDINGS,

No. 319 and 321 PINE STREET,

Where will be found the most EXTENSIVE AND VARIED ASSORTMENT OF GOODS in the above lines ever before exhibited for sale on the PACIFIC COAST. 31-13

NEW

Russian, Turkish & Roman BATH HOUSE,

No. 524 TO 528 PACIFIC STREET.

DR. ZEILE INFORMS THE PUBLIC THAT his New Bath House is now open for the accommodation of patrons. Neither pains nor expense has been spared to make this the best and most commodious establishment of the kind, either in Europe or America.

Convenient and separate apartments are afforded for the administration of bathing by Steam, by Hot Air, and by Plain or Medicinal Waters.

Trained and polite attendants will use their best efforts to give complete satisfaction.

DR. ZEILE has also attached to his bathing establishment a few handsomely furnished Suites of Rooms, where he will receive and entertain patients for treatment, who are not affected with any contagious or infectious disease. To secure this accommodation it will be always necessary for engagements to be made in advance of the arrival of the patient.

Open daily from 7 A. M. to 9 P. M. On Sundays from 7 A. M. to 2 P. M. 31-13

WHO MAKES SCRAP BOOKS

'Tis said "In the making of Books there is no End," and we know there are many persons who are always interested in making SCRAP BOOKS, now to all such persons, we have some very important information which will benefit them.

It will be seen by our advertisement of OLD NEWSPAPERS FOR SALE that we can furnish just the *right material for Scrap Books*, for we have in this collection of Old Newspapers, a series of papers of 10 to 16 years and from every State in the Union, and also European papers; also select scientific and literary papers, Journals of all kinds. In these papers will be found much of the best Poetry of the age, also Stories, Anecdotes, Receipts &c., all very valuable, and these we shall offer at the low rate of $2.50 to $3, per hundred. Many of these are 12, 16 and 20 page pamphlets and magazines and other periodicals, those who want these collections will address

EDITOR CAL. FARMER.

PACIFIC ANATOMICAL MUSEUM,

....AND....

GALLERY OF NATURAL HISTORY AND SCIENCE

Eureka Theatre, Montgomery Street.

This truly elaborate and magnificent collection of all the strange, wonderful and curious in SCIENCE, NATURAL HISTORY, AND ART, is now open to the public.

Extensive embellishments and improvements have been made. The additions will include an immense collection in BOTANY, ICTHYOLOGY, and ENTOMOLOGY.

COMPARATIVE, FLORAL, AND BOTANICAL ANATOMY will be largely illustrated, and form a leading feature of the institution. Every exertion has been used to render this superb collection the most INSTRUCTIVE, AGREEABLE, and USEFUL IN THE WORLD.

INSECT AND ANIMAL LIFE will be beautifully displayed and the celebrated Du Chaillu GORRILLA, which was exhibited ALIVE in Paris, has been added to the already vast collection of HUMAN AND COMPARATIVE ANATOMY.

Open daily from 9 A. M. to 5 and 7 to 9 P. M. Sundays from 1 to 5 P. M.

Preserve Your Sight!

BRAZILIAN PEBBLES!

SPECTACLES AND EYE-GLASSES

Mounted in fine gold, Steel and Shell Frames, accurately adapted to the various conditions of sight. Those in need of Spectacles will find my assortment the most extensive, and receive the attention of one skilled in his profession.

Miscellany.

THE PRESS, A POWER.

[We give the following words uttered by Hon. Thomas Steere, at the Anniversary Banquett of the Rhode Island Society for the promotion of Manufactures, held at the City Hall, Providence, R. I., at its Fifth Annual Meeting, in response to the sentiment.

THE PRESS.

It would be well if the *Press* of this State would abide by the counsel of this able advocate of the Press.]

Said the First Napoleon: "A journalist is a grumbler, a censurer, and a giver of advice, a regent of sovereigns, a tutor of nations. Four hostile newspapers are more to be feared than a thousand bayonets." Nor does the parallel fail with us.—Only recently we have seen one newspaper overhaul the theology of a Governor of a sovereign State, and another, in our city, insist upon it—against all official tradition and privilege—that the Mayor should not occupy "the Stebbins platform." The newspaper is an institution of our age, at once a mark and promoter of progress; an element of strength which we can no more dispense with, in this nineteenth century, than we can with steam or the electric telegraph. In its articles, in its best estate, are to be found sound sense, philosophy, genuine principle, true statesmanship and as much wit and humor as is permissable in a nation which, owing to its Anglo Saxon origin, takes its pleasure solemnly. We are not satisfied in these days with mere personal communion, and the knowledge of neighborhood affairs; we desire contact with the mind of the world, and information respecting all matters of science, art, manufactures, politics and theology. We grumble at our paper, laugh at it, dictate to it—do everything but do without it. And he must be a superficial reader, indeed, who does not perceive that the press—all its imperfections crudities and waywardness granted—is continually carrying the people forward towards a higher appreciation of, and deeper love for, truth; a broader conception, and more honest acknowledgment of others' rights, and universal justice; and in the cultivation and advocacy of refined manners and pure morals, public virtues and honest government.

Milton, quoting the brilliant Greek, declares—

"That is true liberty, when free born men,
Having to advise the public, may speak free;
Which, he who can, and will, deserves high praise,
Who neither can, nor will, may hold his peace."

The power of the press acknowledged, there arises, *ipso facto*, responsibility. He who can advise the public is to speak freely—and honestly. This thought lifts us above, and out of the paralyzing influence of mere partizanship, the advocacy of clique or personal interests, the trivialities of the moment, and engages us to a serious and conscientious survey of the duty of the journalist. And we shall enter upon the inquiry with greater hope of success if we remember this fundamental fact; in this country, that *imperium in imperio* which in all times is vested somewhere, which in ancient times was embodied in the censorship, is found in, and exercised by, all public opinion—and public opinion is the child of the press. The editor deals with and discusses every interest of society, and not seldom criticises individuals; he ought, therefore, to be intelligent, and it is imperatively necessary that he should be decorous. Judgment he ought to possess, but civility he must. He should be well read, and genial withal; clear in his convictions, yet liberal in his feelings; dignified and sound in his argument, and graceful in his rhetoric; a close thinker, and a ready writer; an honest man, and a patriot. Penetrating, by his labors, the counting room, the workshop, the school and the family, he owes it to himself, to his readers, to society at large, and good government, that he discharge his duty in a spirit at once catholic and enlightened; that he feels always that, inasmuch as his persistence, aside from his ability, carries weight, he should ever be guided by right reason, a purpose and a lofty principle. Just so far forth as he is read, does he exert for good or evil, influence; and it is the aggregate of intellect and virtue which gives the age, its form and pressure. In the words of the late Justice Story, let us pray that—

"Here shall the Press, the People's rights maintain,
Unawed by influence and unbribed by gain;
Here patriot Truth, her glorious precepts draw,
Pledged to Religion, Liberty and Law."

We deeply regret as we take up our daily Journals, the *Alta*, *Bulletin*, and *Call*, to notice the continual wrangling between them, and upon matters which the public are not interested, and are very much disgusted to notice. Far better for these Journals that claim to be respectable, to give the same space in their columns to matters of Home Interests and industries. This would interest their readers to a much greater extent.—[Ed. F.

EXTRA NUMBERS.

We make it one of our plans in the dissemination of such agricultural information as we deem of particular importance and value, to issue and send out hundreds or thousands of EXTRA COPIES of our Journal, we send them broadcast, freighted as we hope with seeds of truth that may accomplish great good.

Of such editions we mail copies to active, prominent and influential men everywhere, and to Postmasters, ask them each and all to *read* and pass to others that the greatest good may be done.

The present number of the FARMER contains much that we trust will prove of value to the reader, and we hope many who read will co-operate with us in our work, and extend the influence of our Journal.

Those persons who wish to give correct views of our State and its resources, a correct market report of all the products, should send the FARMER regularly to their friends.

Miscellaneous.

IMPORTANT
....TO....
Nurserymen, Gardeners and Amateur Florists.

We beg to announce the arrival of the choicest and best assorted collection of

Rare Seeds

ever received on this Coast. They have been selected with the greatest care, from the first houses in Europe, and are comprised of

EVERGREEN, AND DECIDUOUS TREES AND SHRUBS, RARE AND BEAUTIFUL PERENNIALS, BIENNIALS, ANNUALS, ETC,

Also, new and choice Vegetables; the assortment is worthy the attention of all who admire the beautiful; and also the particular attention of gardeners who are anxious to secure something rare and new in the Vegetable kingdom.

We shall send them out in small parcels or individual packets, so that many may have the chance of securing the collection. Orders executed in rotation, and carefully packed for mailing any distance.

Persons remitting us Five Dollars, will have collections of Seeds sent them, worth intrinsically double the amount.

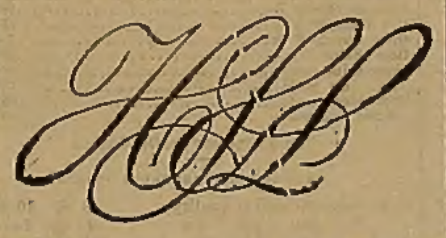
HUCKS & LAMBERTS'
CELEBRATED PATENT
H.&L.
AXLE-GREASE



This Extraordinary Lubricating Compound

Is produced by a chemical combination of suitable oily substances, purified by distillation, and

EFFECTUALLY

Freed from the resinous or pitchy matter which attaches to all oils, more or less, in their natural or unrefined state. In operation, the PATENT GREASE works free from Comb, or Gum:

PREVENTS

Friction by keeping the heaviest bearings in a soft oily state to the last; and, as its consistency is not altered by exposure to the hottest sun or coldest frost, (its liquifying point being 200 degrees) it follows that, on axles which have a tendency to become hot from too heavy abrasion, etc., the anti-friction will adhere to and keep them cool, when other substances would run off and become dry; thus the evil known as

"Firing of Wheels,"

Is by its use effectually prevented.

The Proprietors will guarantee one application of their PATENT GREASE to carry the heaviest loaded team from 300 to 500 miles without requiring to be re-greased on the road.

☞ N. B.—We respectfully caution our friends to ask for HUCKS & LAMBERT'S AXLE-GREASE, as there are several spurious imitations in the market, and see that their trade mark,

H.&L.

Is on the red cover of the packages

Railroad Lands.

CENTRAL PACIFIC RAILROAD,
LAND DEPARTMENT.

Sacramento, March 1st, 1867.

The following statement is made for the information of those who desire to purchase Lands from said Company:

1st. Congress has granted to the Company, all the alternate sections of the public lands designated by odd numbers, within a distance of 20 miles on each side of the railroad;—excepting lands to which a pre-emption or homestead claim had attached prior to the 12th of September, 1862, and excepting lands reserved by the United States as mineral.

2d. The Company has no interest in even sections. To constitute a valid pre-emption or homestead claim within the above exception, the party must have resided on the land prior to September 12th, 1862, and continuously since that time. He must also on that day have been over twenty-one years of age and be the head of a family and have filed his claim in the United States Land Office within the time required by law. If he has not these requisites, or has neglected to file, he will have to buy of the Railroad Company.

3d. All persons who desire to purchase lands from the Railroad Company, including settlers, pre emptors, and other claimants, should make application to the Land Agent, B. B. Redding, at the Land Office of the Company, in Sacramento, either personally or by letter, describing the land by legal subdivisions. This application will be filed and the party will be allowed three months to complete the purchase, and during this time the land will not be sold to another without giving such applicant thirty days previous notice. If the purchase is not completed within three months, the land will be open to purchase by others.

4th. Persons who have valid pre-emption or homestead claims to any tract on an odd numbered section, can purchase the same from the Railroad Company at the Government price of $1.25 per acre in greenbacks, and upon the usual credit of five years if they so desire, by filing an abandonment of their claim in the U. S. Land Office, blanks for which will be furnished by the Land Agent of the Company. Such purchase from the Company has these advantages over a purchase from the Government: The party can leave the land if necessary—he can sell or mortgage it—he is saved the payment of lawyers' fees and expenses of witnesses to go to the Land Office to "prove up" his claim—he can get his title perfected in less time—and he can buy on credit at a low rate of interest.

5th. Actual occupants of lands belonging to the Company, will generally have a preference in the purchase at the regular price. No addition to the price is made where there are improvements on the land made by the settler. Where there are conflicting claimants who apply to purchase, an adjudication of their respective claims will be made by the Land Agent, upon due notice given to both parties.

6th. No lands are sold by the Company or the Government, until after they have been surveyed and the plats returned to the Land Office.

7th. The Company sells ordinary agricultural lands at $2 50 per acre, in gold (except sales to pre-emptors as above). Timber lands, lands in the immediate vicinity of the railroad, and tracts having special value above ordinary farming lands, will be sold at prices and on terms fixed by the Board of Directors.

8th. Persons desiring to do so can buy on a credit of five years by paying twenty per cent. of the price down, and interest annually in advance on the remainder at ten per cent. per annum. Thus a purchaser of one hundred and sixty acres at $2 50, which amounts to four hundred dollars, will pay twenty per cent., or eighty dollars, with interest on three hundred and twenty dollars, which is thirty-two dollars—in all one hundred and twelve dollars, paying each year thereafter thirty-two dollars interest, and the three hundred and twenty dollars at the end of five years. his three hundred and twenty dollars can be paid at any time within the five years, but not by installments, and the purchaser will then be immediately entitled to a deed

9th. Applications to purchase lands can be filed in the Land Office of the Company at any time after the same have been surveyed by the Government; but no applications will be acted upon until three months after the maps have been filed in the United States Land Office. Occupants of the railroad lands who desire to purchase should therefore be prompt in filing their applications in the office of the Company within this time. Blank applications will be furnished to all who desire to purchase. No sales will be made except by legal subdivisions according to Government surveys. Purchasers can buy as large an amount of land as they may wish.

10th. No sales are made by the Company until the land is listed over to it by United States Land Officers. Purchasers are thus assured that the title they obtain is perfect.

B. B. REDDING,
Land Agent C. P. R. R. Co., Sacramento.

THE LAWS OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscription.

2. If subscribers wish their papers discontinued, publishers may continue to send them until all charges are paid.

3. If subscribers *neglect* or *refuse* to take their papers from the office or place to which they are sent, they are *held responsible* until they *settle* their bills and give notice to discontinue them.

4. If subscribers move to other places without informing the publisher, and the paper is sent to the former direction, they are held responsible.—Notice should always be given of removal.

5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is *prima facie* evidence of intentional fraud.

Postmasters would oblige by a strict fulfillment of the regulations requiring them to notify publishers, once in three months, of papers not taken from their office by subscribers.

Under the law of Congress, papers are not charged postage in the county in which they are published.

Produce Markets.

Wholesale Produce Report.

This represents the prices paid by the dealer to the producer on the wharf or landing places.

Corrected Weekly, by Editor Farmer.]

San Francisco, July 7.

The business season with Grain has begun in earnest, the price is good, demand fair, ships loading and plenty of grain everywhere. Does any person think our crops will be light, let them take a trip over any of our Rail Roads and they will see grain enough at all the Depots—they would think, to supply the world.

California has an abundant harvest! The market is not brisk, but steady, and the way to make it brisk to our farmers will be to sell.

Barley and Oats coming in well,—other produce good and plenty.

We can say with truth that when considered as a whole, California never had a better season.

REASONS WHY EVERY FARMER AND STOCK-RAISER SHOULD TAKE THE "CALIFORNIA FARMER."

1st. Every Farmer and Stock-raiser should be a reader of the Journal connected with the interests of his own profession in his own State

2d. Every such person should give his sanction and support, generously and voluntarily to a Journal that advances his own particular business in his own State.

3d. Every such person is *benefitted* by the publication of such a Journal, and is in justice bound to reciprocate such labors.

4th. No person engaged in these employments can be without such a Journal without the loss of many times its cost annually.

5th. The Farmer and the Stock-raiser will always be better advised of the markets, and that kind of information so important to his interests by constant access to a "Home Journal."

6th. The *California Farmer* has faithfully advocated the best interests of the Farmer and Stock-raiser forsixteen years steadily and is the *only Agricultural Journal in California.*

7th. The *California Farmer* contains the most important information relative to these interests in every branch of Agricultural science.

8th. The *California Farmer* contains the announcement of all New Seeds, Grains, Grasses, etc., together with all New Implements that will advance the cause of the cultivators of the soil.

9th. The *California Farmer* contains the arrival and introduction of all the best Stock of all kinds as soon as known, together with the full Market Reports of all the interests appertaining to Agriculture.

10th. The *California Farmer* is now the *only paper* on the Pacific Coast that is continued by its *original Editor and proprietor*, commencing at the time this Journal commenced; and having been constant in its efforts for the good of these interests, deserves the cheerful patronage of all engaged in industrial pursuits, and of all good men.

Send Us Samples.

We desire to procure *Samples* of every variety of Grain, Grass, and every Cereal as well as *Samples of New Products*, and for these we shall be ready to reciprocate in any way desired. We will, pay for them, or bestow a full equivalent in some *new Seed or Plants* that may be desired.

Natual History.

We desire specimens in Natural History Insects, Flies, Frogs, Toads, Snakes, Turtles, etc., preserved in spirits, or dried, and for these or any curiosity, will make due return. Send by Wells, Fargo and Co., to our Office.

AGENTS! READ THIS!

WE WILL PAY AGENTS A SALARY OF $30 per week and expenses, or allow a commission to sell our new and wonderful inventions Address M. WAGNER & CO., Marshall Mich. 33,16.

COMMISSION SALES-ROOM —AND— Purchasing Agency.

Having had the experience of over thirty years in dealing in Trees, Plants, Seeds, and Agricultural Implements, we feel that we are fully competent by our experience in purchasing such articles to make a saving of from fifteen to twenty-five per cent for the great mass of purchasers. We will therefore offer to make purchases for all who wish our services, of any of those articles named, or for any articles of merchandise for our Farmers or Ranchmen, and ship the same as they shall direct.

In order that we may do their business in the most satisfactory way for them and ourselves, we shall wish that all who send orders should be as explicit as possible as to their wants—describing as minutely as they can; and where they desire our judgement we will do our best to suit them.

Our charge will be Five per cent, together with the cost of packing, freight, drayage, etc. Orders should inclose satisfactory references or the Cash; or bills could be sent by Express, to be collected on delivery

We shall be happy to attend to the purchase and shipment of Trees, Seeds, Plants, etc., as this is our especial business and we know we can satisfy all who may entrust us with their favors.

☞ We particularly call attention to the

New Agricultural Implements

which we announce in our columns, and which we have the exclusive sale for this Coast.

We also call attention to the

NEW GATE.

A most valuable invention, particularly to Farmers and Stock Raisers. County Rights for sale.

☞ Every kind of Implement will be purchased to order and shipped promptly, thus saving the expense, and loss of time of a visit to the city.

The following are the kind of Goods imported or consigned to us for sale and which can be offered on the most favorable terms:

Grass Seed.

Permanent Grasses for Lawns or Pastures.

We would call the attention of all those who are desirous of having a beautiful Lawn, or a rich, luxurious pasture, to the importance of securing their seeds from a reliable source, as much depends upon having pure and clean seeds. The grass seeds we are now sending out have been selected with the greatest care, therefore we can recommend them with the utmost confidence In ordering Grass Seeds, please state the nature of the soil and the extent of land to be sown.

FINEST MIXED LAWN GRASSES,
FINEST MIXED GRASSES FOR
PERMANENT PASTURES.

FINEST MIXED GRASSES FOR SHEEP-WALKS
FINEST MIXED GRASSES
